

R&S®FSMR3-K6

Pulse Measurement Option

User Manual

1179450502
Version 03

This document describes the following R&S®FSMR3000 models:

- R&S®FSMR3008 (1345.4004K08)
- R&S®FSMR3026 (1345.4004K26)
- R&S®FSMR3050 (1345.4004K50)

The contents of this manual correspond to firmware version 1.20 and higher.

The following firmware options are described:

- R&S FSMR3-K6 (1345.3137.02)

1 Documentation overview

This section provides an overview of the R&S FSMR3 user documentation. Unless specified otherwise, you find the documents at:

www.rohde-schwarz.com/product/FSMR3000.html/

1.1 Getting started manual

Introduces the R&S FSMR3 and describes how to set up and start working with the product. Includes basic operations, typical measurement examples, and general information, e.g. safety instructions, etc.

A printed version is delivered with the instrument. A PDF version is available for download on the Internet.

1.2 User manuals and help

Separate user manuals are provided for the base unit and the firmware applications:

- Base unit manual
Contains the description of all instrument modes and functions. It also provides an introduction to remote control, a complete description of the remote control commands with programming examples, and information on maintenance, instrument interfaces and error messages.
- Firmware application manual
Contains the description of the specific functions of a firmware application, including remote control commands. Basic information on operating the R&S FSMR3 is not included.

The contents of the user manuals are available as help in the R&S FSMR3. The help offers quick, context-sensitive access to the complete information for the base unit and the firmware applications.

All user manuals are also available for download or for immediate display on the Internet.

1.3 Service manual

Describes the performance test for checking the rated specifications, module replacement and repair, firmware update, troubleshooting and fault elimination, and contains mechanical drawings and spare part lists.

The service manual is available for registered users on the global Rohde & Schwarz information system (GLORIS):

1.4 Instrument security procedures

Deals with security issues when working with the R&S FSMR3 in secure areas. It is available for download on the Internet.

1.5 Printed safety instructions

Provides safety information in many languages. The printed document is delivered with the product.

1.6 Data sheets and brochures

The data sheet contains the technical specifications of the R&S FSMR3. It also lists the firmware applications and their order numbers, and optional accessories.

The brochure provides an overview of the instrument and deals with the specific characteristics.

See www.rohde-schwarz.com/brochure-datasheet/FSMR3000/

1.7 Release notes and open-source acknowledgment (OSA)

The release notes list new features, improvements and known issues of the current firmware version, and describe the firmware installation.

The software makes use of several valuable open source software packages. An open-source acknowledgment document provides verbatim license texts of the used open source software.

See www.rohde-schwarz.com/firmware/FSMR3000/

1.8 Application notes, application cards, white papers, etc.

These documents deal with special applications or background information on particular topics.

See www.rohde-schwarz.com/application/FSMR3000/

2 Welcome to the pulse measurements application

The R&S FSMR3000 Pulse application is a firmware application that adds functionality to perform measurements on pulsed signals to the R&S FSMR3.

The R&S FSMR3000 Pulse application provides measurement and analysis functions for pulse signals frequently used in radar applications, for example.

The R&S FSMR3000 Pulse application (R&S FSMR3-K6) features:

- Automated measurement of many pulse parameters including timing, amplitude, frequency and phase parameters
- Statistical analysis of pulse parameters
- Analysis of "parameter trends" over time and frequency
- Visualization of the dependency between parameters
- Display of amplitude, frequency, phase and power spectrum measurement traces for individual pulses

This user manual contains a description of the functionality that the application provides, including remote control operation.

Functions that are not discussed in this manual are the same as in the Spectrum application and are described in the R&S FSMR3 User Manual. The latest version is available for download at the product homepage:

Installation

You can find detailed installation instructions in the R&S FSMR3 Getting Started manual or in the Release Notes.

2.1 Starting the pulse application

Pulse measurements require a separate application on the R&S FSMR3.

To activate the R&S FSMR3000 Pulse application

1. Press the [MODE] key on the front panel of the R&S FSMR3.

A dialog box opens that contains all operating modes and applications currently available on your R&S FSMR3.

2. Select the "Pulse" item.

The R&S FSMR3 opens a new measurement channel for the R&S FSMR3000 Pulse application.

The measurement is started immediately with the default settings. It can be configured in the Pulse "Overview" dialog box, which is displayed when you select the "Overview" softkey from any menu (see [Chapter 5.1, "Configuration overview", on page 55](#)).

Multiple Measurement Channels and Sequencer Function

When you activate an application, a new measurement channel is created which determines the measurement settings for that application. The same application can be activated with different measurement settings by creating several channels for the same application.

The number of channels that can be configured at the same time depends on the available memory on the instrument.

Only one measurement can be performed at any time, namely the one in the currently active channel. However, in order to perform the configured measurements consecutively, a Sequencer function is provided.

If activated, the measurements configured in the currently active channels are performed one after the other in the order of the tabs. The currently active measurement is indicated by a  symbol in the tab label. The result displays of the individual channels are updated in the tabs (including the "MultiView") as the measurements are performed. Sequential operation itself is independent of the currently *displayed* tab.

For details on the Sequencer function see the R&S FSMR3 User Manual.

2.2 Understanding the display information

The following figure shows a measurement diagram during analyzer operation. All different information areas are labeled. They are explained in more detail in the following sections.

- 1 = Channel bar for firmware and measurement settings
- 2+3 = Window title bar with diagram-specific (trace) information
- 4 = Diagram area
- 5 = Diagram footer with diagram-specific information, depending on measurement
- 6 = Instrument status bar with error messages, progress bar and date/time display

Channel bar information

In the R&S FSMR3000 Pulse application, the R&S FSMR3 shows the following settings:

Table 2-1: Information displayed in the channel bar in the R&S FSMR3000 Pulse application

Ref Level	Reference level
Att *)	RF attenuation
Freq *)	Center frequency for the RF signal
Meas Time	Measurement time (data acquisition time)
Meas BW *)	Measurement bandwidth
SRate	Sample rate
SGL	The sweep is set to single sweep mode.

*) If the input source is an I/Q data file, most measurement settings related to data acquisition are not known and thus not displayed.

In addition, the channel bar also displays information on instrument settings that affect the measurement results even though this is not immediately apparent from the display of the measured values (e.g. transducer or trigger settings). This information is dis-

played only when applicable for the current measurement. For details see the R&S FSMR3 Getting Started manual.

Window title bar information

For each diagram, the header provides the following information:

Figure 2-1: Window title bar information in the R&S FSMR3000 Pulse application

1 = Window number

2 = Window type

3 = Trace color

4 = Trace number

6 = Trace mode

Diagram footer information

The diagram footer (beneath the diagram) contains the start and stop values for the displayed time range.

Status bar information

Global instrument settings, the instrument status and any irregularities are indicated in the status bar beneath the diagram. Furthermore, the progress of the current operation is displayed in the status bar.

3 Measurements and result displays

During a pulse measurement, I/Q data from the input signal is captured for a specified time or for a specified record length. Pulses are detected from the signal according to specified thresholds and user-defined criteria. The measured signal is then compared with the ideal signal described by the user and any deviations are recorded. The defined range of measured data is then evaluated to determine characteristic pulse parameters. These parameters can either be displayed as traces, in a table, or be evaluated statistically over a series of measurements.

Measurement range vs. result range vs. detection range

The **measurement range** defines which part of an *individual pulse* is measured (for example for frequency deviation), whereas the **result range** determines which data is **displayed** on the screen in the form of amplitude, frequency or phase vs. time traces.

The **detection range** (if enabled) determines which part of the *capture buffer* is analyzed. The pulse numbers in the result displays are always relative to the current detection range, that is: pulse number 1 is the first pulse within the detection range in the capture buffer. If disabled (default), the entire capture buffer is used as the detection range. See also "[Detection range](#)" on page 46.

