1 Welcome to the LoRa option

The R&S SMW-K131 is a firmware application that adds functionality to generate signals in accordance with LoRa modulation.

The R&S SMW-K131 features

- Generation of LoRa up-/downlink signals
- Generation of waveforms for LoRa up-/downlink signals
- Frame configuration including modulation, coding and data configuration
- Impairing the output signal:
 - Adding symbol timing error and frequency offset
 - Applying a frequency drift to the carrier frequency of the output signal

This user manual contains a description of the functionality that the application provides, including remote control operation.

All functions not discussed in this manual are the same as in the base unit and are described in the R&S SMW user manual. The latest version is available at:

www.rohde-schwarz.com/manual/SMW200A

Installation

You can find detailed installation instructions in the delivery of the option or in the R&S SMW service manual.

1.1 Accessing the LoRa dialog

To open the dialog with LoRa settings

- ▶ In the block diagram of the R&S SMW, select "Baseband > LoRa".
A dialog box opens that displays the provided general settings.

The signal generation is not started immediately. To start signal generation with the default settings, select "State > On".

1.2 What's new

This manual describes firmware version FW 5.30.047.xx and later of the R&S®SMW200A.

Compared to the previous version, it provides the new features listed below:

- Time-based triggering, see "[Time Based Trigger](#)" on page 25 and "[Trigger Time](#)" on page 25.

- Editorial changes

1.3 Documentation overview

This section provides an overview of the R&S SMW user documentation. Unless specified otherwise, you find the documents at:

www.rohde-schwarz.com/manual/smw200a

1.3.1 Getting started manual

Introduces the R&S SMW and describes how to set up and start working with the product. Includes basic operations, typical measurement examples, and general information, e.g. safety instructions, etc. A printed version is delivered with the instrument.

1.3.2 User manuals and help

Separate manuals for the base unit and the software options are provided for download:

- Base unit manual
Contains the description of all instrument modes and functions. It also provides an introduction to remote control, a complete description of the remote control commands with programming examples, and information on maintenance, instrument interfaces and error messages. Includes the contents of the getting started manual.
- Software option manual
Contains the description of the specific functions of an option. Basic information on operating the R&S SMW is not included.

The contents of the user manuals are available as help in the R&S SMW. The help offers quick, context-sensitive access to the complete information for the base unit and the software options.

All user manuals are also available for download or for immediate display on the Internet.

1.3.3 Tutorials

The R&S SMW provides interactive examples and demonstrations on operating the instrument in form of tutorials. A set of tutorials is available directly on the instrument.

1.3.4 Service manual

Describes the performance test for checking compliance with rated specifications, firmware update, troubleshooting, adjustments, installing options and maintenance.

The service manual is available for registered users on the global Rohde & Schwarz information system (GLORIS):

<https://gloris.rohde-schwarz.com>

1.3.5 Instrument security procedures

Deals with security issues when working with the R&S SMW in secure areas. It is available for download on the internet.

1.3.6 Printed safety instructions

Provides safety information in many languages. The printed document is delivered with the product.

1.3.7 Data sheets and brochures

The data sheet contains the technical specifications of the R&S SMW. It also lists the options and their order numbers and optional accessories.

The brochure provides an overview of the instrument and deals with the specific characteristics.

See www.rohde-schwarz.com/brochure-datasheet/smw200a

1.3.8 Release notes and open source acknowledgment (OSA)

The release notes list new features, improvements and known issues of the current firmware version, and describe the firmware installation.

The software makes use of several valuable open source software packages. An open source acknowledgment document provides verbatim license texts of the used open source software.

See www.rohde-schwarz.com/firmware/smw200a

1.3.9 Application notes, application cards, white papers, etc.

These documents deal with special applications or background information on particular topics.

See www.rohde-schwarz.com/application/smw200a and www.rohde-schwarz.com/manual/smw200a

1.3.10 Videos

Find various videos on Rohde & Schwarz products and test and measurement topics on YouTube: <https://www.youtube.com/@RohdeundSchwarz>

On the menu bar, search for your product to find related videos.

Figure 1-1: Product search on YouTube

1.4 Scope

Tasks (in manual or remote operation) that are also performed in the base unit in the same way are not described here.

In particular, it includes:

- Managing settings and data lists, like saving and loading settings, creating and accessing data lists, or accessing files in a particular directory.
- Information on regular trigger, marker and clock signals and filter settings, if appropriate.
- General instrument configuration, such as checking the system configuration, configuring networks and remote operation
- Using the common status registers

For a description of such tasks, see the R&S SMW user manual.

1.5 Notes on screenshots

When describing the functions of the product, we use sample screenshots. These screenshots are meant to illustrate as many as possible of the provided functions and possible interdependencies between parameters. The shown values may not represent realistic usage scenarios.

The screenshots usually show a fully equipped product, that is: with all options installed. Thus, some functions shown in the screenshots may not be available in your particular product configuration.

2 About the LoRa option

2.1 Required options

The basic equipment layout for generating LoRa signals includes the options:

- Option Standard or Wideband Baseband Generator (R&S SMW-B10/-B9) per signal path
- Option Baseband main module, one/two I/Q paths to RF (R&S SMW-B13/-B13T) or Option Wideband baseband main module two I/Q paths to RF (R&S SMW-B13XT)
- Option LoRa (R&S SMW-K131) per signal path
- Frequency option (e.g. R&S SMW-B1003)

You can generate signals via play-back of waveform files at the signal generator. To create the waveform file using R&S WinIQSIM2, you do not need a specific option.

To play back the waveform file at the signal generator, you have two options:

- Install the R&S WinIQSIM2 option of the digital standard, e.g. R&S SMW-K255 for playing LTE waveforms
- If supported, install the real-time option of the digital standard, e.g. R&S SMW-K55 for playing LTE waveforms

For more information, see data sheet.

2.2 About LoRa

The term LoRa refers to a "Long Range" end-to-end communication technology based on a **PHY** with a proprietary **modulation** scheme. The standard is owned by Semtech Corporation, Camarillo California, USA.

Modulation

LoRa modulation is based on a proprietary **CSS** modulation scheme. The modulation scheme is used to encode data onto swept frequency chirps, i.e. rapid changes of the modulation frequency.

A chirp (compressed high intensity radar pulse) is a signal whose frequency changes at a fixed rate (chirp rate). Each modulation symbol is represented as a rapid change in the frequency of the chirp.

The spreading factor represents the number of encoded bits per symbol and thus the change in frequency per unit time.

The higher the spreading factor, the lower the change in frequency per unit time.

Chirp rate R_C , signal bandwidth Δf , spreading factor SF , sample rate R_S , symbol duration T_S , bit rate R_B and coding rate CR are linked as in the equations below. Furthermore, typical values are given for SF , Δf and CR .

Symbol rate: $R_S = 1 / T_S = \Delta f / 2^{SF} \mid 125 \text{ kHz} \leq \Delta f \leq 500 \text{ kHz}$;

Chirp rate: $R_C = R_S * 2^{SF} = \Delta f \mid 7 \leq SF \leq 12$;

Bit rate: $R_B = SF * \Delta f / 2^{SF} * 4 / (4 + CR) \mid 1 \leq CR \leq 4$

A coding rate $CR = 0$ corresponds to no coding.

For related settings, see "[Modulation and Coding Configuration](#)" on page 18.

Channel allocation

LoRa communication channels can be freely attributed by the network following the spectrum allocation rules defined by the regional radio regulation authorities. In Europe, the allocation rules are defined by [ETSI](#) in the specifications [ETSI Specification EN 300 220-1](#) and [CEPT/ERC Recommendation 70-03](#). In North America, the allocation rules are defined by [FCC](#) in the [FCC Specification 47 Part 15.247](#).

For detailed info about regional LoRa performance requirements, see [LoRaWAN Regional Parameters Specification](#).

Table 2-1: Example: LoRaWAN regional parameters for Europe and North America

Parameter	Europe (ETSI)	North America (FCC)
Frequency band	863 MHz to 869 MHz	902 MHz to 928 MHz
Number of channels	Up- and downlink: 10	Uplink: 64 x 125 kHz and 8 x 500 kHz Downlink: 8 x 500 kHz

Parameter	Europe (ETSI)	North America (FCC)
Channel bandwidth	Uplink: 125 kHz and 250 kHz Downlink 125 kHz	Uplink: 125 kHz and 500 kHz Downlink: 500 kHz
TX power	Uplink: 14 dBm (20 dBm allowed) Downlink: 14 dBm	Uplink: 20 dBm (30 dBm allowed) Downlink: 27 dBm
Spreading factor	Uplink: 7 to 12	Uplink: 7 to 12
Data rate	250 bit/s to 50000 bit/s	980 bit/s to 21900 bit/s
Link budget	Uplink: 155 dB Downlink: 155 dB	Uplink: 154 dB Downlink: 157 dB

For related settings, see [Chapter 3.1, "General settings"](#), on page 14.

Message and frame structure

For related settings, see [Chapter 3.2, "Frame configuration settings"](#), on page 17.

2.3 About LoRaWAN

The LoRa Alliance, Inc. specifies a wide area network (WAN) stack for long range communication as shown in [Figure 2-1 \(1MA295\)](#). The LoRa modulation physical layer enables the long-range communication link. The LoRa MAC and application layers affect battery lifetime of the end-device, network capacity, quality of service and security.

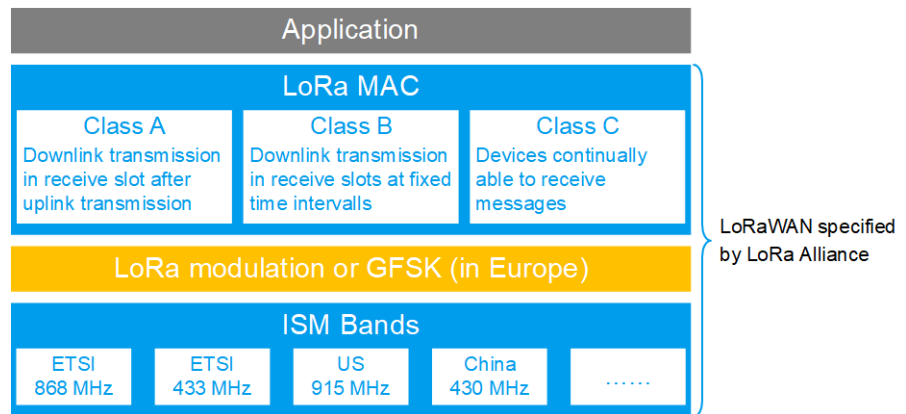

Figure 2-1: LoRaWAN stack

Network architecture

A LoRaWAN architecture has a star-shaped structure as shown in Figure 2-2 (1MA295). End-devices exchange data with the network server via gateways. Also, the network server is connected to application servers, on which typically IoT applications run.

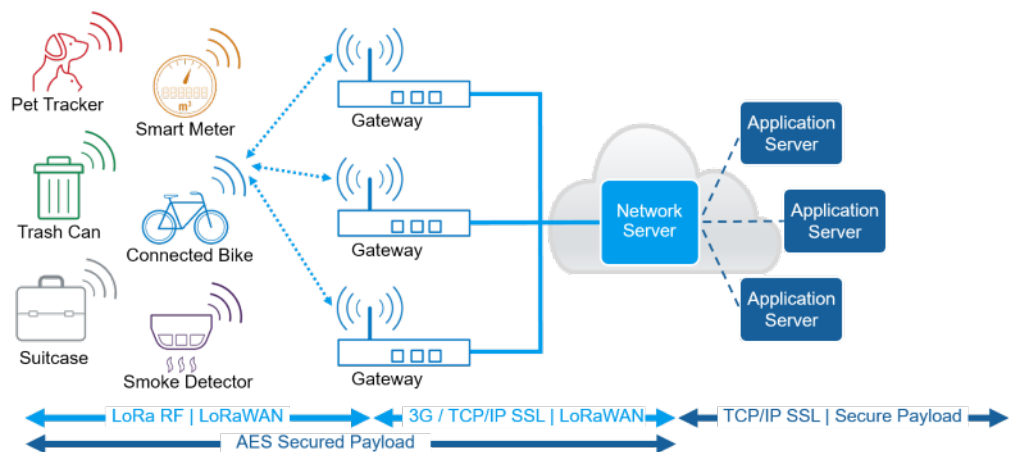

Figure 2-2: LoRaWAN network architecture

For more information, see the [LoRaWAN Specification](#).

