

METAL DETECTION AND MILLIMETER WAVE SCREENING PARAGON + QPS201

COMBINED DETECTION

GARRETT®

ROHDE & SCHWARZ
Make ideas real

WHAT MAKES THIS INTEGRATION SO POWERFUL?

PARAGON:

- High sensitivity detection for the smallest threats
- Immunity to body cavity concealment
- Detects ferrous and non-ferrous metallic objects

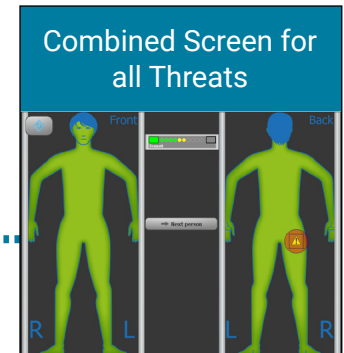

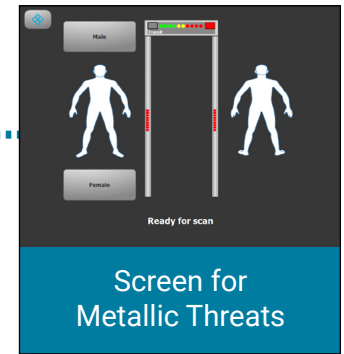

QPS201:

- Detection of all types of materials
- Detection of metallic granulates, powders and liquids
- Centralised data acquisition for statistics, log and performance management

PARAGON + QPS201

- Multi-sensor screening
- Integrated display with accurate alarm spot indication, reduce uncomfortable pat down

HOW IT WORKS

- Full-spectrum detection - combines best of both technologies
- Zero health-risk screening

IDEALLY SUITED FOR HIGH-RISK SCENARIOS

The advanced Garrett *Paragon* walk-through metal detector accurately identifies extremely small or internally concealed metallic threats. To complete detection in high security scenarios, the R&S QPS201 security scanner detects all types of objects regardless of material using cutting-edge millimeter wave technology, providing an additional layer of security against nonmetallic threats.