- [Pulse parameters](#).....15
- [Evaluation methods for pulse measurements](#).....29

3.1 Pulse parameters

The pulse parameters to be measured are based primarily on the IEEE 181 Standard 181-2003. For detailed descriptions refer to the standard documentation ("IEEE Standard on Transitions, Pulses, and Related Waveforms", from the IEEE Instrumentation and Measurement (I&M) Society, 7 July 2003).

The following graphic illustrates the main pulse parameters and characteristic values. (For a definition of the values used to determine the measured pulse parameters see [Chapter 4.1, "Parameter definitions"](#), on page 41.)

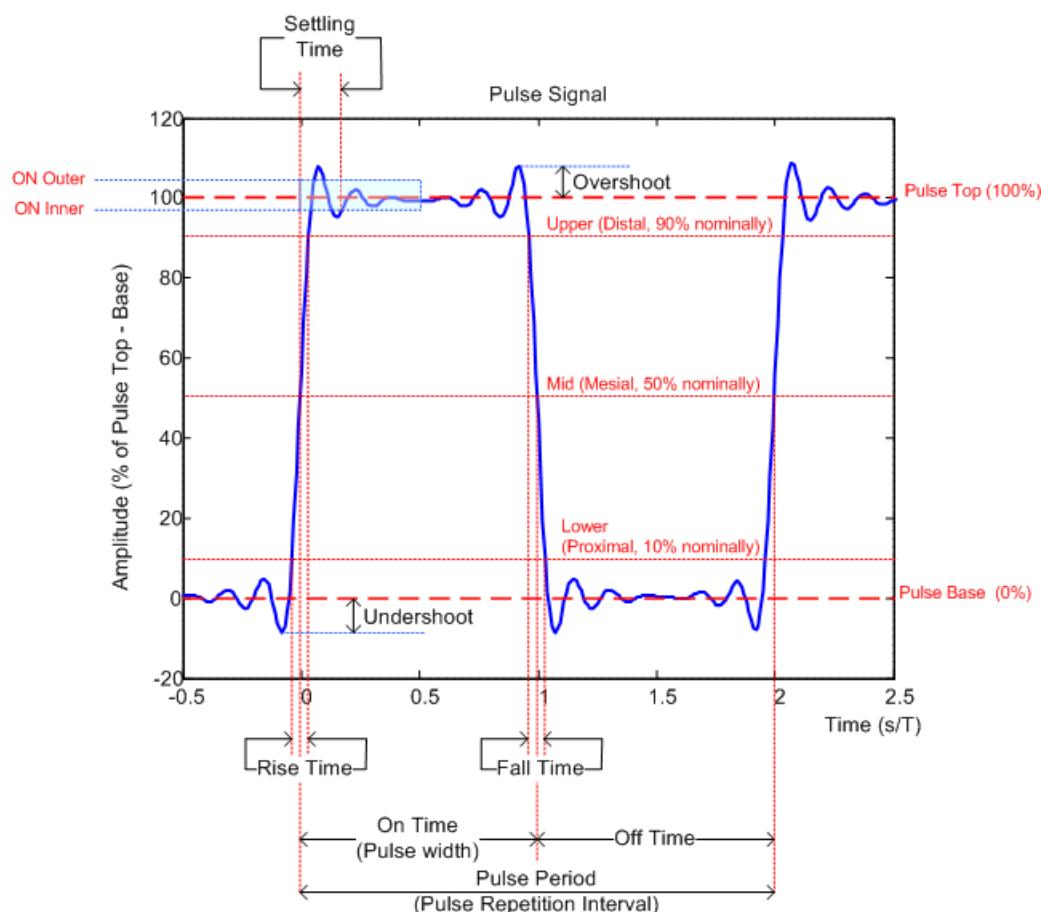

Figure 3-1: Definition of the main pulse parameters and characteristic values

In order to obtain these results, select the corresponding parameter in the result configuration (see [Chapter 6.1, "Result configuration", on page 87](#)) or apply the required SCPI parameter to the remote command (see [Chapter 9.12, "Configuring the results", on page 170](#) and [Chapter 9.16, "Retrieving results", on page 260](#)).

- [Timing parameters](#)..... 16
- [Power/amplitude parameters](#)..... 19
- [Frequency parameters](#)..... 23
- [Phase parameters](#)..... 24
- [Envelope model \(cardinal data points\) parameters](#)..... 25

3.1.1 Timing parameters

The following timing parameters can be determined by the R&S FSMR3000 Pulse application.

Timestamp	17
Settling Time	17
Rise Time	17
Fall Time	17

Pulse Width (ON Time).....	18
Off Time.....	18
Duty Ratio.....	18
Duty Cycle (%).....	18
Pulse Repetition Interval.....	18
Pulse Repetition Frequency (Hz).....	19

Timestamp

The time stamp uniquely identifies each pulse in the capture buffer. It is defined as the time from the capture start point to the beginning of the pulse period of the current pulse. (As opposed to the pulse *number*, which is always relative to the start of the detection range, see also "[Detection range](#)" on page 46).

Depending on the user-specified definition of the pulse period, the period begins with the mid-level crossing of the current pulse's rising edge (period: high-to-low) or the mid-level crossing of the previous pulse's falling edge (period low-to-high). See also "[Pulse Period](#)" on page 58.

Note: For external triggers, the trigger point within the sample (TPIS) is considered in the timestamp (see [TRACe:IQ:TPISample?](#) on page 269).

Remote command:

[SENSe:] PULSe:TIMing:TStamp? on page 295
[CALCulate<n>:TABLE:TIMing:TStamp](#) on page 226
[SENSe:] PULSe:TIMing:TStamp:LIMit? on page 321

Settling Time

The difference between the time at which the pulse exceeds the mid threshold on the rising edge to the point where the pulse waveform remains within the pulse boundary (ON Inner/ ON Outer)

See [Figure 3-1](#)

Remote command:

[SENSe:] PULSe:TIMing:SETTling? on page 294
[CALCulate<n>:TABLE:TIMing:SETTling](#) on page 226
[SENSe:] PULSe:TIMing:SETTling:LIMit? on page 321

Rise Time

The time required for the pulse to transition from the base to the top level. This is the difference between the time at which the pulse exceeds the lower and upper thresholds.

See [Figure 3-1](#)

Remote command:

[SENSe:] PULSe:TIMing:RISE? on page 293
[CALCulate<n>:TABLE:TIMing:RISE](#) on page 226
[SENSe:] PULSe:TIMing:RISE:LIMit? on page 320

Fall Time

The time required for the pulse to transition from the top to the base level. This is the difference between the time at which the pulse drops below the upper and lower thresholds.

See [Figure 3-1](#)

Remote command:

[SENSe:] PULSe:TIMing:FALL? on page 289
CALCulate<n>:TABLE:TIMing:FALL on page 225
[SENSe:] PULSe:TIMing:FALL:LIMit? on page 320

Pulse Width (ON Time)

The time that the pulse remains at the top level ("ON"). This is the time between the first positive edge and the subsequent negative edge of the pulse in seconds, where the edges occur at crossings of the mid threshold.

See [Figure 3-1](#)

Remote command:

[SENSe:] PULSe:TIMing:PWIDth? on page 293
CALCulate<n>:TABLE:TIMing:PWIDth on page 226
[SENSe:] PULSe:TIMing:PWIDth:LIMit? on page 320

Off Time

The time that the pulse remains at the base level ("OFF"). This is the time between the first negative edge and the subsequent positive edge of the pulse in seconds, where the edges occur at crossings of the mid threshold.