Device communication classes

There are three classes specified for LoRaWAN compliant devices:

- **Class A:** Bi-directional end-devices (mandatory support)
Bi-directional communication between LoRa network server and receiver. A scheduled uplink transmission slot (Transmit) is followed by two downlink receive slots (Rx 1 and Rx 2).

Figure 2-3: Class A communication

- **Class B:** Bi-directional end-devices with scheduled receive slots (optional support) Besides Class A communication, more downlink receive slots (Rx) are available due to a time synchronized periodic beacon signal (Beacon) from network gateway.

Figure 2-4: Class B communication

- **Class C:** Bi-directional end-devices with maximal receive slots (optional support) Besides Class A and B communication, there are continuously open receive slots except during transmission.

Figure 2-5: Class C communication

Typically, power consumption increases and latency decreases from Class A to Class C communication.

Key features and applications

Devices compliant with the LoRa technology and operating in a LoRaWAN offer the following key features:

- **Long range:** outdoor coverage of up to 30 miles/48.3 km (line of sight)
- **Low power consumption:** battery lifetime of up to 20 years
- **Low cost:** low-cost end-devices and open software

The key features meet the requirements for IoT applications in rural areas.

3 LoRa configuration and settings

Access:

- ▶ Select "Baseband > LoRa".

The remote commands required to define these settings are described in [Chapter 6, "Remote-control commands"](#), on page 37.

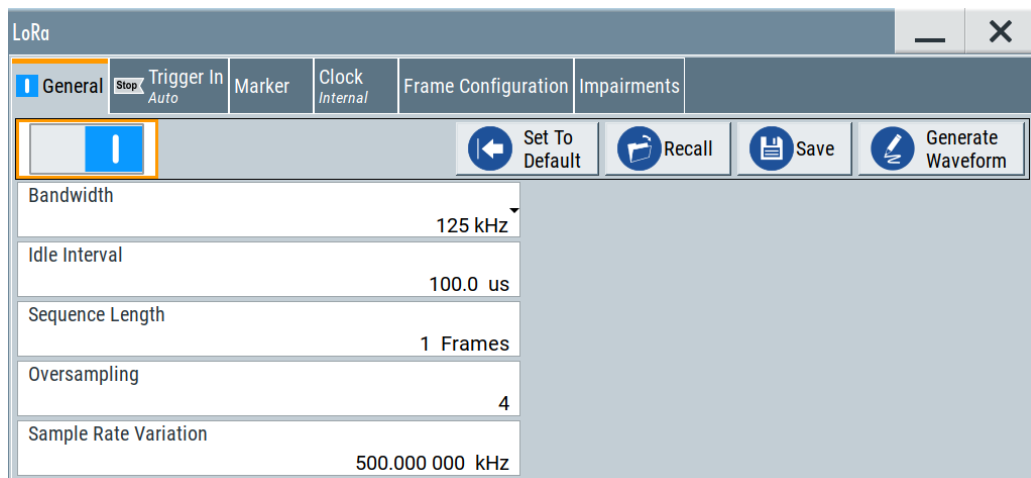

Settings:

- [General settings](#)..... 14
- [Frame configuration settings](#)..... 17
- [Impairments settings](#)..... 20

3.1 General settings

Access:

- ▶ Select "Baseband > LoRa".

The tab comprises the standard general settings.

Settings:

- [State](#)..... 15
- [Set to Default](#)..... 15
- [Save/Recall](#)..... 15
- [Generate Waveform File](#)..... 15
- [Bandwidth](#)..... 16
- [Idle Interval](#)..... 16

Sequence Length.....	16
Oversampling.....	16
Sample Rate Variation.....	16

State

Activates the standard and deactivates all the other digital standards and digital modulation modes in the same path.

Remote command:

`[:SOURce<hw>] :BB:LORA:STATe` on page 44

Set to Default

Calls the default settings. The values of the main parameters are listed in the following table.

Parameter	Value
"State"	Not affected by the "Set to Default"
"Bandwidth"	125 kHz
"Idle Interval"	100.0 us
"Sequence Length"	1 frame
"Oversampling"	4
"Sample Rate Variation"	500.000 000 kHz

Remote command:

`[:SOURce<hw>] :BB:LORA:PRESet` on page 41

Save/Recall

Accesses the "Save/Recall" dialog, that is the standard instrument function for saving and recalling the complete dialog-related settings in a file. The provided navigation possibilities in the dialog are self-explanatory.

The settings are saved in a file with predefined extension. You can define the filename and the directory, in that you want to save the file.

See also, chapter "File and Data Management" in the R&S SMW user manual.

Remote command:

`[:SOURce<hw>] :BB:LORA:SETTing:CATalog` on page 42

`[:SOURce<hw>] :BB:LORA:SETTing:STORe` on page 42

`[:SOURce<hw>] :BB:LORA:SETTing:LOAD` on page 42

`[:SOURce<hw>] :BB:LORA:SETTing:DELeTe` on page 42

Generate Waveform File

With enabled signal generation, triggers the instrument to save the current settings of an arbitrary waveform signal in a waveform file with predefined extension `*.wv`. You can define the filename and the directory, in that you want to save the file.

Using the ARB modulation source, you can play back waveform files and/or process the file to generate multi-carrier or multi-segment signals.

Remote command:

[\[:SOURce<hw>\]:BB:LORA:WAVEform:CREate](#) on page 44

Bandwidth

Sets the channel bandwidth.

The sample rate and FFT size are calculated internally and updated automatically.

Remote command:

[\[:SOURce<hw>\]:BB:LORA:BWIDth](#) on page 41

Idle Interval

Sets the time of the interval separating two frames.

Remote command:

[\[:SOURce<hw>\]:BB:LORA:IINTerval](#) on page 41

Sequence Length

Sets the sequence length of the signal in number of frames. The signal is calculated in advance and output in the arbitrary waveform generator.

Remote command:

[\[:SOURce<hw>\]:BB:LORA:SLENgth](#) on page 43

Oversampling

Sets the oversampling factor of the generated waveform. The ARB generator of the R&S SMW requires low oversampling factors and still provides excellent signal quality in terms of EVM and ACP.

A reduced sample rate saves significantly the amount of memory or allows an increased signal cycle time, and vice versa.

Remote command:

[\[:SOURce<hw>\]:BB:LORA:OSAMpling](#) on page 43

Sample Rate Variation

Sets the sample rate of the signal. A variation of this parameter affects the ARB clock rate; all other signal parameters remain unchanged.

When changing values of the affecting parameters, the sample rate is reset according to the equations below:

- [Symbol Timing Error](#) disabled:
Sample rate = [Bandwidth](#) * [Oversampling](#)
- Impairments enabled:
Sample rate = ([abs\(Freq. drift deviation\)](#) + [abs\(Freq. offset](#) + ([bandwidth](#) * [oversampling](#)) / 2) * 2

Remote command:

[\[:SOURce<hw>\]:BB:LORA:SRATe:VARiation](#) on page 43

3.2 Frame configuration settings

Access:

- Select "Baseband > LoRa > Frame Configuration".

This tab comprises the general and data settings to configure the frame structure.

Settings

Payload Reduced Coding Mode.....	17
Unmodulated Preamble Length.....	17
Sync Mode.....	18
Modulation and Coding Configuration.....	18
L Coding Rate.....	18
L Spreading Factor.....	18
L Encoder Active.....	18
L Interleaver Active.....	18
Data.....	18
L Data Length.....	19
L Data Source.....	19
L Payload CRC.....	20
L Header Configuration.....	20
L Header Active.....	20
L Compressed Mode.....	20
L Burst Mode.....	20
L Reserved Bit.....	20

Payload Reduced Coding Mode

Activates the payload reduced coding mode.

Remote command:

`[:SOURCE<hw>] :BB:LORA:FCONfiguration:PRCMode:STATE` on page 47

Unmodulated Preamble Length

Sets the unmodulated preamble length.

Remote command:

[\[:SOURCE<hw>\]:BB:LORA:FCONfiguration:UPLength](#) on page 48

Sync Mode

Sets the synchronization mode of the preamble.

Public A preamble with a public sync word is generated.

Private A preamble with a private sync word is generated.

Remote command:

[\[:SOURCE<hw>\]:BB:LORA:FCONfiguration:SMODE](#) on page 48

Modulation and Coding Configuration

Configures the modulation and coding information in the frame configuration.

Coding Rate ← Modulation and Coding Configuration

Sets the coding rate. The coding rate R_{Coding} is calculated as follows:

$$R_{\text{Coding}} = 4 / (4 + \text{"Coding Rate"})$$

"Coding Rate = 0" corresponds to no coding, i.e. $R_{\text{Coding}} = 1$.

Remote command:

[\[:SOURCE<hw>\]:BB:LORA:FCONfiguration:CRATE](#) on page 45

Spreading Factor ← Modulation and Coding Configuration

Sets the spreading factor for the modulation.

Remote command:

[\[:SOURCE<hw>\]:BB:LORA:FCONfiguration:SFACTOR](#) on page 48

Encoder Active ← Modulation and Coding Configuration

Activates encoding of the modulation symbols.

Remote command:

[\[:SOURCE<hw>\]:BB:LORA:FCONfiguration:EACTIVE:STATE](#) on page 46

Interleaver Active ← Modulation and Coding Configuration

Activates the interleaver in the frame.

Remote command:

[\[:SOURCE<hw>\]:BB:LORA:FCONfiguration:IACTIVE:STATE](#) on page 47

Data

Access:

Select "Baseband > LoRa> Frame Configuration > Data".

Configures header and payload data settings.

**Data Length** ← Data

Sets the data length of the payload in the frame.

Remote command:

[\[:SOURCE<hw>\]:BB:LORA:FCONfiguration:DLEnGth](#) on page 46

Data Source ← Data

Selects the data source for the payload.

The following standard data sources are available:

- "All 0, All 1"
An internally generated sequence containing 0 data or 1 data.
- "PNxx"
An internally generated pseudo-random noise sequence.
- "Pattern"
An internally generated sequence according to a bit pattern.
Use the "Pattern" box to define the bit pattern.
- "Data List/Select DList"
A binary data from a data list, internally or externally generated.
Select "Select DList" to access the standard "Select List" dialog.
 - Select the "Select Data List > navigate to the list file *.dm_iqd > Select" to select an existing data list.
 - Use the "New" and "Edit" functions to create internally new data list or to edit an existing one.
 - Use the standard "File Manager" function to transfer external data lists to the instrument.

See also:

- Section "Modulation Data" in the R&S SMW user manual.
- Section "File and Data Management" in the R&S SMW user manual.
- Section "Data List Editor" in the R&S SMW user manual

Remote command:

[\[:SOURCE<hw>\]:BB:LORA:FCONfiguration:DATA](#) on page 45

[\[:SOURCE<hw>\]:BB:LORA:FCONfiguration:DATA:DPATtern](#) on page 45

[\[:SOURCE<hw>\]:BB:LORA:FCONfiguration:DATA:DSElection](#) on page 46

Payload CRC ← Data

Activates a cyclic redundancy check (CRC) of the payload.

The "Payload CRC" bits are appended to the payload of the frame.

Remote command:

[\[:SOURCE<hw>\]:BB:LORA:FCONfiguration:PCRC:STATe](#) on page 47

Header Configuration ← Data

Configures the header information in the payload.

