26	<i>RScmwWS - WCDMA Signaling (3.7.220)</i>	169
27	<i>RScmwWNB – WCDMA eNodeB Measurement (3.7.220)</i>	183
28	<i>RScmwFM - FM Stereo Radio Measurements (3.0.120)</i>	184
29	<i>RScmwDAU - Data Application Unit (3.7.510)</i>	185
30	<i>RScmwWXM - WiMAX Measurement (3.2.100).....</i>	192
31	<i>RScmwWXS - WiMAX Signaling (3.2.100)</i>	194

1 Installation of the LabVIEW driver

Before you start the installer, please close your LabVIEW application.

1.1 Installation on a Windows machine

The driver is distributed as a WinZip self-extracting executable file. Installer supported operation systems: WinXP, Win7, Win8, Win10.

Preconditions:

- LabVIEW 2015 or newer installed
- Any VISA installed – R&S VISA 5.12.4 or newer / NI VISA 5.16 or newer

When you start the driver WinZip installer, the following steps are being performed:

1. Unpacking of the driver's **instr.lib** and **user.lib** directories content as well as the **Installer.vi** into a temporary folder: **C:\temp\rscmwXXX-lv-x.x.x**
The driver is compiled in LabVIEW 2015 64-bit. From there you can copy to another location or run the **Installer.vi** manually later. The content of the temporary folder is not deleted after the installation is finished. Starting the same installation again will overwrite the data in this temporary folder.
2. After unpacking, the **Installer.vi** is automatically started in the last opened version of LabVIEW.
In case you have more than one version of LabVIEW installed on your machine, make sure that the last opened LabVIEW version is the one in which you want to use the driver. If that's not the case, cancel the installation at this point, open and close your desired LabVIEW version and run the installer again. You can have the driver installed parallel for more LabVIEW versions by repeating the installation process for each desired version.
3. On the installer options page you have a choice to uncheck the **Mass-compiling** option (**not recommended, because of the driver's performance penalty as well as VIs opening times**) and also you can change the location of the **instr.lib** part of the driver. **user.lib** part must be placed in the default location, otherwise the Express VI configuration will not function.
On this page you also see the actual LabVIEW version.
Hitting **Next** button will first delete the old driver (if it existed), copy the new driver and mass-compile it.
4. The LabVIEW is closed and after starting it again the driver is ready for use.

1.2 Installation on a non-Windows machine

In case you would like to install the driver on a non-Windows machine, use a Windows machine to start the driver's WinZip self-extracting executable file. **This machine doesn't need to have LabVIEW installed.**

After the **Step 1** from the previous chapter is finished, copy the content of the temporary folder to your target machine and start the **Installer.vi** manually. From that point onwards, the installation process is the same as described in the previous chapter Steps 2, 3, and 4.

2 RScmw - Base unit (3.7.400)

27 RScmwWNB – WCDMA eNodeB Measurement (3.7.220)

rscmwinm driver for WCDMA eNodeB Measurement		
Driver history for LabVIEW driver		
Instruments: CMW500, CMW100		
Revision	Date	Note
3.7.220	06/2019	<ul style="list-style-type: none">* Update for firmware version 3.7.22* New attributes/VIs:<ul style="list-style-type: none">- RSCMWWNB_ATTR_MIXER_LEVEL_OFFSET- rscmwwnb Configure Mixer Level Offset.vi
3.7.100	01/2018	<ul style="list-style-type: none">* Support for firmware 3.7.10* Initial release