See [Figure 3-1](#)

Remote command:

[SENSe:] PULSe:TIMing:OFF? on page 290
CALCulate<n>:TABLE:TIMing:OFF on page 225
[SENSe:] PULSe:TIMing:OFF:LIMit? on page 320

Duty Ratio

The ratio of the "Pulse Width" to "Pulse Repetition Interval" expressed as a value between 0 and 1 (requires at least two measured pulses)

Remote command:

[SENSe:] PULSe:TIMing:DRATio? on page 289
CALCulate<n>:TABLE:TIMing:DRATio on page 224
[SENSe:] PULSe:TIMing:DRATio:LIMit? on page 320

Duty Cycle (%)

The ratio of the "Pulse Width" to "Pulse Repetition Interval" expressed as a percentage (requires at least two measured pulses)

Remote command:

[SENSe:] PULSe:TIMing:DCYCLE? on page 288
CALCulate<n>:TABLE:TIMing:DCYCLE on page 224
[SENSe:] PULSe:TIMing:DCYCLE:LIMit? on page 320

Pulse Repetition Interval

The time between two consecutive edges of the same polarity in seconds (requires at least two measured pulses). The user-specified definition of the pulse period (see "[Pulse Period](#)" on page 58) determines whether this value is calculated from consecutive rising or falling edges.

Remote command:

[SENSe:] PULSe:TIMing:PRI? on page 292
 CALCulate<n>:TABLE:TIMing:PRI on page 225
 [SENSe:] PULSe:TIMing:PRI:LIMit? on page 320

Pulse Repetition Frequency (Hz)

The frequency of occurrence of pulses, i.e. inverse of the "Pulse Repetition Interval" (requires at least two measured pulses)

Remote command:

[SENSe:] PULSe:TIMing:PRF? on page 291
 CALCulate<n>:TABLE:TIMing:PRF on page 225
 [SENSe:] PULSe:TIMing:PRF:LIMit? on page 320

3.1.2 Power/amplitude parameters

The following power/amplitude parameters can be determined by the R&S FSMR3000 Pulse application.

Top Power.....	19
Base Power.....	19
Pulse Amplitude.....	20
In-Phase Amplitude/Quadrature Amplitude.....	20
Average ON Power.....	20
Average Tx Power.....	20
Minimum Power.....	20
Peak Power.....	21
Peak-to-Avg ON Power Ratio.....	21
Peak-to-Average Tx Power Ratio.....	21
Peak-to-Min Power Ratio.....	21
Droop.....	21
Ripple.....	22
Overshoot.....	22
Power (at Point).....	22
Pulse-to-Pulse Power Ratio.....	22

Top Power

The median pulse ON power. The value of this parameter is used as a reference (100%) to determine other parameter values such as the rising / falling thresholds. Various algorithms are provided to determine the top power (see "Measurement Algorithm" on page 81).

Remote command:

[SENSe:] PULSe:POWER:TOP? on page 286
 CALCulate<n>:TABLE:POWER:TOP on page 224
 [SENSe:] PULSe:POWER:TOP:LIMit? on page 320

Base Power

The median pulse OFF power. The value of this parameter is used as a reference (0%) to determine other parameter values such as the rising / falling thresholds.

Remote command:

[SENSe:] PULSe:POWER:BASE? on page 276
CALCulate<n>:TABLE:POWER:BASE on page 220
[SENSe:] PULSe:POWER:BASE:LIMit? on page 320

Pulse Amplitude

The difference between the "Top Power" and the "Base Power", calculated in linear power units (W). This value determines the 100% power range (amplitude). This value is converted to dBm for the "Pulse Results" table.

Remote command:

[SENSe:] PULSe:POWER:AMPLitude? on page 273
CALCulate<n>:TABLE:POWER:AMPLitude on page 219
[SENSe:] PULSe:POWER:AMPLitude:LIMit? on page 320

In-Phase Amplitude/Quadrature Amplitude

The pulse in-phase or quadrature amplitude as a voltage, measured at the measurement point of the pulse (see [Chapter 5.9.2, "Measurement point", on page 82](#)). Values range from -10 mV to +10 mV.

Remote command:

Querying results:

[SENSe:] PULSe:POWER:AMPLitude:I? on page 274
[SENSe:] PULSe:POWER:AMPLitude:Q? on page 275

Including results in result summary table:

CALCulate<n>:TABLE:POWER:AMPLitude:I on page 219
CALCulate<n>:TABLE:POWER:AMPLitude:Q on page 220

Querying limit check results:

[SENSe:] PULSe:POWER:AMPLitude:I:LIMit? on page 320
[SENSe:] PULSe:POWER:AMPLitude:Q:LIMit? on page 320

Average ON Power

The average power during the pulse ON time

Remote command:

[SENSe:] PULSe:POWER:ON? on page 278
CALCulate<n>:TABLE:POWER:ON on page 221
[SENSe:] PULSe:POWER:ON:LIMit? on page 320

Average Tx Power

The average transmission power over the entire pulse ON + OFF time

Remote command:

[SENSe:] PULSe:POWER:AVG? on page 275
CALCulate<n>:TABLE:POWER:AVG on page 220
[SENSe:] PULSe:POWER:AVG:LIMit? on page 320

Minimum Power

The minimum power over the entire pulse ON + OFF time

Remote command:

[SENSe:] PULSe:POWER:MIN? on page 278
CALCulate<n>:TABLE:POWER:MIN on page 221
[SENSe:] PULSe:POWER:MIN:LIMit? on page 320

Peak Power

The maximum power over the entire pulse ON + OFF time

Remote command:

[SENSe:] PULSe:POWER:MAX? on page 277
CALCulate<n>:TABLE:POWER:MAX on page 220
[SENSe:] PULSe:POWER:MAX:LIMit? on page 320

Peak-to-Avg ON Power Ratio

The ratio of maximum to average power over the pulse ON time (also known as **crest factor**)

Remote command:

[SENSe:] PULSe:POWER:PON? on page 283
CALCulate<n>:TABLE:POWER:PON on page 222
[SENSe:] PULSe:POWER:PON:LIMit? on page 320

Peak-to-Average Tx Power Ratio

The ratio of maximum to average power over the entire pulse ON + OFF interval.

Remote command:

[SENSe:] PULSe:POWER:PAVG? on page 281
CALCulate<n>:TABLE:POWER:PAVG on page 222
[SENSe:] PULSe:POWER:PAVG:LIMit? on page 320

Peak-to-Min Power Ratio

The ratio of maximum to minimum power over the entire pulse ON + OFF time

Remote command:

[SENSe:] PULSe:POWER:PMIN? on page 281
CALCulate<n>:TABLE:POWER:PMIN on page 222
[SENSe:] PULSe:POWER:PMIN:LIMit? on page 320

Droop

The rate at which the pulse top level decays, calculated as the difference between the power at the beginning of the pulse ON time and the power at the end of the pulse ON time, divided by the pulse amplitude.

Droop values are only calculated if [Pulse Has Droop](#) is set to "On" (default).

For more information see [Chapter 4.1.1, "Amplitude droop"](#), on page 42

Note: The percentage ratio values are calculated in %V if the "Measurement Level" is defined in V (see ["Reference Level Unit"](#) on page 81), otherwise in %W.

Remote command:

[SENSe:] PULSe:POWER:ADRoop:DB? on page 272
[SENSe:] PULSe:POWER:ADRoop[:PERCent]? on page 272
CALCulate<n>:TABLE:POWER:ADRoop:DB on page 218

[CALCulate<n>:TABLE:POWer:ADRoop\[:PERCent\]](#) on page 219

[\[SENSe:\] PULSe:POWER:ADRoop:DB:LIMit?](#) on page 320

[\[SENSe:\] PULSe:POWER:ADRoop\[:PERCent\]:LIMit?](#) on page 320

Ripple

The ripple is calculated as the difference between the maximum and minimum deviation from the pulse top reference, within a user specified interval.