Header Active ← Header Configuration ← Data

Activates the header data in the frame.

Remote command:

[\[:SOURCE<hw>\]:BB:LORA:FCONfiguration:HACTIVE:STATe](#) on page 47

Compressed Mode ← Header Configuration ← Data

Activates the compressed mode of the header data in the frame.

Remote command:

[\[:SOURCE<hw>\]:BB:LORA:FCONfiguration:CMODE:STATe](#) on page 44

Burst Mode ← Header Configuration ← Data

Activates the burst mode of header data in the frame.

Remote command:

[\[:SOURCE<hw>\]:BB:LORA:FCONfiguration:BMODE:STATe](#) on page 44

Reserved Bit ← Header Configuration ← Data

Enables the reserved bit in the frame header.

Remote command:

[\[:SOURCE<hw>\]:BB:LORA:FCONfiguration:RBIT:STATe](#) on page 47

3.3 Impairments settings

Access:

- ▶ Select "Baseband > LoRa > Impairments".

This tab comprises the impairments settings for the signal.

Settings

Impairments.....	21
Symbol Timing Error.....	21
Frequency Offset.....	21
Frequency Drift Configuration.....	21
L State.....	21
L Deviation.....	22
L Type.....	22
L Rate.....	22

Impairments

Activates the impairments settings.

Impairments change the signal to simulate a non-ideal transmitter.

Remote command:

`[:SOURce<hw>] :BB:LORA:IMPairments:STATE` on page 50

Symbol Timing Error

Sets the symbol timing error.

The set error corresponds to applying a deviation to the transmitter symbol clock.

Remote command:

`[:SOURce<hw>] :BB:LORA:IMPairments:STERror` on page 50

Frequency Offset

Sets the carrier frequency offset.

Remote command:

`[:SOURce<hw>] :BB:LORA:IMPairments:FOffset` on page 50

Frequency Drift Configuration

Configures carrier frequency drift settings of the signal.

State ← Frequency Drift Configuration

Activates carrier frequency drift settings.

Remote command:

`[:SOURCE<hw>] :BB:LORA:IMPAIRMENTS:FDRIFT:STATE` on page 49

Deviation ← Frequency Drift Configuration

Sets the maximum deviation of the carrier signal from the center frequency during the frequency drift procedure.

Remote command:

`[:SOURCE<hw>] :BB:LORA:IMPAIRMENTS:FDDEVIATION` on page 49

Type ← Frequency Drift Configuration

Sets the type of frequency drift, i.e. how the carrier signal drifts around the center frequency.

Linear Linear frequency drift.

Sine Sine frequency drift.

Remote command:

`[:SOURCE<hw>] :BB:LORA:IMPAIRMENTS:FDTYPE` on page 49

Rate ← Frequency Drift Configuration

Sets the rate of the carrier frequency drift.

A rate of, e.g., 300 Hz implies, that the carrier signal drifts 300 times per second around the center frequency.

Remote command:

`[:SOURCE<hw>] :BB:LORA:IMPAIRMENTS:FDRATE` on page 49

4 Signal generation control

This section lists settings provided for configuring the baseband filter, for defining the signal generation start and for generating signals necessary for synchronization with other instruments.

Settings:

- [Trigger settings](#)..... 23
- [Marker settings](#)..... 28
- [Clock settings](#)..... 30
- [Local and global connectors settings](#)..... 31

4.1 Trigger settings

Access:

- ▶ Select "Baseband" > "LoRa" > "Trigger In".

This tab provides settings to select and configure the trigger, like trigger source, trigger mode and trigger delays, and to arm or trigger an internal trigger manually. The header of the tab displays the status of the trigger signal and trigger mode. As in the tabs "Marker" and "Clock", this tab provides also access to the settings of the related connectors.

Routing and activating a trigger signal

1. Define the effect of a trigger event and the trigger signal source.
 - a) Select "Trigger In" > "Mode".
 - b) Select "Trigger In" > "Source".
2. For external trigger signals, define the connector for signal input. See [Chapter 4.4, "Local and global connectors settings"](#), on page 31.
You can map trigger signals to one or more USER x or T/M connectors.
Local and global connectors settings allow you to configure the signal mapping, the polarity, the trigger threshold and the input impedance of the input connectors.
3. Activate baseband signal generation. In the block diagram, set "Baseband" > "On".
The R&S SMW starts baseband signal generation after the configured trigger event.

About baseband trigger signals

This section focuses on the available settings.

For information on how these settings affect the signal, refer to section "Basics on ..." in the R&S SMW user manual.

Settings:

Trigger Settings Common to All Basebands.....	24
Mode.....	24
Signal Duration Unit.....	25
Signal Duration.....	25
Running/Stopped.....	25
Time Based Trigger.....	25
Trigger Time.....	25
Arm.....	26
Execute Trigger.....	26
Source.....	26
Sync. Output to External Trigger/Sync. Output to Trigger.....	27
External Inhibit/Trigger Inhibit.....	27
External Delay/Trigger Delay.....	28

Trigger Settings Common to All Basebands

To enable simultaneous signal generation in all basebands, the R&S SMW couples the trigger settings in the available basebands in any instrument's configuration involving signal routing with signal addition. For example, in MIMO configuration, routing and summing of basebands or of streams.

The icon  indicates that common trigger settings are applied.

You can access and configure the common trigger source and trigger mode settings in any of the basebands. An arm or a restart trigger event applies to all basebands, too. You can still apply different delay to each of the triggers individually.

Mode

Selects trigger mode, i.e. determines the effect of a trigger event on the signal generation.

For more information, refer to chapter "Basics" in the R&S SMW user manual.

- "Auto"
The signal is generated continuously.
- "Retrigger"
The signal is generated continuously. A trigger event (internal or external) causes a restart.
- "Armed Auto"
The signal is generated only when a trigger event occurs. Then the signal is generated continuously.
An "Arm" stops the signal generation. A subsequent trigger event (internal or external) causes a restart.
- "Armed Retrigger"
The signal is generated only when a trigger event occurs. Then the signal is generated continuously. Every subsequent trigger event causes a restart.

An "Arm" stops signal generation. A subsequent trigger event (internal or external) causes a restart.

- "Single"
The signal is generated only when a trigger event occurs. Then the signal is generated once to the length specified at "Signal Duration".
Every subsequent trigger event (internal or external) causes a restart.

Remote command:

[\[:SOURce<hw>\]:BB:LORA\[:TRIGger\]:SEQuence](#) on page 51

Signal Duration Unit

Defines the unit for describing the length of the signal sequence to be output in the "Single" trigger mode.

Remote command:

[\[:SOURce<hw>\]:BB:LORA:TRIGger:SLUNit](#) on page 54

Signal Duration

Requires trigger "Mode" > "Single".

Enters the length of the trigger signal sequence.

Use this parameter, for example, for the following applications:

- To output the trigger signal partly.
- To output a predefined sequence of the trigger signal.

Remote command:

[\[:SOURce<hw>\]:BB:LORA:TRIGger:SEnGth](#) on page 54

Running/Stopped

With enabled modulation, displays the status of signal generation for all trigger modes.

- "Running"
The signal is generated; a trigger was (internally or externally) initiated in triggered mode.
- "Stopped"
The signal is not generated and the instrument waits for a trigger event.

Remote command:

[\[:SOURce<hw>\]:BB:LORA:TRIGger:RMODe](#) on page 54

Time Based Trigger

Requires trigger "Mode" > "Armed Auto"/"Single".

Activates time-based triggering with a fixed time reference.

The R&S SMW triggers signal generation when its operating system time ("Current Time") matches a specified time trigger ("Trigger Time"). As trigger source, you can use an internal trigger or an external global trigger.

How to: Chapter "Time-based triggering" in the R&S SMW user manual.

Remote command:

[\[:SOURce<hw>\]:BB:LORA:TRIGger:TIME\[:STATe\]](#) on page 55

Trigger Time

Requires trigger "Mode" > "Armed Auto"/"Single".

Sets date and time for a time-based trigger signal.

Set a trigger time that is later than the "Current Time". The current time is the operating system time of the R&S SMW. If you set an earlier trigger time than the current time, time-based triggering is not possible.

How to: Chapter "Time-based triggering" in the R&S SMW user manual.

"Date"	Sets the date of the time-based trigger in format YYYY-MM-DD. Remote command: [:SOURce<hw>]:BB:LORA:TRIGger:TIME:DATE on page 54
"Time"	Sets the time of the time-based trigger in format hh:mm:ss. Remote command: [:SOURce<hw>]:BB:LORA:TRIGger:TIME:TIME on page 55

Arm

Stops the signal generation until subsequent trigger event occurs.

Remote command:

[\[:SOURce<hw>\]:BB:LORA:TRIGger:ARM:EXECute](#) on page 53

Execute Trigger

For internal trigger source, executes trigger manually.

Remote command:

[\[:SOURce<hw>\]:BB:LORA:TRIGger:EXECute](#) on page 53

Source

The following sources of the trigger signal are available:

- "Internal"
The trigger event is executed manually by the "Execute Trigger".
- "Internal (Baseband A/B)"
The trigger event is provided by the trigger signal from the other basebands. If common trigger settings are applied, this trigger source is disabled.
- "External Global Trigger"
The trigger event is the active edge of an external trigger signal provided and configured at the USER x connectors.
- "External Local Trigger"
The trigger event is the active edge of an external trigger signal provided and configured at the local T/M/C connector.
With coupled trigger settings, the signal has to be provided at the T/M/C1/2/3 connectors.
- "External Local Clock"
The trigger event is the active edge of an external local clock signal provided and configured at the local T/M/C connector.
With coupled trigger settings, the signal has to be provided at the T/M/C1 connector.

How to: ["Routing and activating a trigger signal"](#) on page 23

Remote command:

[\[:SOURce<hw>\]:BB:LORA:TRIGger:SOURce](#) on page 51

Sync. Output to External Trigger/Sync. Output to Trigger

Enables signal output synchronous to the trigger event.

- "On"

Corresponds to the default state of this parameter.

The signal calculation starts simultaneously with the trigger event. Because of the processing time of the instrument, the first samples are cut off and no signal is output. After elapsing of the internal processing time, the output signal is synchronous to the trigger event.

- "Off"

The signal output begins after elapsing of the processing time. Signal output starts with sample 0. The complete signal is output.

This mode is recommended for triggering of short signal sequences. Short sequences are sequences with signal duration comparable with the processing time of the instrument.

Remote command:

`[:SOURce<hw>] :BB:LORA:TRIGger [:EXTernal] :SYNChronize:OUTPut`
on page 52

External Inhibit/Trigger Inhibit

Applies for external trigger signal or trigger signal from the other path.

Sets the duration with that any following trigger event is suppressed. In "Retrigger" mode, for example, a new trigger event does not cause a restart of the signal generation until the specified inhibit duration does not expire.

For more information, see chapter "Basics" in the R&S SMW user manual.

Remote command:

`[:SOURce<hw>] :BB:LORA:TRIGger [:EXTernal] :INHibit` on page 52

`[:SOURce<hw>] :BB:LORA:TRIGger:OBASeband:INHibit` on page 53

External Delay/Trigger Delay

Delays the trigger event of the signal from:

- The external trigger source
- The other path
- The other basebands (internal trigger), if common trigger settings are used.

Use this setting to:

- Synchronize the instrument with the device under test (DUT) or other external devices
- Postpone the signal generation start in the basebands compared to each other

For more information, see chapter "Basics on ..." in the R&S SMW user manual.