28 RScmwFM - FM Stereo Radio Measurements (3.0.120)

rscmwfm driver for FM Stereo Radio Measurements		
Driver history for LabVIEW driver		
Instruments: CMW500, CMW280		
Revision	Date	Note
3.0.120	06/2012	Modifications: * Update for firmware version 3.0.12
2.1.101	02/2012	Modifications: - Fixed co-existence with other core based drivers
2.1.100	07/2011	Release for CMW firmware version 2.1.10.x * Added features - RDS deviation measuremet results * Modified functions - changed command, results for RDS deviation added: - rscmwfm_ReadMEvalMeasRFModulation - rscmwfm_FetchMEvalMeasRFModulation - rscmwfm_QueryMEvalMeasRFModulationLimitCheckResults - rscmwfm_ReadMEvalMeasRFModulationStandardDeviation - rscmwfm_FetchMEvalMeasRFModulationStandardDeviation - rscmwfm_QueryMEvalMeasRFModulationLimitCheckResultsStandardDeviation - rscmwfm_ConfigureMEvalLimitsRFModulation
2.0.110	02/2011	Release for CMW firmware version 2.0.11.xx * Added functions/attributes - rscmwfm_Query Signal Routing.vi - rscmwfm_Configure Multi Eval Measurement Timeout.vi * Modified functions - rscmwfm_Configure Signal Routing.vi - added new connectors - rscmwfm_Read Multi Eval Measurement AF.vi - changed command, removed MINimum - rscmwfm_Fetch Multi Eval Measurement AF.vi - changed command, removed MINimum - rscmwfm_Query Multi Eval Measurement AF Limit Check Results.vi - changed command, removed MINimum
1.0.152	08/2010	Release for CMW firmware version 1.0.15.20 Initial revision

29 RScmwDAU - Data Application Unit (3.7.510)

rscmwdau driver for Data Application Unit		
Driver history for LabVIEW driver		
Instruments: CMW500		
Revision	Date	Note

1.0.150	12/2009	<p>Release for CMW firmware version 1.0.15</p> <p>Added functions/attributes</p> <ul style="list-style-type: none"> - Second RF Channel and MIMO support - Pulse Frame Trigger - First Zone definition - Ranging Response Settings - PER CRC Settings - rscmwwxs Configure AWGN Signal.vi - rscmwwxs Initiate Next Connection Step.vi - rscmwwxs Configure Second Zone Uplink Symbol Offset.vi - rscmwwxs Configure IPv4 DL subframe.vi <p>Modified VIs</p> <ul style="list-style-type: none"> - rscmwwxs Configure Signal Init.vi - added new parameters - rscmwwxs Configure MS Power Control.vi - added new parameters
1.0.100	07/2009	<p>Release for CMW firmware version 1.0.10.1</p> <p>* Removed VIs/Attributes</p> <ul style="list-style-type: none"> - RSCMWWXS_ATTR_PER_SUBCHANNEL_OFFSET - RSCMWWXS_ATTR_PER_SYMBOL_OFFSET - RSCMWWXS_ATTR_PER_NUMBER_OF_SUBCHANNELS - RSCMWWXS_ATTR_PER_NUMBER_OF_SYMBOLS - RSCMWWXS_ATTR_PER_MODULATION_CODING_RATE - rscmwwxs Configure PER Data Burst.vi <p>* Added VIs/attributes</p> <ul style="list-style-type: none"> - Downlink Traffic subsystem - Second Zone Definition subsystem (with CMW-KS701 only) - Trigger subsystem - IPv4 Settings subsystem - Connection Status subsystem - RSCMWWXS_ATTR_UL_HARQ_STATE - RSCMWWXS_ATTR_UL_HARQ_ACK_DELAY - rscmwwxs Configure Downlink Burst DLFT Power Boost.vi <p>* Modified VIs/attributes</p> <ul style="list-style-type: none"> - RSCMWWXS_ATTR_INPUT_EXTERNAL_ATTENUTATION - changed command - RSCMWWXS_ATTR_SIGNAL_INIT_FFT_SIZE - changed to read only - RSCMWWXS_ATTR_POWER_CONTROL_GAIN_VALUE - changed command - RSCMWWXS_ATTR_GENERATOR_TX_POWER_DATA_CARRIER - changed command - RSCMWWXS_ATTR_PER_DATA_INTERVAL - changed command - rscmwwxs Configure Uplink Traffic Burst.vi - new MCRs - RSCMWWXS_ATTR_UL_TRAFFIC_BURST_MODULATION_CODING_RATE - new MCRs - rscmwwxs Configure PER Settings.vi - removed Modulation Coding Rate
1.0.40	08/2008	<p>Release for CMW firmware version 1.0.6</p> <p>Initial revision</p>

About Rohde & Schwarz

Rohde & Schwarz is an independent group of companies specializing in electronics. It is a leading supplier of solutions in the fields of test and measurement, broadcasting, radiomonitoring and radiolocation, as well as secure communications. Established more than 80 years ago, Rohde & Schwarz has a global presence and a dedicated service network in over 70 countries. Company headquarters are in Munich, Germany.