For more information see [Chapter 4.1.2, "Ripple"](#), on page 42

Note: The percentage ratio values are calculated in %V if the "Measurement Level" is defined in V (see "[Reference Level Unit](#)" on page 81), otherwise in %W.

Remote command:

[\[SENSe:\] PULSe:POWER:RIPPLE:DB?](#) on page 285

[\[SENSe:\] PULSe:POWER:RIPPLE\[:PERCent\]?](#) on page 285

[CALCulate<n>:TABLE:POWer:RIPPLE:DB](#) on page 223

[CALCulate<n>:TABLE:POWer:RIPPLE\[:PERCent\]](#) on page 223

[\[SENSe:\] PULSe:POWER:RIPPLE:DB:LIMit?](#) on page 320

[\[SENSe:\] PULSe:POWER:RIPPLE\[:PERCent\]:LIMit?](#) on page 320

Overshoot

The height of the local maximum after a rising edge, divided by the pulse amplitude.

For more information see [Chapter 4.1.3, "Overshoot"](#), on page 44.

Note: The percentage ratio values are calculated in %V if the "Measurement Level" is defined in V (see "[Reference Level Unit](#)" on page 81), otherwise in %W.

Remote command:

[\[SENSe:\] PULSe:POWER:OVERshoot:DB?](#) on page 279

[\[SENSe:\] PULSe:POWER:OVERshoot\[:PERCent\]?](#) on page 280

[CALCulate<n>:TABLE:POWer:OVERshoot:DB](#) on page 221

[CALCulate<n>:TABLE:POWer:OVERshoot\[:PERCent\]](#) on page 221

[\[SENSe:\] PULSe:POWER:OVERshoot:DB:LIMit?](#) on page 320

[\[SENSe:\] PULSe:POWER:OVERshoot\[:PERCent\]:LIMit?](#) on page 320

Power (at Point)

The power measured at the pulse "measurement point" specified by the [Measurement Point Reference](#) and the "[Offset](#)" on page 83

Remote command:

[\[SENSe:\] PULSe:POWER:POINT?](#) on page 282

[CALCulate<n>:TABLE:POWer:POINT](#) on page 222

[\[SENSe:\] PULSe:POWER:POINT:LIMit?](#) on page 320

Pulse-to-Pulse Power Ratio

The ratio of the "Power" values from the first measured pulse to the current pulse.

Remote command:

[\[SENSe:\] PULSe:POWER:PPRatio?](#) on page 284

[CALCulate<n>:TABLE:POWer:PPRatio](#) on page 223

[\[SENSe:\] PULSe:POWER:PPRatio:LIMit?](#) on page 320

3.1.3 Frequency parameters

The following frequency parameters can be determined by the R&S FSMR3000 Pulse application.

Frequency	23
Pulse-Pulse Frequency Difference	23
Frequency Error (RMS)	23
Frequency Error (Peak)	23
Frequency Deviation	24
Chirp Rate	24

Frequency

Frequency of the pulse measured at the defined [Measurement point](#)

Remote command:

[\[SENSe:\] PULSe:FREQuency:POINT?](#) on page 299
[CALCulate<n>:TABLE:FREQuency:POINT](#) on page 216
[\[SENSe:\] PULSe:FREQuency:POINT:LIMit?](#) on page 320

Pulse-Pulse Frequency Difference

Difference in frequency between the first measured pulse and the currently measured pulse

Remote command:

[\[SENSe:\] PULSe:FREQuency:PPFREQuency?](#) on page 299
[CALCulate<n>:TABLE:FREQuency:PPFREQuency](#) on page 216
[\[SENSe:\] PULSe:FREQuency:PPFREQuency:LIMit?](#) on page 320

Frequency Error (RMS)

The RMS frequency error of the currently measured pulse. The error is calculated relative to the given pulse modulation. It is not calculated at all for modulation type "Arbitrary". The error is calculated over the [Measurement range](#).

Remote command:

[\[SENSe:\] PULSe:FREQuency:RERRor?](#) on page 300
[CALCulate<n>:TABLE:FREQuency:RERRor](#) on page 216
[\[SENSe:\] PULSe:FREQuency:RERRor:LIMit?](#) on page 320

Frequency Error (Peak)

The peak frequency error of the currently measured pulse. The error is calculated relative to the given pulse modulation. It is not calculated at all for modulation type "Arbitrary". The error is calculated over the [Measurement range](#).

Remote command:

[\[SENSe:\] PULSe:FREQuency:PERRor?](#) on page 298
[CALCulate<n>:TABLE:FREQuency:PERRor](#) on page 216
[\[SENSe:\] PULSe:FREQuency:PERRor:LIMit?](#) on page 320

Frequency Deviation

The frequency deviation of the currently measured pulse. The deviation is calculated as the absolute difference between the maximum and minimum frequency values within the [Measurement range](#).

Remote command:

[\[SENSe:\] PULSe:FREQuency:DEViation?](#) on page 297
[CALCulate<n>:TABLE:FREQuency:DEViation](#) on page 215
[\[SENSe:\] PULSe:FREQuency:DEViation:LIMit?](#) on page 320

Chirp Rate

A known frequency chirp rate (per μs) to be used for generating an ideal pulse waveform.

Note: a chirp rate is only available for the [Pulse Modulation](#) type "Linear FM".

Remote command:

[\[SENSe:\] PULSe:FREQuency:CRATE?](#) on page 296
[CALCulate<n>:TABLE:FREQuency:CRATE](#) on page 215
[\[SENSe:\] PULSe:FREQuency:CRATE:LIMit?](#) on page 320

3.1.4 Phase parameters

The following phase parameters can be determined by the R&S FSMR3000 Pulse application.

Phase.....	24
Pulse-Pulse Phase Difference.....	24
Phase Error (RMS).....	25
Phase Error (Peak).....	25
Phase Deviation.....	25

Phase

Phase of the pulse measured at the defined [Measurement point](#)

Remote command:

[\[SENSe:\] PULSe:PHASe:POINT?](#) on page 303
[CALCulate<n>:TABLE:PHASe:POINT](#) on page 217
[\[SENSe:\] PULSe:PHASe:POINT:LIMit?](#) on page 320

Pulse-Pulse Phase Difference

Difference in phase between the first measured pulse and the currently measured pulse

Remote command:

[\[SENSe:\] PULSe:PHASe:PPPHase?](#) on page 304
[CALCulate<n>:TABLE:PHASe:PPPHase](#) on page 218
[\[SENSe:\] PULSe:PHASe:PPPHase:LIMit?](#) on page 320

Phase Error (RMS)

The RMS phase error of the currently measured pulse. The error is calculated relative to the given pulse modulation. It is not calculated at all for the [Pulse Modulation](#) type "Arbitrary". The error is calculated over the [Measurement range](#).

Remote command:

[\[SENSe:\] PULSe:PHASe:RERRor?](#) on page 305
[CALCulate<n>:TABLE:PHASe:RERRor](#) on page 218
[\[SENSe:\] PULSe:PHASe:RERRor:LIMit?](#) on page 320

Phase Error (Peak)

The peak phase error of the currently measured pulse. The error is calculated relative to the given pulse modulation. It is not calculated at all for the [Pulse Modulation](#) type "Arbitrary". The error is calculated over the [Measurement range](#).

Remote command:

[\[SENSe:\] PULSe:PHASe:PERRor?](#) on page 302
[CALCulate<n>:TABLE:PHASe:PERRor](#) on page 217
[\[SENSe:\] PULSe:PHASe:PERRor:LIMit?](#) on page 320

Phase Deviation

The phase deviation of the currently measured pulse. The deviation is calculated as the absolute difference between the maximum and minimum phase values within the [Measurement range](#).