Remote command:

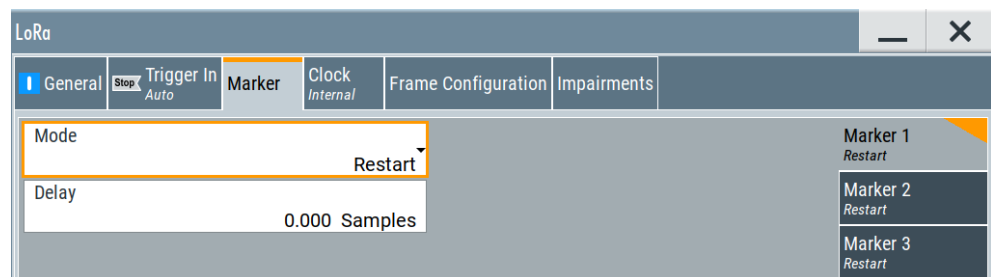

`[:SOURce<hw>] :BB:LORA:TRIGger [:EXTernal] :DELay` on page 52

`[:SOURce<hw>] :BB:LORA:TRIGger:OBASeband:DELay` on page 52

4.2 Marker settings

Access:

- ▶ Select "Baseband" > "LoRa" > "Marker".

This tab provides settings to select and configure the marker output signal including marker mode and marker delay.

Routing and activating a marker signal

1. To define the signal shape of an individual marker signal "x", select "Marker" > "Marker x" > "Mode".
2. Optionally, define the connector for signal output. See [Chapter 4.4, "Local and global connectors settings"](#), on page 31.
You can map marker signals to one or more USER x or T/M connectors.
3. Activate baseband signal generation. In the block diagram, set "Baseband" > "On".

The R&S SMW adds the marker signal to the baseband signal. Also, R&S SMW outputs this signal at the configured USER x connector.

About marker output signals

This section focuses on the available settings.

For information on how these settings affect the signal, refer to section "Basics on ..." in the R&S SMW user manual.

Settings:

Mode.....	29
Delay.....	30

Mode

Marker configuration for up to 3 markers. The settings are used to select the marker mode defining the shape and periodicity of the markers. The contents of the dialog change with the selected marker mode.

How to: ["Routing and activating a marker signal"](#) on page 28

"Restart"	A marker signal is generated at the start of each ARB sequence.
"Frame"	A frame clock with the frame period specified under "Period" is generated on the output connector. The marker signal is generated after every specified number of frames.
"Pulse"	<p>A regular marker signal is generated. The pulse frequency is defined by entering a divider. The frequency is derived by dividing the sample rate by the divider. The input box for the divider opens when "Pulse" is selected, and the resulting pulse frequency is displayed below it. The maximum pulse frequency is half the symbol rate.</p> <p>Remote command: [:SOURce<hw>]:BB:LORA:TRIGger:OUTPut<ch>:PULSe:DIVider on page 57 [:SOURce<hw>]:BB:LORA:TRIGger:OUTPut<ch>:PULSe:FREQuency? on page 57</p>
"Pattern"	<p>A marker signal that is defined by a bit pattern is generated. The pattern has a maximum length of 64 bits and is defined in an input field which opens when pattern is selected.</p> <p>Remote command: [:SOURce<hw>]:BB:LORA:TRIGger:OUTPut<ch>:PATtern on page 57</p>

"On/Off Ratio" A regular marker signal that is defined by an On/Off ratio is generated. A period lasts one On and Off cycle.

Remote command:

`[:SOURce<hw>] :BB:LORA:TRIGger:OUTPut<ch>:ONTime`
on page 57

`[:SOURce<hw>] :BB:LORA:TRIGger:OUTPut<ch>:OFFTime`
on page 57

Remote command:

`[:SOURce<hw>] :BB:LORA:TRIGger:OUTPut<ch>:MODE` on page 56

Delay

Delays the marker signal at the marker output relative to the signal generation start.

Variation of the parameter "Marker x" > "Delay" causes signal recalculation.

Remote command:

`[:SOURce<hw>] :BB:LORA:TRIGger:OUTPut<ch>:DELay` on page 56

4.3 Clock settings

Access:

- ▶ Select "Baseband" > "LoRa" > "Clock".

This tab provides settings to select and configure the clock signal, like the clock source and clock mode.

Defining the clock

1. Select "Clock" > "Source" to define the source of clock signal.
2. For external clock signals, define the connector for signal input. See [Chapter 4.4, "Local and global connectors settings"](#), on page 31.

You can map clock signals to one or more USER x or T/M connectors.

Local and global connectors settings allow you to configure the signal mapping, the polarity, the trigger threshold and the input impedance of the input connectors.

3. Activate baseband signal generation. In the block diagram, set "Baseband" > "On".

The R&S SMW starts baseband signal generation with a symbol rate that equals the clock rate.

About clock signals

This section focuses on the available settings.

For information on how these settings affect the signal, refer to section "Basics on ..." in the R&S SMW user manual.

Settings:

Clock Source	31
Clock Mode	31
Measured External Clock	31

Clock Source

Selects the clock source.

- "Internal"
The instrument uses its internal clock reference.
- "External Local Clock"
Option: R&S SMW-B10
The instrument expects an external clock reference at the local T/M/C connector.

How to: "[Defining the clock](#)" on page 30

Remote command:

[:SOURce<hw>] :BB:LORA:CLOCK:SOURce on page 58

Clock Mode

Sets the type of externally supplied clock.

Remote command:

[:SOURce<hw>] :BB:LORA:CLOCK:MODE on page 58

Measured External Clock

Provided for permanent monitoring of the enabled and externally supplied clock signal.

Remote command:

CLOCK:INPut:FREQuency?

4.4 Local and global connectors settings

Accesses a dialog to configure local connectors or global connectors.

The button is available in the following dialogs or tabs:

- "Trigger / Marker / Clock" dialog that is accessible via the "TMC" block in the block diagram.
- "Trigger In", "Marker" and "Clock" tabs that are accessible via the "Baseband" block in the block diagram.

See also chapter "Local and global connectors settings" in the user manual.

5 Generating LoRa test signals

The section describes how to set up and configure the R&S SMW for LoRa signal generation for simple receiver tests.

See also:

- Application note [1MA295](#), for a comprehensive overview on LoRa device characterization, including Tx measurements.
- [Chapter 6.1, "Programming examples"](#), on page 37, for remote command configuration examples.

5.1 Generating RX sensitivity test signals

Rx sensitivity test setup

The R&S SMW generates a LoRa test signal. The LoRa DUT receives and demodulates the test signal. The LoRa Test Tool, installed on an external PC, analyzes the demodulation data in terms of **PER** analysis.

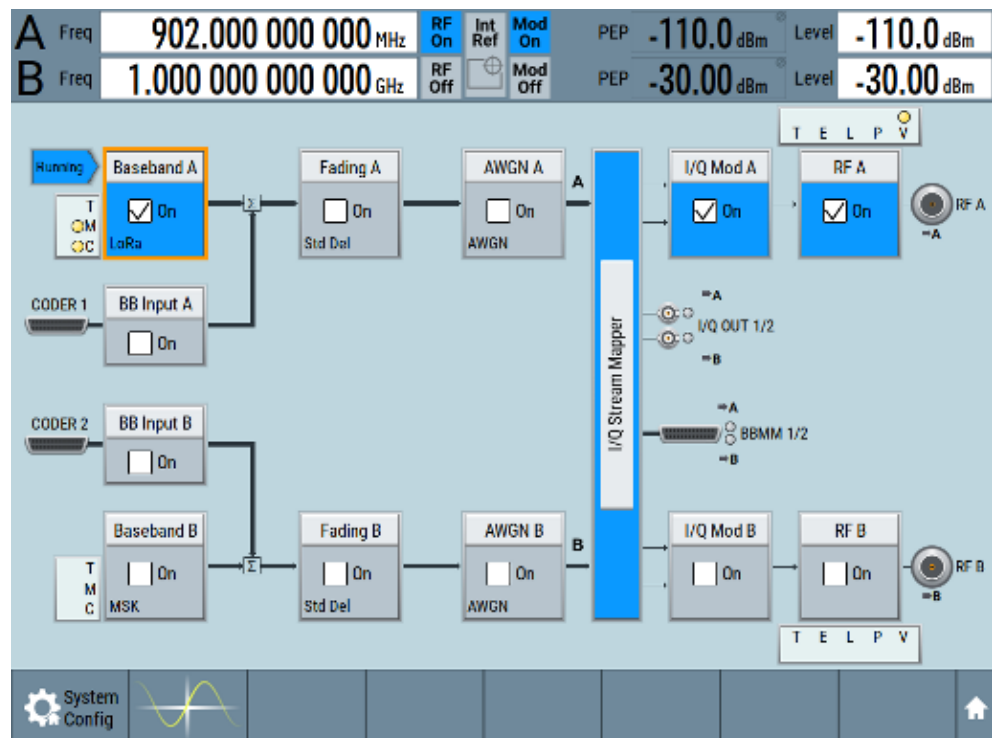

Figure 5-1: Test setup for Rx sensitivity test

- | | |
|--------------|--------------------------------------------------------------------------------------|
| 1 | = R&S SMW generating the RF signal |
| 2 | = LoRa DUT receiving the RF signal |
| 3 | = External PC with LoRa Test Tool for PER analysis |
| Blue arrow | = LoRa test RF signal path |
| Orange arrow | = Connection for LoRa DUT control and analysis via LoRa Test Tool at the external PC |

To perform an Rx sensitivity test

1. Preset the R&S SMW.
2. Select "Baseband > LoRa".
3. Configure "General" settings of the LoRa test signal, e.g. the "Bandwidth" compatible with the DUT.

4. Select "Frame Configuration > General" to configure modulation and coding parameters, e.g. "Coding Rate" and "Spreading Factor".
5. Select "Frame Configuration > Data" to configure payload, e.g. "Data Length" and "Data Source".
6. Set "General > State > On" to activate LoRa baseband modulation.
7. In the block diagram, set "I/Q Mod > On" and "RF > On" to activate I/Q modulation and signal generation.
8. On the "Status Bar", set "Frequency" and "Level".

9. Configure the DUT for reception of the LoRa test signal generated at the R&S SMW.
10. Gradually reduce the level of the LoRa test signal.
11. Monitor the [PER](#) at the DUT, e.g. at an external PC with an analysis software (LoRa Test Tool).

The Rx sensitivity level corresponds to a specified PER value, e.g. "Level > -137 dBm" with PER = 1 %. The level depends on the spreading factor.

5.2 Generating blocking test signals

Blocking test setup

The R&S SMW generates a LoRa test signal, the wanted signal. A second signal generator, e.g. an R&S SGS, generates an interfering **CW** signal, the unwanted signal. Both signals are combined via an RF power combiner. The LoRa DUT receives and demodulates the combined signal. The LoRa Test Tool, installed on external PC, analyzes the demodulation data in terms of **PER** analysis.