Remote command:

[\[SENSe:\] PULSe:PHASe:DEViation?](#) on page 302
[CALCulate<n>:TABLE:PHASe:DEViation](#) on page 217
[\[SENSe:\] PULSe:PHASe:DEViation:LIMit?](#) on page 320

3.1.5 Envelope model (cardinal data points) parameters

The pulse envelope model has the shape of a trapezoid of amplitude (V) versus time (s) values. This model allows for a finite rise and fall time, as well as an amplitude droop across the top of the pulse. During measurement of each pulse, the points of this trapezoidal model are determined as the basis for further measurements. For example, the rise and fall time amplitude thresholds or the "pulse top" duration are determined from the parameters of the envelope model.

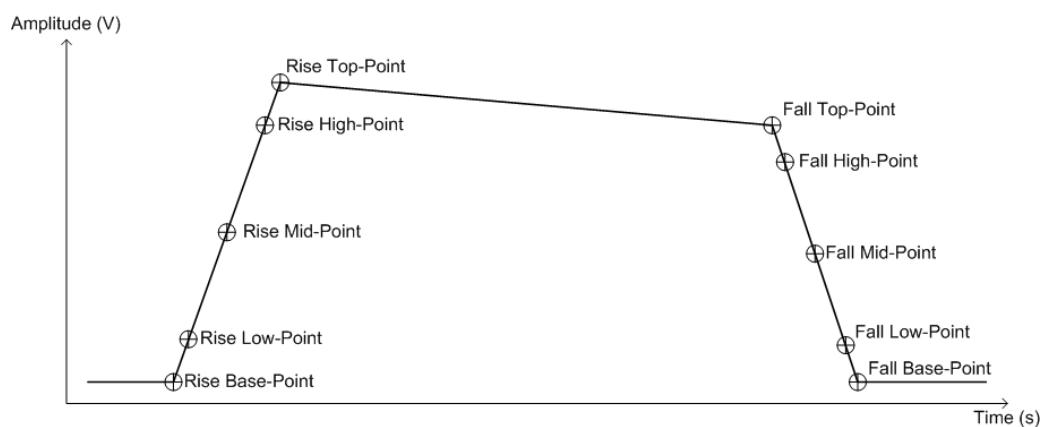

Figure 3-2: Envelope model parameters

Each of these parameters has a time and an amplitude value. The time values are relative to the pulse timestamp and displayed in seconds. The amplitude values are displayed as power in dBm units.

You configure the desired high, mid and low thresholds for the rise and fall slopes relative to the base (0%) and top (100%) levels. See [Chapter 5.9.1, "Measurement levels"](#), on page 79.

The power value of the rise base point and the fall base point is assumed to be equal and is defined by the "Base Power" parameter found in the "Amplitude Parameters" group of the table configuration (see ["Base Power"](#) on page 19).

Rise Base Point Time	26
Rise Low Point Time	27
Rise Mid Point Time	27
Rise High Point Time	27
Rise Top Point Time	27
Rise Low Point Level	27
Rise Mid Point Level	27
Rise High Point Level	28
Rise Top Point Level	28
Fall Base Point Time	28
Fall Low Point Time	28
Fall Mid Point Time	28
Fall High Point Time	28
Fall Top Point Time	28
Fall Low Point Level	29
Fall Mid Point Level	29
Fall High Point Level	29
Fall Top Point Level	29

Rise Base Point Time

The time the amplitude starts rising above 0 %.

Remote command:

[SENSe:] PULSe:EMODel:RBPTime? on page 313
CALCulate<n>:TABLE:EMODel:RBPTime on page 212
[SENSe:] PULSe:EMODel:RBPTime:LIMit? on page 319

Rise Low Point Time

The time the amplitude reaches the **Low (Proximal) Threshold** in the rising edge.

Remote command:

[SENSe:] PULSe:EMODel:RLPTime? on page 316
CALCulate<n>:TABLE:EMODel:RLPTime on page 213

CALCulate<n>:TABLE:EMODel:RMPTime on page 214
[SENSe:] PULSe:EMODel:RMPTime:LIMit? on page 320

Rise High Point Time

The time the amplitude reaches the **High (Distal) Threshold** in the rising edge.

Remote command:

[SENSe:] PULSe:EMODel:RHPTime? on page 315
CALCulate<n>:TABLE:EMODel:RHPTime on page 213
[SENSe:] PULSe:EMODel:RHPTime:LIMit? on page 320

Rise Top Point Time

The time the amplitude reaches the 100 % level in the rising edge.

Remote command:

[SENSe:] PULSe:EMODel:RTPTime? on page 319
CALCulate<n>:TABLE:EMODel:RTPTime on page 215
[SENSe:] PULSe:EMODel:RTPTime:LIMit? on page 320

Rise Low Point Level

The amplitude of the **Low (Proximal) Threshold** in the rising edge.

Remote command:

[SENSe:] PULSe:EMODel:RLPLevel? on page 315
CALCulate<n>:TABLE:EMODel:RLPLevel on page 213
[SENSe:] PULSe:EMODel:RLPLevel:LIMit? on page 320

Rise Mid Point Level

The amplitude of the **Mid (Mesial) Threshold** in the rising edge.

Remote command:

[SENSe:] PULSe:EMODel:RMPLevel? on page 317
CALCulate<n>:TABLE:EMODel:RMPLevel on page 214
[SENSe:] PULSe:EMODel:RMPLevel:LIMit? on page 320

Rise High Point Level

The amplitude of the [High \(Distal\) Threshold](#) in the rising edge.

Remote command:

[\[SENSe:\] PULSe:EMODel:RHPLevel?](#) on page 314

[CALCulate<n>:TABLE:EMODel:RHPLevel](#) on page 213

[\[SENSe:\] PULSe:EMODel:RHPLevel:LIMit?](#) on page 319

Rise Top Point Level

The amplitude at 100 % in the rising edge.

Remote command:

[\[SENSe:\] PULSe:EMODel:RTPLevel?](#) on page 318

[CALCulate<n>:TABLE:EMODel:RTPLevel](#) on page 214

[\[SENSe:\] PULSe:EMODel:RTPLevel:LIMit?](#) on page 320

Fall Base Point Time

The time the amplitude reaches 0 % on the falling edge.

Remote command:

[\[SENSe:\] PULSe:EMODel:FBPTime?](#) on page 307

[CALCulate<n>:TABLE:EMODel:FBPTime](#) on page 210

[\[SENSe:\] PULSe:EMODel:FBPTime:LIMit?](#) on page 319

Fall Low Point Time

The time the amplitude reaches the [Low \(Proximal\) Threshold](#) in the falling edge.

Remote command:

[\[SENSe:\] PULSe:EMODel:FLPTime?](#) on page 310

[CALCulate<n>:TABLE:EMODel:FLPTime](#) on page 211

[\[SENSe:\] PULSe:EMODel:FLPTime:LIMit?](#) on page 319

Fall Mid Point Time

The time the amplitude reaches the [Mid \(Mesial\) Threshold](#) in the falling edge.

Remote command:

[\[SENSe:\] PULSe:EMODel:FMPTime?](#) on page 311

[CALCulate<n>:TABLE:EMODel:FMPTime](#) on page 212

[\[SENSe:\] PULSe:EMODel:FMPTime:LIMit?](#) on page 319

Fall High Point Time

The time the amplitude reaches the [High \(Distal\) Threshold](#) in the falling edge.

Remote command:

[\[SENSe:\] PULSe:EMODel:FHPTime?](#) on page 309

[CALCulate<n>:TABLE:EMODel:FHPTime](#) on page 211

[\[SENSe:\] PULSe:EMODel:FHPTime:LIMit?](#) on page 319

Fall Top Point Time

The time the amplitude falls below the 100 % level in the falling edge.

Remote command:

[SENSe:] PULSe:EMODel:FTPTime? on page 313
CALCulate<n>:TABLE:EMODel:FTPTime on page 212
[SENSe:] PULSe:EMODel:FTPTime:LIMit? on page 319

Fall Low Point Level

The amplitude of the **Low (Proximal) Threshold** in the falling edge.

Remote command:

[SENSe:] PULSe:EMODel:FLPLevel? on page 309
CALCulate<n>:TABLE:EMODel:FLPLevel on page 211
[SENSe:] PULSe:EMODel:FLPLevel:LIMit? on page 319

Fall Mid Point Level

The amplitude of the **Mid (Mesial) Threshold** in the falling edge.

Remote command:

[SENSe:] PULSe:EMODel:FMPLevel? on page 311
CALCulate<n>:TABLE:EMODel:FMPLevel on page 211
[SENSe:] PULSe:EMODel:FMPLevel:LIMit? on page 319

Fall High Point Level

The amplitude of the **High (Distal) Threshold** in the falling edge.

Remote command:

CALCulate<n>:TABLE:EMODel:FHPLevel on page 210
[SENSe:] PULSe:EMODel:FHPLevel:LIMit? on page 319

Fall Top Point Level

The amplitude at 100 % in the falling edge.

Remote command:

[SENSe:] PULSe:EMODel:FTPLevel? on page 312
CALCulate<n>:TABLE:EMODel:FTPLevel on page 212
[SENSe:] PULSe:EMODel:FTPLevel:LIMit? on page 319

3.2 Evaluation methods for pulse measurements

The data that was measured by the R&S FSMR3000 Pulse application can be evaluated using various different methods.

By default, the Pulse measurement results are displayed in the following windows:

- "Magnitude Capture"
- "Pulse Results"
- "Pulse Frequency"
- "Pulse Magnitude"
- "Pulse Phase"

The following evaluation methods are available for Pulse measurements:

Magnitude Capture	30
Marker Table	31
Parameter Distribution	31
Parameter Spectrum	32
Parameter Trend	32
Pulse Frequency	34
Pulse I and Q	35
Pulse Magnitude	35
Pulse Phase	36
Pulse Phase (Wrapped)	36
Pulse Results	37
Pulse-Pulse Spectrum	38
Pulse Statistics	39
Result Range Spectrum	40

Magnitude Capture

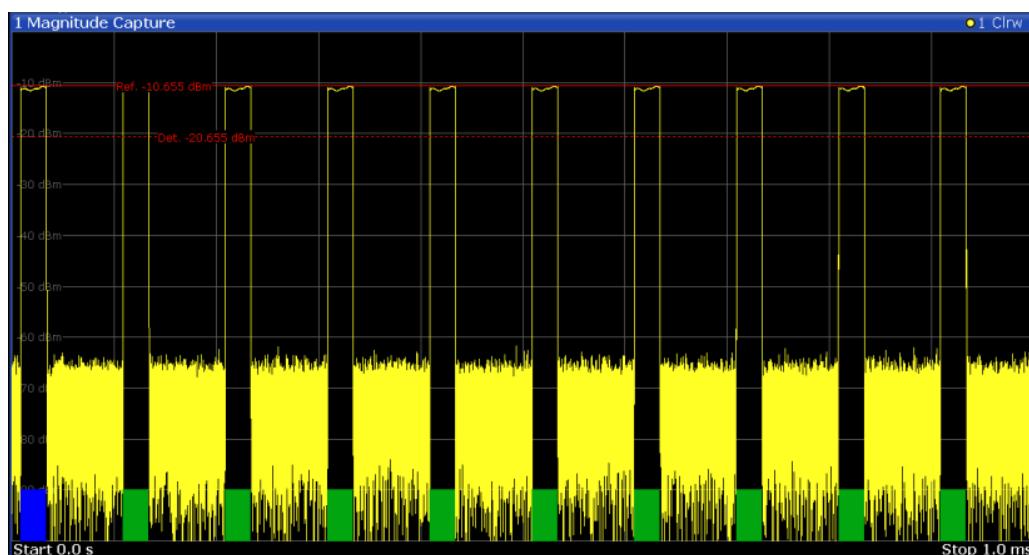

Displays the captured data. Detected pulses are indicated by **green bars** along the x-axis. The currently selected pulse is highlighted in **blue**.

Additionally, the following parameters are indicated by horizontal lines in the diagram:

- "**Ref**": the pulse detection reference level (see [Chapter 5.9.1, "Measurement levels"](#), on page 79)
- "**Det**": the pulse detection threshold (see ["Threshold"](#) on page 78)
- "**100 %**": a fixed top power level (see ["Fixed Value"](#) on page 81)

You can drag the line in the diagram to change the top power level.

The detection range is indicated by vertical lines ("**DR**", see ["Detection Range"](#) on page 78). You can drag the lines within the capture buffer to change the detection range.

Remote command:

`LAY:ADD:WIND '2', RIGH, MCAP` see [LAYout:ADD\[:WINDOW\]?](#) on page 236

Results:

`TRACe<n>[:DATA]` see [on page 260](#)

Marker Table

Displays a table with the current marker values for the active markers.

This table is displayed automatically if configured accordingly.

1 Marker Table							
Wnd	Type	Ref	Trc	X-Value	Y-Value	Function	Function Result
2	M1	1		2.1725 ms	-6.80 dBm		
2	D2	M1	1	13.859 ms	-0.00 dB		
2	D3	M1	1	4.6259 ms	-0.00 dB		
2	D4	M1	1	9.2331 ms	-0.00 dB		

Tip: To navigate within long marker tables, simply scroll through the entries with your finger on the touchscreen.

Remote command:

`LAY:ADD? '1', RIGH, MTAB`, see [LAYout:ADD\[:WINDOW\]?](#) on page 236

Results:

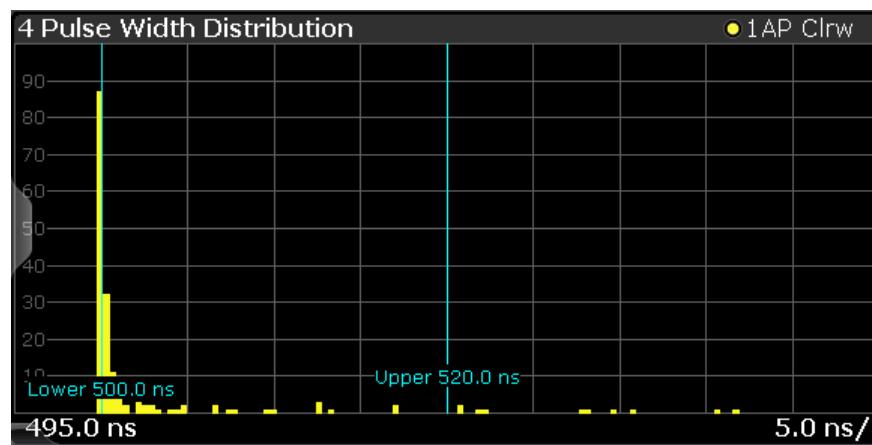

`CALCulate<n>:MARKer<m>:X` see [on page 250](#)

`CALCulate<n>:MARKer<m>:Y?` see [on page 325](#)

Parameter Distribution

Plots a histogram of a particular parameter, i.e. all measured parameter values from the current capture vs pulse count or occurrence in %. Thus you can determine how often a particular parameter value occurs. For each "parameter distribution" window you can configure a different parameter to be displayed.