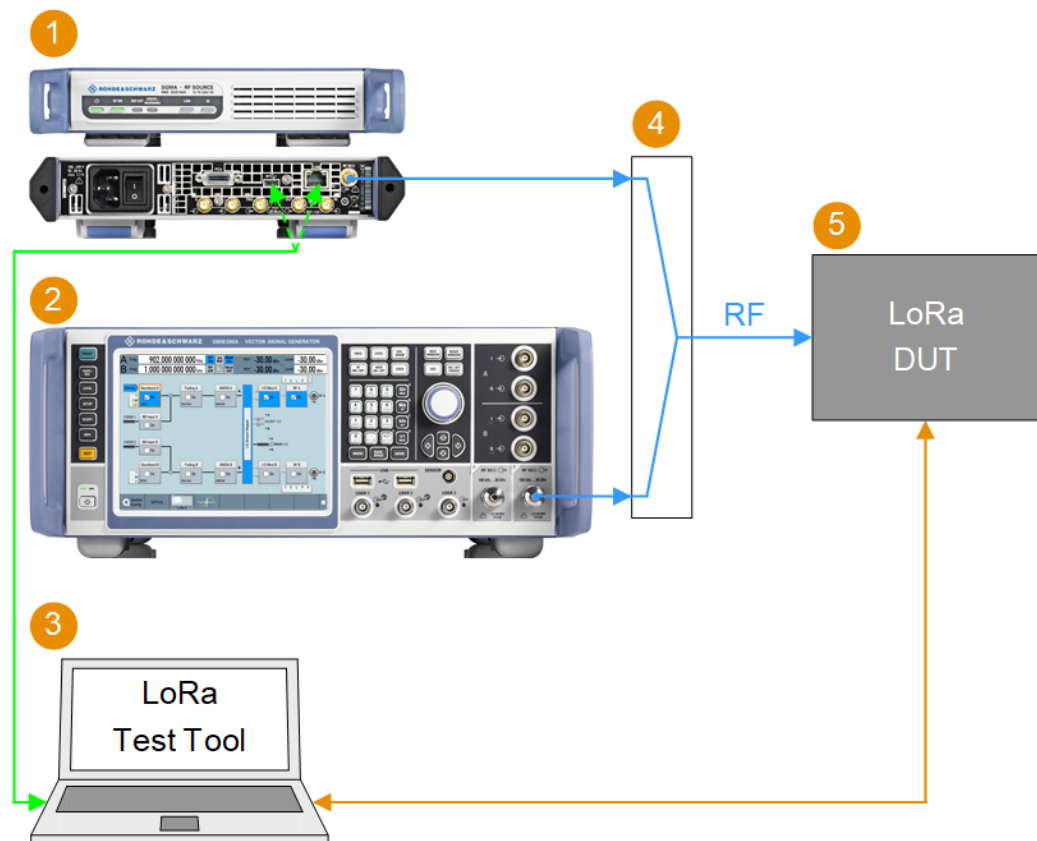

Figure 5-2: Test setup for blocking test

- 1 = R&S SGS generating an interfering RF signal, the unwanted signal
- 2 = R&S SMW generating a LoRa test signal, the wanted signal
- 3 = External PC with R&S SGS control software and with LoRa Test Tool for PER analysis
- 4 = RF power combiner combining the interfering RF signal and the LoRa test signal
- 5 = LoRa DUT receiving the combined RF signal
- Blue arrow = LoRa test signal path
- Green arrow = Connection for R&S SGS control via R&S SGMA-GUI control software at the external PC
- Orange arrow = Connection for LoRa DUT control and analysis via LoRa Test Tool at the external PC

To perform an adjacent channel blocking test

1. To generate the wanted signal, configure the R&S SMW as in "[To perform an Rx sensitivity test](#)" on page 33.

2. To generate the adjacent channel blocking signal at the second signal generator, e.g. the R&S SGS, proceed as follows:
 - a) Preset the R&S SGS.
 - b) Set the frequency as specified.
The frequency value is typically a few hundred kilohertz higher/lower than the frequency of the wanted signal.
 - c) Set the level as specified.
The level values for uplink and downlink can differ.
3. At the R&S SMW, increase the level of the wanted signal.
4. Monitor the **PER** at the DUT, e.g. with an analysis software (LoRa Test Tool).
The adjacent channel blocking level is the wanted signal level, that corresponds to a specified PER value, typically PER < 1 %.

To perform an on-channel blocking test

1. To generate the wanted signal, configure the R&S SMW as in "[To perform an Rx sensitivity test](#)" on page 33.
2. To generate the on-channel blocking signal at the second signal generator, e.g. the R&S SGS, proceed as follows:
 - a) Preset the R&S SGS.
 - b) Set the frequency, that is the same frequency as the wanted signal ([step 8](#)).
 - c) Set the level as specified.
The level values for uplink and downlink can differ.
3. At the R&S SMW, increase the level of the wanted signal.
4. Monitor the **PER** at the DUT, e.g. with an analysis software (LoRa Test Tool).
The on-channel blocking level is the wanted signal level, that corresponds to a specified PER value, typically PER < 1 %.

- [R&S SGS100A user manual](#)
- [R&S SGMA-GUI Software](#) software for control of the R&S SGS

6 Remote-control commands

The following commands are required to generate signals with the LoRa option in a remote environment. We assume that the R&S SMW has already been set up for remote operation in a network as described in the R&S SMW documentation. A knowledge about the remote control operation and the SCPI command syntax are assumed.

Conventions used in SCPI command descriptions

For a description of the conventions used in the remote command descriptions, see section "Remote-Control Commands" in the R&S SMW user manual.

Common suffixes

The following common suffixes are used in the remote commands:

Suffix	Value range	Description
ENTity<ch>	1 to 4	Entity in a multiple entity configuration with separate baseband sources ENTity3 4 require option R&S SMW-K76
SOURce<hw>	[1] to 4	Available baseband signals Only SOURce1 possible, if the keyword ENTity is used
OUTPut<ch>	1 to 3	Available markers

Using SCPI command aliases for advanced mode with multiple entities

You can address multiple entities configurations by using the SCPI commands starting with the keyword `SOURce` or the alias commands starting with the keyword `ENTity`.

Note that the meaning of the keyword `SOURce<hw>` changes in the second case.

For details, see section "SCPI Command Aliases for Advanced Mode with Multiple Entities" in the R&S SMW user manual.

The following commands specific to the R&S SMW-K131 option are described here:

- [Programming examples](#)..... 37
- [General commands](#)..... 41
- [Frame configuration commands](#)..... 44
- [Impairments commands](#)..... 49
- [Trigger commands](#)..... 51
- [Marker commands](#)..... 56
- [Clock commands](#)..... 58

6.1 Programming examples

The corresponding sections of the same title provide simple programming examples for the R&S SMW. The purpose of the examples is to present **all** commands for a given

task. In real applications, one would rather reduce the examples to an appropriate subset of commands.

The programming examples have been tested with a software tool which provides an environment for the development and execution of remote tests. To keep the examples as simple as possible, only the "clean" SCPI syntax elements are reported. Non-executable command lines (for example comments) start with two // characters.

At the beginning of the most remote control program, an instrument (p)reset is recommended to set the R&S SMW to a definite state. The commands *RST and SYSTem:PRESet are equivalent for this purpose. *CLS also resets the status registers and clears the output buffer.

Example: Storing current configuration

```
SOURcel:BB:LORA:SETTing:STORe "/var/user/my_settings"
*RST
SOURcel:BB:LORA:SETTing:CATalog?
// my_lora, lora
SOURcel:BB:LORA:SETTing:LOAD "/var/user/lora"
SOURcel:BB:LORA:STATe 1
SOURcel:BB:LORA:SETTing:DEL "my_lora"
SOURcel:BB:LORA:WAVEform:CREate "/var/user/my_lora_wv"
```

Example: Generating a LoRa signal

```
SOURcel:BB:LORA:PRESet
// Configure LoRa general settings: Bandwidth, idle interval time, sequence
// length and sampling parameters
SOURcel:BB:LORA:BWIDth BW125
SOURcel:BB:LORA:IINTerval 0.0001
SOURcel:BB:LORA:SLENgth 1
SOURcel:BB:LORA:OSAMpling 4
SOURcel:BB:LORA:SRATE:VARIation 500000
SOURcel:BB:LORA:STATe 1
// Configure the carrier signal, e.g. for ETSI compliant devices.
SOURcel:FREQuency:CW 868500000
SOURcel:POWer:POWer 14
OUTPut1:STATe 1
```

Example: Configuring LoRa frame parameters

```
SOURcel:BB:LORA:PRESet
// Configure preamble and synchronization parameters.
SOURcel:BB:LORA:FCONfiguration:PRCMode:STATe 0
SOURcel:BB:LORA:FCONfiguration:SMODE PUBL
SOURcel:BB:LORA:FCONfiguration:UPLength 8

// Configure modulation and coding parameters.
SOURcel:BB:LORA:FCONfiguration:CRATe CR1
SOURcel:BB:LORA:FCONfiguration:EACTive:STATe 1
SOURcel:BB:LORA:FCONfiguration:SFACToR SF7
SOURcel:BB:LORA:FCONfiguration:IACTive:STATe 1

// Configure data, header and payload parameters.
SOURcel:BB:LORA:FCONfiguration:DLENgth 16
SOURcel:BB:LORA:FCONfiguration:PCRC:STATe 1
SOURcel:BB:LORA:FCONfiguration:DATA PN9
SOURcel:BB:LORA:FCONfiguration:HACTive:STATe 1
SOURcel:BB:LORA:FCONfiguration:BMODE:STATe 0
SOURcel:BB:LORA:FCONfiguration:CMODE:STATe 0
SOURcel:BB:LORA:FCONfiguration:RBIT:STATe 0
```

Example: Configuring impairments to LoRa modulation

```
SOURcel:BB:LORA:PRESet
// Configure symbol timing error and frequency offset.
SOURcel:BB:LORA:IMPairments:STERror 0
SOURcel:BB:LORA:IMPairments:FOFFset 0
// Configure frequency drift parameters.
SOURcel:BB:LORA:IMPairments:FDTYpe LIN
SOURcel:BB:LORA:IMPairments:FDDeviatiOn 0
SOURcel:BB:LORA:IMPairments:FDRate 300
SOURcel:BB:LORA:IMPairments:FDRift:STATe 1
// Activate the impairment settings.
SOURcel:BB:LORA:IMPairments:STATe 1
```

Example: Trigger configuration

```

SOURCE:BB:LORA:TRIGGER:SOURCE INTERNAL
SOURCE:BB:LORA:TRIGGER:SEQUENCE ARETRIGGER
SOURCE:BB:LORA:STAT ON
SOURCE:BB:LORA:TRIGGER:EXECUTE
SOURCE:BB:LORA:TRIGGER:ARM:EXECUTE
SOURCE:BB:LORA:TRIGGER:RMODE?
// stopped
SOURCE:BB:LORA:TRIGGER:EXECUTE
SOURCE:BB:LORA:TRIGGER:RMODE?

// run
SOURCE:BB:LORA:TRIGGER:SEQUENCE SING
SOURCE:BB:LORA:TRIGGER:SLUNIT SAMP
SOURCE:BB:LORA:TRIGGER:SLLENGTH 25777
SOURCE:BB:LORA:TRIGGER:SEQUENCE ARET
SOURCE:BB:LORA:TRIGGER:SOURCE EGT1
SOURCE:BB:LORA:TRIGGER:EXTERNAL:SYNCHRONIZE:OUTPUT 1
SOURCE:BB:LORA:TRIGGER:EXTERNAL:INHIBIT 100
SOURCE:BB:LORA:TRIGGER:EXTERNAL:DELAY 10

// SOURCE:BB:LORA:TRIGGER:SOURCE INTB
// The internal trigger signal from the other path must be used.
// SOURCE:BB:LORA:TRIGGER:OBASBAND:DELAY 25
// SOURCE:BB:LORA:TRIGGER:OBASBAND:INHIBIT 10

```

Example: Configure and enable standard marker signals

```

// Configure marker 1 settings.
SOURCE:BB:LORA:TRIGGER:OUTPUT1:MODE RAT
SOURCE:BB:LORA:TRIGGER:OUTPUT1:ONTIME 10
SOURCE:BB:LORA:TRIGGER:OUTPUT1:OFFTIME 20
// Configure marker 2 settings.
SOURCE:BB:LORA:TRIGGER:OUTPUT2:MODE?
// RESTART
SOURCE:BB:LORA:TRIGGER:OUTPUT2:DELAY 16384
// Configure marker 3 settings.
SOURCE:BB:LORA:TRIGGER:OUTPUT3:MODE PATT
SOURCE:BB:LORA:TRIGGER:OUTPUT3:PATTERN #H2,2

```

Example: Clock settings

```

SOURCE:BB:LORA:CLOCK:SOURCE ELCL
SOURCE:BB:LORA:CLOCK:MODE SAMP
CLOCK:INPUT:FREQUENCY?
// 1000000

```

6.2 General commands

<code>[:SOURce<hw>]:BB:LORA:BWIDth</code>	41
<code>[:SOURce<hw>]:BB:LORA:IINTerval</code>	41
<code>[:SOURce<hw>]:BB:LORA:PRESet</code>	41
<code>[:SOURce<hw>]:BB:LORA:SETTing:CATalog</code>	42
<code>[:SOURce<hw>]:BB:LORA:SETTing:DELeTe</code>	42
<code>[:SOURce<hw>]:BB:LORA:SETTing:LOAD</code>	42
<code>[:SOURce<hw>]:BB:LORA:SETTing:STORe</code>	42
<code>[:SOURce<hw>]:BB:LORA:SLENgth</code>	43
<code>[:SOURce<hw>]:BB:LORA:OSAMpling</code>	43
<code>[:SOURce<hw>]:BB:LORA:SRATe:VARiation</code>	43
<code>[:SOURce<hw>]:BB:LORA:STATe</code>	44
<code>[:SOURce<hw>]:BB:LORA:WAVEform:CREate</code>	44

`[:SOURce<hw>]:BB:LORA:BWIDth <Bw>`

Sets the channel bandwidth.