This evaluation method allows you to distinguish transient and stable effects in a specific parameter, such as a spurious frequency deviation or a fluctuation in power over several pulses.

Note: Limit lines. Optionally, limit lines can be displayed in the "Parameter Distribution" diagram. You can drag these lines to a new position in the window. The new position is maintained, the limit check is repeated, and the results of the limit check in any active table displays are adapted.

Note that averaging is not possible for "parameter distribution" traces.

Remote command:

`LAY:ADD:WIND '2', RIGH, PDIS` see [LAYout:ADD\[:WINDOW\]?](#) on page 236

[Chapter 9.12.3, "Configuring a parameter distribution", on page 172](#)

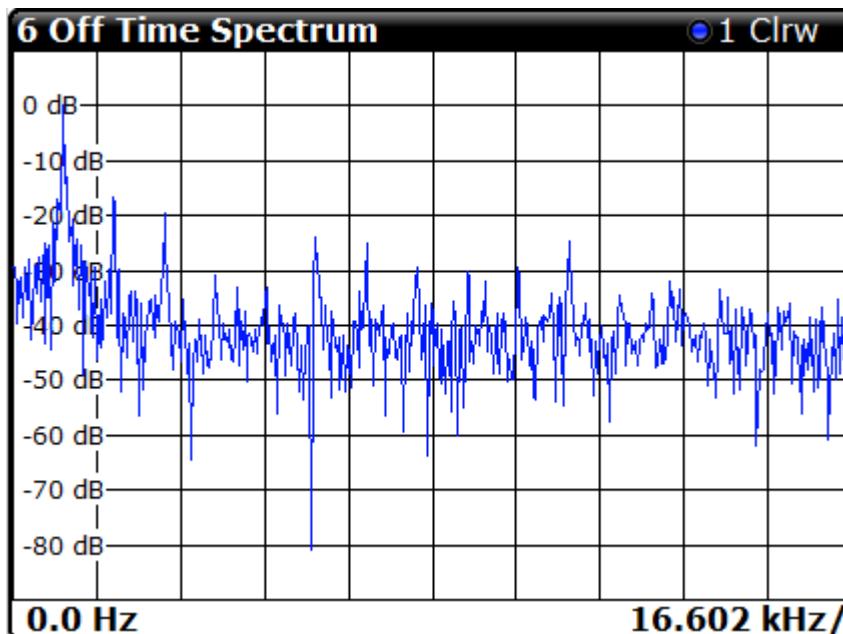

Results:

`TRACe<n>[:DATA]` see [TRACe\[:DATA\]?](#) on page 260

Parameter Spectrum

Calculates an FFT for a selected column of the "Pulse Results" table. This "spectrum" allows you to easily determine the frequency of periodicities in the pulse parameters. For example, the "Parameter Spectrum" for "Pulse Top Power" might display a peak at a particular frequency, indicating incidental amplitude modulation of the amplifier output due to the power supply.

The "Parameter Spectrum" is calculated by taking the magnitude of the FFT of the selected parameter and normalizing the result to the largest peak. In order to calculate the frequency axis the average PRI (pulse repetition interval) is taken to be the "sample rate" for the FFT. Note that in cases where the signal has a non-uniform or staggered PRI the frequency axis must therefore be interpreted with caution.

Remote command:

`LAY:ADD:WIND '2', RIGH, PSP` see [LAYout:ADD\[:WINDOW\]?](#) on page 236

[Chapter 9.12.4, "Configuring a parameter spectrum", on page 179](#)

Results:

`TRACe<n>[:DATA]` see [TRACe\[:DATA\]?](#) on page 260

Parameter Trend

Plots all measured parameter values from the current capture buffer (or detection range, if enabled) vs pulse number or pulse timestamp. This is equivalent to plotting a column of the "Pulse Results" table for the rows highlighted green. This evaluation allows you to determine trends in a specific parameter, such as a frequency deviation or a fluctuation in power over several pulses.

The "parameter trend" evaluation can also be used for a more general scatter plot - the parameters from the current capture buffer cannot only be displayed over time, but also versus any other pulse parameter. For example, you can evaluate the rise time vs fall time.

For each "parameter trend" window you can configure a different parameter to be displayed for both the x-axis and the y-axis, making this a very powerful and flexible analysis tool.

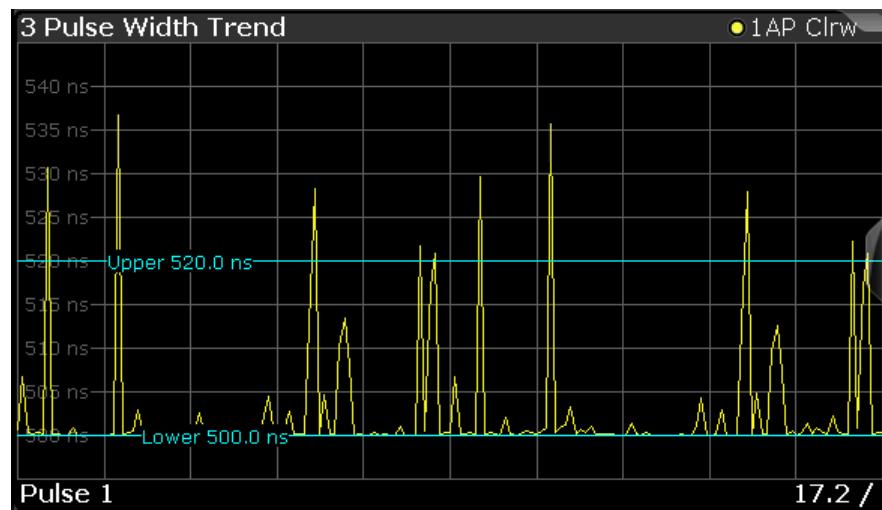

Figure 3-3: Pulse width trend display (over pulse numbers)

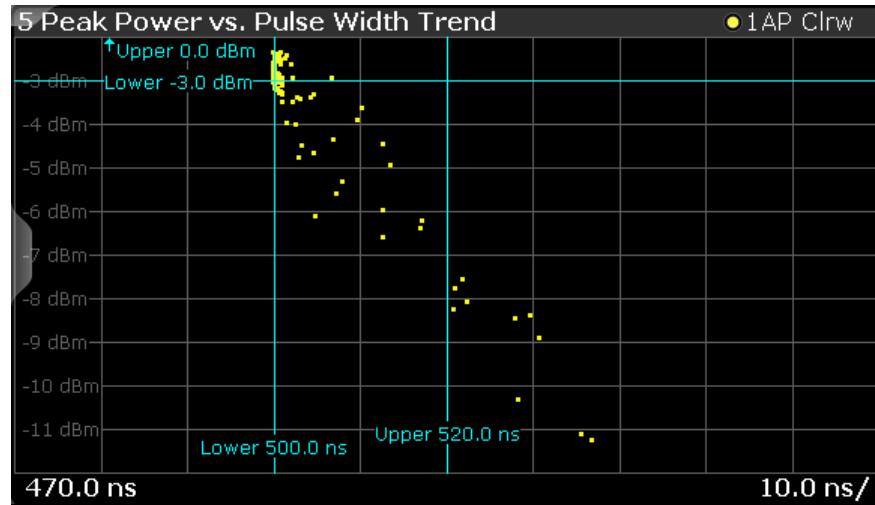

Figure 3-4: Peak power vs pulse width scatter plot

Note: Limit lines. Optionally, limit lines can be displayed in the "Parameter Trend" diagram. You can drag these lines to a new position in the window. The new position is maintained, the limit check is repeated, and the results of the limit check in any active table displays are adapted.