Parameters:

`<Bw>` BW7 | BW10 | BW15 | BW20 | BW31 | BW41 | BW62 | BW125 |
 BW250 | BW500
 *RST: BW125

Example: See [Example "Generating a LoRa signal"](#) on page 38.

Manual operation: See ["Bandwidth"](#) on page 16

`[:SOURce<hw>]:BB:LORA:IINTerval <IInterval>`

Sets the time of the interval separating two frames.

Parameters:

`<IInterval>` float
 Range: 0 to 1
 Increment: 0.1E-6
 *RST: 100E-6
 Default unit: s

Example: See [Example "Generating a LoRa signal"](#) on page 38.

Manual operation: See ["Idle Interval"](#) on page 16

`[:SOURce<hw>]:BB:LORA:PRESet`

Sets the parameters of the digital standard to their default values (*RST values specified for the commands).

Not affected is the state set with the command `SOURce<hw>:BB:LORA:STATe`.

Example: See [Example "Generating a LoRa signal"](#) on page 38.

Usage: Event

Manual operation: See ["Set to Default"](#) on page 15

[:SOURCE<hw>]:BB:LORA:SETTING:CATalog <Catalog>

Queries the files with settings in the default directory. Listed are files with the file extension *.lora.

Parameters:

<Catalog> <filename1>,<filename2>,...

Returns a string of filenames separated by commas.

Example: See [Example"Storing current configuration"](#) on page 38.

Manual operation: See ["Save/Recall"](#) on page 15

[:SOURCE<hw>]:BB:LORA:SETTING:DELeTe <Filename>

Deletes the selected file from the default or the specified directory. Deleted are files with extension *.lora.

Parameters:

<Filename> "<filename>"

Filename or complete file path; file extension can be omitted

Example: See [Example"Storing current configuration"](#) on page 38.

Manual operation: See ["Save/Recall"](#) on page 15

[:SOURCE<hw>]:BB:LORA:SETTING:LOAD <Filename>

Loads the selected file from the default or the specified directory. Loaded are files with extension *.lora.

Parameters:

<Filename> "<filename>"

Filename or complete file path; file extension can be omitted

Example: See [Example"Storing current configuration"](#) on page 38.

Manual operation: See ["Save/Recall"](#) on page 15

[:SOURCE<hw>]:BB:LORA:SETTING:STORE <Filename>

Saves the current settings into the selected file; the file extension (*.lora) is assigned automatically.

Setting parameters:

<Filename> "<filename>"

Filename or complete file path

Example: See [Example"Storing current configuration"](#) on page 38.

Usage: Setting only
Manual operation: See ["Save/Recall"](#) on page 15

[[:SOURce<hw>]:BB:LORA:SLENgth <SLength>

Sets the sequence length of the signal in number of frames. The signal is calculated in advance and output in the arbitrary waveform generator.

Parameters:

<SLength> integer
 Range: 1 to dynamic
 *RST: 1

Example: See [Example"Generating a LoRa signal"](#) on page 38.

Manual operation: See ["Sequence Length"](#) on page 16

[[:SOURce<hw>]:BB:LORA:OSAMpling <OSampling>

Sets the oversampling factor of the generated waveform.

A reduced sample rate saves significantly the amount of memory or allows an increased signal cycle time, and vice versa.

Parameters:

<OSampling> integer
 Range: 1 to 32
 *RST: 4

Example: See [Example"Generating a LoRa signal"](#) on page 38.

Manual operation: See ["Oversampling"](#) on page 16

[[:SOURce<hw>]:BB:LORA:SRATe:VARiation <Variation>

Sets the sample rate of the signal.

A variation of this parameter affects the ARB clock rate; all other signal parameters remain unchanged. When changing values of the affecting parameters, the sample rate is reset.

Parameters:

<Variation> float
 Range: 4E2 to 20E6
 Increment: 1E-3
 *RST: 1E6

Example: See [Example"Generating a LoRa signal"](#) on page 38.

Manual operation: See ["Sample Rate Variation"](#) on page 16

[[:SOURce<hw>]:BB:LORA:STATe <State>

Activates the standard and deactivates all the other digital standards and digital modulation modes in the same path.

Parameters:

<State> 1 | ON | 0 | OFF
 *RST: 0

Example: See [Example"Generating a LoRa signal"](#) on page 38.

Manual operation: See ["State"](#) on page 15

[[:SOURce<hw>]:BB:LORA:WAVEform:CREate <Filename>

Saves the current settings as an ARB signal in a waveform file (*.wv).

Setting parameters:

<Filename> string
 Filename or complete file path; file extension is assigned automatically

Example: See [Example"Storing current configuration"](#) on page 38.

Usage: Setting only

Manual operation: See ["Generate Waveform File"](#) on page 15

6.3 Frame configuration commands

[[:SOURce<hw>]:BB:LORA:FCONfiguration:BMODE:STATe <State>

Activates the burst mode of header data in the frame.

Parameters:

<State> 1 | ON | 0 | OFF
 *RST: 0

Example: See [Example"Configuring LoRa frame parameters"](#) on page 39.

Manual operation: See ["Burst Mode"](#) on page 20

[[:SOURce<hw>]:BB:LORA:FCONfiguration:CMODE:STATe <State>

Activates the compressed mode of the header data in the frame.

Parameters:

<State> 1 | ON | 0 | OFF
 *RST: 0

Example: See [Example"Configuring LoRa frame parameters"](#) on page 39.

Manual operation: See ["Compressed Mode"](#) on page 20

[[:SOURce<hw>]:BB:LORA:FCONfiguration:CRATe <CRate>

Sets the coding rate.

Parameters:

<CRate> CR0 | CR1 | CR2 | CR3 | CR4
 CR<x> = 0 to 4
 The coding rate R_{Coding} is calculated as follows:
 $R_{\text{Coding}} = 4 / (4 + \text{CR}_{<x>})$
 "CR0" corresponds to no coding, i.e. $R_{\text{Coding}} = 1$.
 *RST: CR1

Example: See [Example"Configuring LoRa frame parameters"](#) on page 39.

Manual operation: See ["Coding Rate"](#) on page 18

[[:SOURce<hw>]:BB:LORA:FCONfiguration:DATA <Data>

Sets the data source for the payload data in a LoRa frame.

Parameters:

<Data> ZERO | ONE | PATtern | PN9 | PN11 | PN15 | PN16 | PN20 |
 PN21 | PN23 | DLISt

PNxx

The pseudo-random sequence generator is used as the data source. There is a choice of different lengths of random sequence.

DLISt

A data list is used. The data list is selected with the aid of command `SOURce:BB:LORA:DATA DLISt`.

ALL0 | ALL1

Internal 0 or 1 data is used.

PATtern

Internal data is used. The bit pattern for the data is defined with the aid of command `:SOURce:BB:LORA:DATA PATtern`.

*RST: PN9

Example: See [Example"Configuring LoRa frame parameters"](#) on page 39.

Manual operation: See ["Data Source"](#) on page 19

[[:SOURce<hw>]:BB:LORA:FCONfiguration:DATA:DPATtern <DPattern>, <BitCount>

Sets the data pattern, if the `data source` `PATT` is selected.

Parameters:

<DPattern>	numeric
	*RST: #H0
<BitCount>	integer
	Range: 1 to 64
	*RST: 1

Example: See [Example"Configuring LoRa frame parameters"](#) on page 39.

Manual operation: See ["Data Source"](#) on page 19

[:SOURce<hw>]:BB:LORA:FCONfiguration:DATA:DSElection <DSelection>

Selects an existing data list file from the default directory or from the specific directory.

The data list is only used, if the `data source` DLIS is selected.

Parameters:

<DSelection>	string
	Filename incl. file extension or complete file path

Example: See [Example"Configuring LoRa frame parameters"](#) on page 39.

Manual operation: See ["Data Source"](#) on page 19

[:SOURce<hw>]:BB:LORA:FCONfiguration:DLENgth <DLength>

Sets the data length of the payload in the frame.

Parameters:

<DLength>	integer
	Range: 1 to 255
	*RST: 16

Example: See [Example"Configuring LoRa frame parameters"](#) on page 39.

Manual operation: See ["Data Length"](#) on page 19

[:SOURce<hw>]:BB:LORA:FCONfiguration:EACTIVE:STATE <State>

Activates encoding of the modulation symbols.

Parameters:

<State>	1 ON 0 OFF
	*RST: 1

Example: See [Example"Configuring LoRa frame parameters"](#) on page 39.

Manual operation: See ["Encoder Active"](#) on page 18

[[:SOURce<hw>]:BB:LORA:FCONfiguration:HACTive:STATe <State>

Activates the header data in the frame.

Parameters:

<State> 1 | ON | 0 | OFF
 *RST: 1

Example: See [Example"Configuring LoRa frame parameters"](#) on page 39.

Manual operation: See ["Header Active"](#) on page 20

[[:SOURce<hw>]:BB:LORA:FCONfiguration:IActive:STATe <State>

Activates the interleaver in the frame.

Parameters:

<State> 1 | ON | 0 | OFF
 *RST: 1

Example: See [Example"Configuring LoRa frame parameters"](#) on page 39.

Manual operation: See ["Interleaver Active"](#) on page 18

[[:SOURce<hw>]:BB:LORA:FCONfiguration:PCRC:STATe <State>

Activates a cyclic redundancy check (CRC) of the payload.

Parameters:

<State> 1 | ON | 0 | OFF
 *RST: 1

Example: See [Example"Configuring LoRa frame parameters"](#) on page 39.

Manual operation: See ["Payload CRC"](#) on page 20

[[:SOURce<hw>]:BB:LORA:FCONfiguration:PRCMode:STATe <State>

Activates the payload reduced coding mode.

Parameters:

<State> 1 | ON | 0 | OFF
 *RST: 0

Example: See [Example"Configuring LoRa frame parameters"](#) on page 39.

Manual operation: See ["Payload Reduced Coding Mode"](#) on page 17

[[:SOURce<hw>]:BB:LORA:FCONfiguration:RBIT:STATe <State>

Enables the reserved bit in the frame header.

Parameters:

<State> 1 | ON | 0 | OFF
 *RST: 0

Example: See [Example"Configuring LoRa frame parameters"](#) on page 39.

Manual operation: See ["Reserved Bit"](#) on page 20

[:SOURCE<hw>]:BB:LORA:FCONfiguration:SMODE <SMode>

Sets the synchronization mode of the preamble.

Parameters:

<SMode> PRIVate | PUBLic

PRIVate

A preamble with a public sync word is generated.

PUBLic

A preamble with a private sync word is generated.

*RST: PUBLic

Example: See [Example"Configuring LoRa frame parameters"](#) on page 39.

Manual operation: See ["Sync Mode"](#) on page 18

[:SOURCE<hw>]:BB:LORA:FCONfiguration:SFACtor <Sf>

Sets the spreading factor for the modulation.

Parameters:

<Sf> SF6 | SF7 | SF8 | SF9 | SF10 | SF11 | SF12
 *RST: SF7

Example: See [Example"Configuring LoRa frame parameters"](#) on page 39.

Manual operation: See ["Spreading Factor"](#) on page 18

[:SOURCE<hw>]:BB:LORA:FCONfiguration:UPLength <PLength>

Sets the unmodulated preamble length.

Parameters:

<PLength> integer
 Range: 6 to 8
 *RST: 8

Example: See [Example"Configuring LoRa frame parameters"](#) on page 39.

Manual operation: See ["Unmodulated Preamble Length"](#) on page 17

6.4 Impairments commands

[:SOURce<hw>]:BB:LORA:IMPairments:FDDeviation <FDDeviation>

Sets the frequency deviation of the frequency drift.

Parameters:

<FDDeviation> integer
 Range: -200E3 to 200E3
 *RST: 0

Example: See [Example"Configuring impairments to LoRa modulation"](#) on page 39.

Manual operation: See ["Deviation"](#) on page 22

[:SOURce<hw>]:BB:LORA:IMPairments:FDRate <FDRate>

Sets the rate of the carrier frequency drift.

Parameters:

<FDRate> integer
 Range: 160 to 1.6E3
 *RST: 300

Example: See [Example"Configuring impairments to LoRa modulation"](#) on page 39.

Manual operation: See ["Rate"](#) on page 22

[:SOURce<hw>]:BB:LORA:IMPairments:FDRift:STATE <State>

Activates frequency drift settings in the payload.

Parameters:

<State> 1 | ON | 0 | OFF
 *RST: 1

Example: See [Example"Configuring impairments to LoRa modulation"](#) on page 39.

Manual operation: See ["State"](#) on page 21

[:SOURce<hw>]:BB:LORA:IMPairments:FDTType <FDType>

Sets the frequency drift type.

Parameters:

<FDType> LINear | SINE
 LINear
 Generation of frequency drift is set linear.

SINE

Generation of frequency drift is set sinusoid.

*RST: LINear

Example: See [Example"Configuring impairments to LoRa modulation"](#) on page 39.

Manual operation: See ["Type"](#) on page 22

[:SOURce<hw>]:BB:LORA:IMPairments:FOFFset <FOffset>

Sets the frequency offset.

Parameters:

<FOffset> integer
 Range: -200E3 to 200E3
 *RST: 0

Example: See [Example"Configuring impairments to LoRa modulation"](#) on page 39.

Manual operation: See ["Frequency Offset"](#) on page 21

[:SOURce<hw>]:BB:LORA:IMPairments:STATe <State>

Activates impairments settings in the payload.

Parameters:

<State> 1 | ON | 0 | OFF
 *RST: 0

Example: See [Example"Configuring impairments to LoRa modulation"](#) on page 39.

Manual operation: See ["Impairments"](#) on page 21

[:SOURce<hw>]:BB:LORA:IMPairments:STERror <STError>

Sets symbol timing error.

Parameters:

<STError> integer
 Range: -300 to 300
 *RST: 0

Example: See [Example"Configuring impairments to LoRa modulation"](#) on page 39.

Manual operation: See ["Symbol Timing Error"](#) on page 21

6.5 Trigger commands

<code>[:SOURce<hw>]:BB:LORA[:TRIGger]:SEquence</code>	51
<code>[:SOURce<hw>]:BB:LORA:TRIGger:SOURce</code>	51
<code>[:SOURce<hw>]:BB:LORA:TRIGger[:EXTernal]:SYNChronize:OUTPut</code>	52
<code>[:SOURce<hw>]:BB:LORA:TRIGger[:EXTernal]:DELay</code>	52
<code>[:SOURce<hw>]:BB:LORA:TRIGger[:EXTernal]:INHibit</code>	52
<code>[:SOURce<hw>]:BB:LORA:TRIGger:OBASeband:DELay</code>	52
<code>[:SOURce<hw>]:BB:LORA:TRIGger:OBASeband:DELay</code>	53
<code>[:SOURce<hw>]:BB:LORA:TRIGger:OBASeband:INHibit</code>	53
<code>[:SOURce<hw>]:BB:LORA:TRIGger:ARM:EXECute</code>	53
<code>[:SOURce<hw>]:BB:LORA:TRIGger:EXECute</code>	53
<code>[:SOURce<hw>]:BB:LORA:TRIGger:RMODE</code>	54
<code>[:SOURce<hw>]:BB:LORA:TRIGger:SLENgth</code>	54
<code>[:SOURce<hw>]:BB:LORA:TRIGger:SLUNit</code>	54
<code>[:SOURce<hw>]:BB:LORA:TRIGger:TIME:DATE</code>	54
<code>[:SOURce<hw>]:BB:LORA:TRIGger:TIME:TIME</code>	55
<code>[:SOURce<hw>]:BB:LORA:TRIGger:TIME[:STATe]</code>	55

`[:SOURce<hw>]:BB:LORA[:TRIGger]:SEquence <Sequence>`

Sets the trigger mode.

Parameters:

`<Sequence>` AUTO | RETRigger | AAUTo | ARETRigger | SINGLE
 *RST: AUTO

Example: See [Example"Trigger configuration"](#) on page 40.

Manual operation: See ["Mode"](#) on page 24

`[:SOURce<hw>]:BB:LORA:TRIGger:SOURce <Source>`

Selects the trigger signal source and determines the way the triggering is executed.
 Provided are:

- Internal triggering by a command (INTernal)
- External trigger signal via one of the local or global connectors
 - EGT1 | EGT2: External global trigger
 - EGC1 | EGC2: External global clock
 - ELTRigger: External local trigger
 - ELCLock: External local clock
- Internal triggering by a signal from the other basebands (INTA | INTB)
- OBASeband | BEXTernal | EXTernal: Setting only
 Provided only for backward compatibility with other Rohde & Schwarz signal generators.
 The R&S SMW accepts these values and maps them automatically as follows:
 EXTernal = EGT1, BEXTernal = EGT2, OBASeband = INTA or INTB
 (depending on the current baseband)

Parameters:

<Source> INTB|INTernal|OBASeband|EGT1|EGT2|EGC1|EGC2|ELTRigger|INTA|ELCLock|BEXternal|EXTernal
 *RST: INTernal

Example: See [Example"Trigger configuration"](#) on page 40.

Manual operation: See ["Source"](#) on page 26

[:SOURce<hw>]:BB:LORA:TRIGger[:EXTernal]:SYNChronize:OUTPut <Output>

Enables signal output synchronous to the trigger event.

Parameters:

<Output> 1 | ON | 0 | OFF
 *RST: 1

Example: See [Example"Trigger configuration"](#) on page 40.

Manual operation: See ["Sync. Output to External Trigger/Sync. Output to Trigger"](#) on page 27

[:SOURce<hw>]:BB:LORA:TRIGger[:EXTernal]:DELay <Delay>

Sets the trigger delay.

Parameters:

<Delay> float
 Range: 0 to 2147483647
 Increment: 0.01
 *RST: 0

Example: See [Example"Trigger configuration"](#) on page 40.

Manual operation: See ["External Delay/Trigger Delay"](#) on page 28

[:SOURce<hw>]:BB:LORA:TRIGger[:EXTernal]:INHibit <Inhibit>

Specifies the duration by which a restart is inhibited.

Parameters:

<Inhibit> integer
 Range: 0 to dynamic
 *RST: 0

Example: See [Example"Trigger configuration"](#) on page 40.

Manual operation: See ["External Inhibit/Trigger Inhibit"](#) on page 27

[:SOURce<hw>]:BB:LORA:TRIGger:OBASeband:DELay <Delay>

Sets the trigger delay for triggering by the trigger signal from the other path.

Parameters:

<Delay> float
 Range: 0 to 2147483647
 Increment: 0.01
 *RST: 0
 Default unit: samples

Example: See [Example"Trigger configuration"](#) on page 40.

Manual operation: See ["External Delay/Trigger Delay"](#) on page 28

[:SOURce<hw>]:BB:LORA:TRIGger:OBASeband:DELay <Delay>

Sets the trigger delay for triggering by the trigger signal from the other path.

Parameters:

<Delay> float
 Range: 0 to 65535
 Increment: 0.01
 *RST: 0

Example: See [Example"Trigger configuration"](#) on page 40.

[:SOURce<hw>]:BB:LORA:TRIGger:OBASeband:INHibit <Inhibit>

For triggering via the other path, specifies the duration by which a restart is inhibited.

Parameters:

<Inhibit> integer
 Range: 0 to 67108863
 *RST: 0

Example: See [Example"Trigger configuration"](#) on page 40.

Manual operation: See ["External Inhibit/Trigger Inhibit"](#) on page 27

[:SOURce<hw>]:BB:LORA:TRIGger:ARM:EXECute

Stops signal generation; a subsequent trigger event restarts signal generation.

Example: See [Example"Trigger configuration"](#) on page 40.

Usage: Event

Manual operation: See ["Arm"](#) on page 26

[:SOURce<hw>]:BB:LORA:TRIGger:EXECute

Executes a trigger.

Example: See [Example"Trigger configuration"](#) on page 40.

Usage: Event

Manual operation: See ["Execute Trigger"](#) on page 26

[:SOURce<hw>]:BB:LORA:TRIGger:RMODE <RMode>

Queries the signal generation status.

Parameters:

<RMode> STOP | RUN
 *RST: STOP

Example: See [Example"Trigger configuration"](#) on page 40.

Manual operation: See ["Running/Stopped"](#) on page 25

[:SOURce<hw>]:BB:LORA:TRIGger:SLENgth <SLength>

Defines the length of the signal sequence that is output in the `SINGLE` trigger mode

Parameters:

<SLength> integer
 Range: 1 to dynamic
 *RST: 1

Example: See [Example"Trigger configuration"](#) on page 40.

Manual operation: See ["Signal Duration"](#) on page 25

[:SOURce<hw>]:BB:LORA:TRIGger:SLUNit <SIUnit>

Defines the unit for the entry of the signal sequence length.

Parameters:

<SIUnit> SEQUENCE | SAMPLE
 *RST: SEQUENCE

Example: SOURce1:BB:LORA:TRIGger:SEQUence SING

 SOURce1:BB:LORA:TRIGger:SLUNit SEQ

 SOURce1:BB:LORA:TRIGger:SLENgth 2

Manual operation: See ["Signal Duration Unit"](#) on page 25

[:SOURce<hw>]:BB:LORA:TRIGger:TIME:DATE <Year>, <Month>, <Day>

Sets the date for a time-based trigger signal. For trigger modes single or armed auto, you can activate triggering at this date via the following command:

SOURce<hw>:BB:<DigStd>:TRIGger:TIME:STATE

<DigStd> is the mnemonic for the digital standard, for example, `ARB`. Time-based triggering behaves analogously for all digital standards that support this feature.

Parameters:

<Year>	integer	
	Range:	1980 to 9999
<Month>	integer	
	Range:	1 to 12
<Day>	integer	
	Range:	1 to 31

Example: See example "Configure a time-based trigger signal" in the sub-chapter "Trigger Commands" of the chapter "SOURce:BB:ARB subsystem" in the R&S SMW user manual.

Manual operation: See ["Trigger Time"](#) on page 25

[:SOURce<hw>]:BB:LORA:TRIGger:TIME:TIME <Hour>, <Minute>, <Second>

Sets the time for a time-based trigger signal. For trigger modes single or armed auto, you can activate triggering at this time via the following command:

```
SOURce<hw>:BB:<DigStd>:TRIGger:TIME:STATe
```

<DigStd> is the mnemonic for the digital standard, for example, ARB. Time-based triggering behaves analogously for all digital standards that support this feature.

Parameters:

<Hour>	integer	
	Range:	0 to 23
<Minute>	integer	
	Range:	0 to 59
<Second>	integer	
	Range:	0 to 59

Example: See example "Configure a time-based trigger signal" in the sub-chapter "Trigger Commands" of the chapter "SOURce:BB:ARB subsystem" in the R&S SMW user manual.

Manual operation: See ["Trigger Time"](#) on page 25

[:SOURce<hw>]:BB:LORA:TRIGger:TIME[:STATe] <State>

Activates time-based triggering with a fixed time reference. If activated, the R&S SMW triggers signal generation when its operating system time matches a specified time.

Specify the trigger date and trigger time with the following commands:

```
SOURce<hw>:BB:<DigStd>:TRIGger:TIME:DATE
```

```
SOURce<hw>:BB:<DigStd>:TRIGger:TIME:TIME
```

<DigStd> is the mnemonic for the digital standard, for example, ARB. Time-based triggering behaves analogously for all digital standards that support this feature.

Parameters:

<State> 1 | ON | 0 | OFF
 *RST: 0

Example:

See example "Configure a time-based trigger signal" in the sub-chapter "Trigger Commands" of the chapter "SOURce:BB:ARB subsystem" in the R&S SMW user manual.

Manual operation: See ["Time Based Trigger"](#) on page 25

6.6 Marker commands

[:SOURce<hw>]:BB:LORA:TRIGger:OUTPut<ch>:MODE	56
[:SOURce<hw>]:BB:LORA:TRIGger:OUTPut<ch>:DELay	56
[:SOURce<hw>]:BB:LORA:TRIGger:OUTPut<ch>:ONTime	57
[:SOURce<hw>]:BB:LORA:TRIGger:OUTPut<ch>:OFFTime	57
[:SOURce<hw>]:BB:LORA:TRIGger:OUTPut<ch>:PATtern	57
[:SOURce<hw>]:BB:LORA:TRIGger:OUTPut<ch>:PULSe:DIVider	57
[:SOURce<hw>]:BB:LORA:TRIGger:OUTPut<ch>:PULSe:FREQUency?	57

[:SOURce<hw>]:BB:LORA:TRIGger:OUTPut<ch>:MODE <Mode>

Defines the signal for the selected marker output.

Parameters:

<Mode> REStart | PULSe | PATtern | RATio | TRIGger | FRAME
 *RST: REStart

Example:

See [Example "Configure and enable standard marker signals"](#) on page 40.

Manual operation: See ["Mode"](#) on page 29

[:SOURce<hw>]:BB:LORA:TRIGger:OUTPut<ch>:DELay <Delay>

Defines the delay between the signal on the marker outputs and the start of the signals.

Parameters:

<Delay> float
 Range: 0 to 16777215
 Increment: 0.001
 *RST: 0
 Default unit: Samples

Example:

See [Example "Configure and enable standard marker signals"](#) on page 40.

Manual operation: See ["Delay"](#) on page 30

```
[:SOURce<hw>]:BB:LORA:TRIGger:OUTPut<ch>:ONTime <OnTime>
[:SOURce<hw>]:BB:LORA:TRIGger:OUTPut<ch>:OFFTime <OffTime>
```

Sets the number of samples during which the marker output is on or off.

Parameters:

```
<OffTime>          integer
                   Range:    1 to 16777215
                   *RST:    1
```

Example: See [Example "Configure and enable standard marker signals"](#) on page 40.

Manual operation: See ["Mode"](#) on page 29

```
[:SOURce<hw>]:BB:LORA:TRIGger:OUTPut<ch>:PATtern <Pattern>, <BitCount>
```

Sets the bit pattern defining the marker signal.

Parameters:

```
<Pattern>          numeric
                   *RST:    #H2

<BitCount>        integer
                   Range:    1 to 64
                   *RST:    2
```

Example: See [Example "Configure and enable standard marker signals"](#) on page 40.

Manual operation: See ["Mode"](#) on page 29

```
[:SOURce<hw>]:BB:LORA:TRIGger:OUTPut<ch>:PULSe:DIVider <Divider>
```

Set the pulse divider for marker mode `PULSe`.

Parameters:

```
<Divider>         integer
                   Range:    2 to 1024
                   *RST:    2
```

Example: See `[:SOURce<hw>]:BB:LORA:TRIGger:OUTPut<ch>:PULSe:FREQuency?` on page 57.

Manual operation: See ["Mode"](#) on page 29

```
[:SOURce<hw>]:BB:LORA:TRIGger:OUTPut<ch>:PULSe:FREQuency?
```

Queries the pulse frequency.

The return value depends on the `pulse divider`, which is the `sample rate` divided by the pulse divider.

Return values:

<Frequency> float
 Range: 2 to 1024
 Increment: 1E-3
 *RST: 2

Example:

```
SOURce1:BB:LORA:TRIGger:OUTPut1:MODE PULSe
SOURce1:BB:LORA:TRIGger:OUTPut1:PULSe:DIVider 4
SOURce1:BB:LORA:SRATe:VARiatiOn?
// 500000
SOURce1:BB:LORA:TRIGger:OUTPut1:PULSe:FREQuency?
// 125000
```

Usage: Query only

Manual operation: See ["Mode"](#) on page 29

6.7 Clock commands

[:SOURce<hw>]:BB:LORA:CLOCK:SOURce.....	58
[:SOURce<hw>]:BB:LORA:CLOCK:MODE.....	58

[:SOURce<hw>]:BB:LORA:CLOCK:SOURce <Source>

Selects the clock source:

- **INTernal:** Internal clock reference
- **ELCLock:** External local clock
- **EXTernal = ELCLock:** Setting only
 Provided for backward compatibility with other Rohde & Schwarz signal generators

Parameters:

<Source> INTernal|ELCLock|EXTernal
 *RST: INTernal

Example: See [Example"Clock settings"](#) on page 40.

Manual operation: See ["Clock Source"](#) on page 31

[:SOURce<hw>]:BB:LORA:CLOCK:MODE <Mode>

Sets the type of externally supplied clock.

Parameters:

<Mode> SAMPlE | MSAMPlE
 *RST: SAMPlE

Example: See [Example"Clock settings"](#) on page 40.

Manual operation: See ["Clock Mode"](#) on page 31

<https://www.rohde-schwarz.com/software/sgs100a/>

R&S SGS100A user manual: <https://www.rohde-schwarz.com/manual/sgs100a/>

List of commands

[:SOURce<hw>]:BB:LORA:BWIDth.....	41
[:SOURce<hw>]:BB:LORA:CLOCK:MODE.....	58
[:SOURce<hw>]:BB:LORA:CLOCK:SOURce.....	58
[:SOURce<hw>]:BB:LORA:FCONfiguration:BMODE:STATe.....	44
[:SOURce<hw>]:BB:LORA:FCONfiguration:CMODE:STATe.....	44
[:SOURce<hw>]:BB:LORA:FCONfiguration:CRATE.....	45
[:SOURce<hw>]:BB:LORA:FCONfiguration:DATA.....	45
[:SOURce<hw>]:BB:LORA:FCONfiguration:DATA:DPATtern.....	45
[:SOURce<hw>]:BB:LORA:FCONfiguration:DATA:DSELEction.....	46
[:SOURce<hw>]:BB:LORA:FCONfiguration:DLENGth.....	46
[:SOURce<hw>]:BB:LORA:FCONfiguration:EACTive:STATe.....	46
[:SOURce<hw>]:BB:LORA:FCONfiguration:HACTive:STATe.....	47
[:SOURce<hw>]:BB:LORA:FCONfiguration:IACTive:STATe.....	47
[:SOURce<hw>]:BB:LORA:FCONfiguration:PCRC:STATe.....	47
[:SOURce<hw>]:BB:LORA:FCONfiguration:PRCMode:STATe.....	47
[:SOURce<hw>]:BB:LORA:FCONfiguration:RBIT:STATe.....	47
[:SOURce<hw>]:BB:LORA:FCONfiguration:SFACTOR.....	48
[:SOURce<hw>]:BB:LORA:FCONfiguration:SMODE.....	48
[:SOURce<hw>]:BB:LORA:FCONfiguration:UPLength.....	48
[:SOURce<hw>]:BB:LORA:IINTerval.....	41
[:SOURce<hw>]:BB:LORA:IMPairments:FDDeviation.....	49
[:SOURce<hw>]:BB:LORA:IMPairments:FDRate.....	49
[:SOURce<hw>]:BB:LORA:IMPairments:FDRift:STATe.....	49
[:SOURce<hw>]:BB:LORA:IMPairments:FDType.....	49
[:SOURce<hw>]:BB:LORA:IMPairments:FOFFset.....	50
[:SOURce<hw>]:BB:LORA:IMPairments:STATe.....	50
[:SOURce<hw>]:BB:LORA:IMPairments:STERror.....	50
[:SOURce<hw>]:BB:LORA:OSAMpling.....	43
[:SOURce<hw>]:BB:LORA:PRESet.....	41
[:SOURce<hw>]:BB:LORA:SETTing:CATalog.....	42
[:SOURce<hw>]:BB:LORA:SETTing:DELeTe.....	42
[:SOURce<hw>]:BB:LORA:SETTing:LOAD.....	42
[:SOURce<hw>]:BB:LORA:SETTing:STORe.....	42
[:SOURce<hw>]:BB:LORA:SLENGth.....	43
[:SOURce<hw>]:BB:LORA:SRATE:VARiAtion.....	43
[:SOURce<hw>]:BB:LORA:STATe.....	44
[:SOURce<hw>]:BB:LORA:TRIGger:ARM:EXECute.....	53
[:SOURce<hw>]:BB:LORA:TRIGger:EXECute.....	53
[:SOURce<hw>]:BB:LORA:TRIGger:OBASeband:DELAy.....	52
[:SOURce<hw>]:BB:LORA:TRIGger:OBASeband:DELAy.....	53
[:SOURce<hw>]:BB:LORA:TRIGger:OBASeband:INHibit.....	53
[:SOURce<hw>]:BB:LORA:TRIGger:OUTPut<ch>:DELAy.....	56
[:SOURce<hw>]:BB:LORA:TRIGger:OUTPut<ch>:MODE.....	56
[:SOURce<hw>]:BB:LORA:TRIGger:OUTPut<ch>:OFFTime.....	57
[:SOURce<hw>]:BB:LORA:TRIGger:OUTPut<ch>:ONTTime.....	57
[:SOURce<hw>]:BB:LORA:TRIGger:OUTPut<ch>:PATtern.....	57
[:SOURce<hw>]:BB:LORA:TRIGger:OUTPut<ch>:PULSe:DIVider.....	57

[[:SOURce<hw>]:BB:LORA:TRIGger:OUTPut<ch>:PULSe:FREQuency?.....	57
[[:SOURce<hw>]:BB:LORA:TRIGger:RMODE.....	54
[[:SOURce<hw>]:BB:LORA:TRIGger:SLENgth.....	54
[[:SOURce<hw>]:BB:LORA:TRIGger:SLUNit.....	54
[[:SOURce<hw>]:BB:LORA:TRIGger:SOURce.....	51
[[:SOURce<hw>]:BB:LORA:TRIGger:TIME:DATE.....	54
[[:SOURce<hw>]:BB:LORA:TRIGger:TIME:TIME.....	55
[[:SOURce<hw>]:BB:LORA:TRIGger:TIME[:STATe].....	55
[[:SOURce<hw>]:BB:LORA:TRIGger[:EXTErnal]:DELay.....	52
[[:SOURce<hw>]:BB:LORA:TRIGger[:EXTErnal]:INHibit.....	52
[[:SOURce<hw>]:BB:LORA:TRIGger[:EXTErnal]:SYNChronize:OUTPut.....	52