If a limit is defined for a parameter that is displayed in a "Parameter Trend" diagram, the "Auto Scale Once" on page 100 function is not available for the axis this parameter is displayed on (see also "Activating a limit check for a parameter" on page 99). This avoids the rapid movement of the limit lines which would occur if the axis scale changed.

Note that averaging is not possible for "parameter trend" traces.

Note: Setting markers in "Parameter Trend" Displays. In "Parameter Trend" displays, especially when the x-axis unit is not pulse number, positioning a marker by defining its x-axis value can be very difficult or ambiguous. Thus, markers can be positioned by defining the corresponding pulse number in the "Marker" edit field for all parameter trend displays, regardless of the displayed x-axis parameter. The "Marker" edit field is displayed when you select one of the "Marker" softkeys.

However, the position displayed in the marker information area or the marker table is shown in the defined x-axis unit.

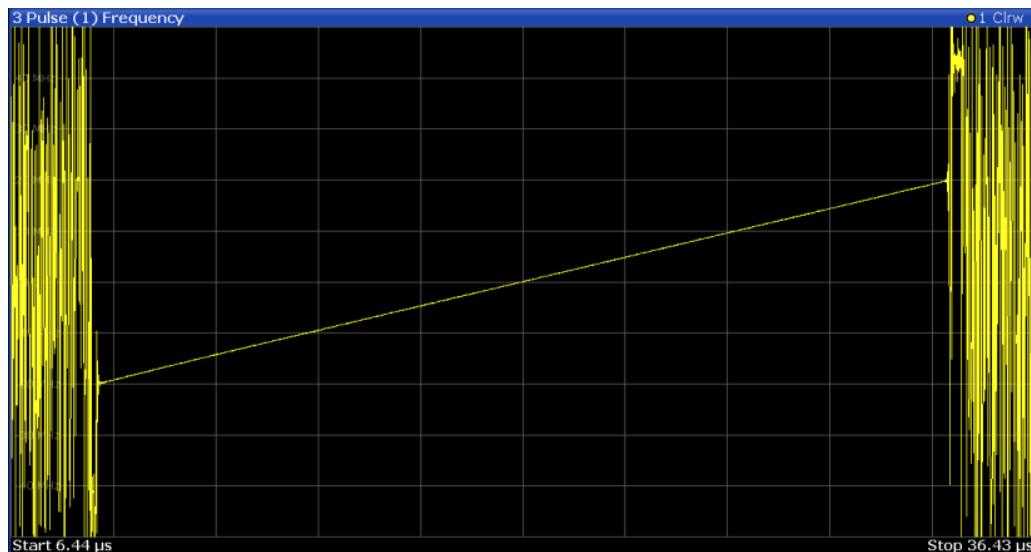

Remote command:

LAY:ADD:WIND '2', RIGH, PTR see [LAYout:ADD\[:WINDOW\] ?](#) on page 236

[Chapter 9.12.6, "Configuring a parameter trend", on page 188](#)

Pulse Frequency

Displays the frequency trace of the selected pulse. The length and alignment of the trace can be configured in the "Result Range" dialog box (see [Chapter 6.1.2, "Result range", on page 88](#)).

Note:

You can apply an additional filter after demodulation to help filter out unwanted signals (see "FM Video Bandwidth" on page 91).

Remote command:

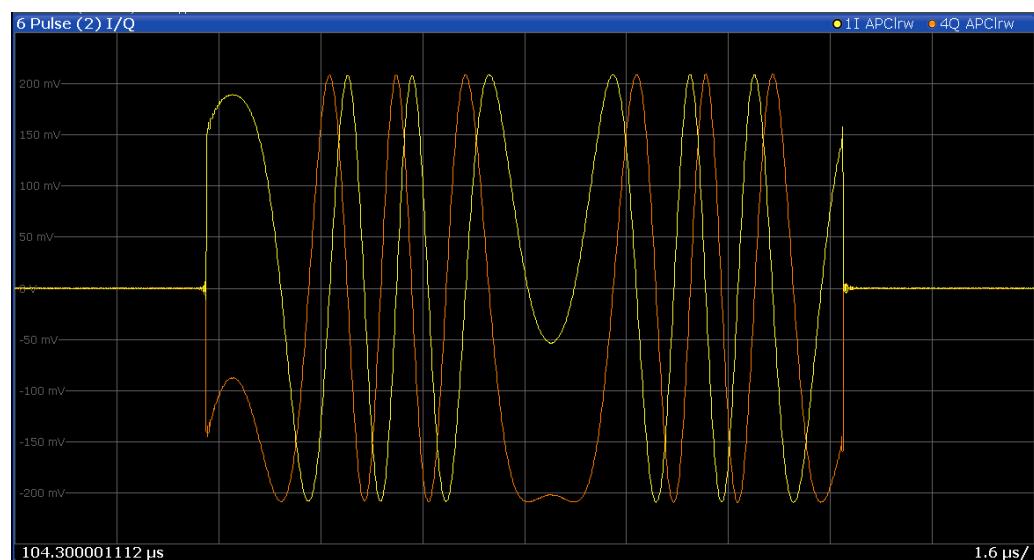

LAY:ADD:WIND '2', RIGH, PFR see [LAYout:ADD\[:WINDOW\] ?](#) on page 236

Results:

[TRACe<n>\[:DATA\] ?](#) on page 260

Pulse I and Q

Displays the magnitude of the I and Q components of the selected pulse versus time as separate traces in one diagram. The length and alignment of the trace can be configured in the "Result Range" dialog box (see [Chapter 6.1.2, "Result range", on page 88](#)).

Remote command:

`LAY:ADD:WIND '2', RIGH, PIAQ` see [LAYout:ADD\[:WINDOW\]?](#) on page 236

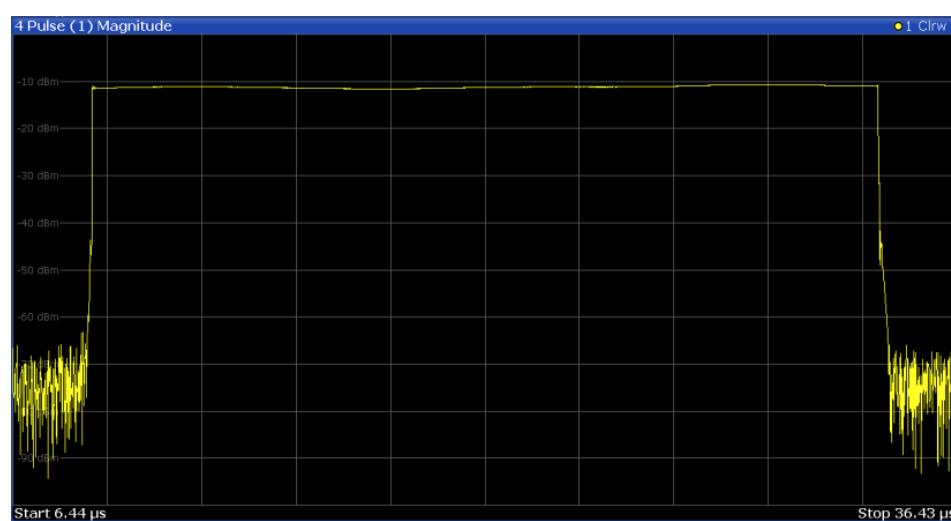

Results:

`[SENSe:] PULSe:POWER:AMPLitude:I?` on page 274

`[SENSe:] PULSe:POWER:AMPLitude:Q?` on page 275

Pulse Magnitude

Displays the magnitude vs. time trace of the selected pulse. The length and alignment of the trace can be configured in the "Result Range" dialog box (see [Chapter 6.1.2, "Result range", on page 88](#)).

Remote command:

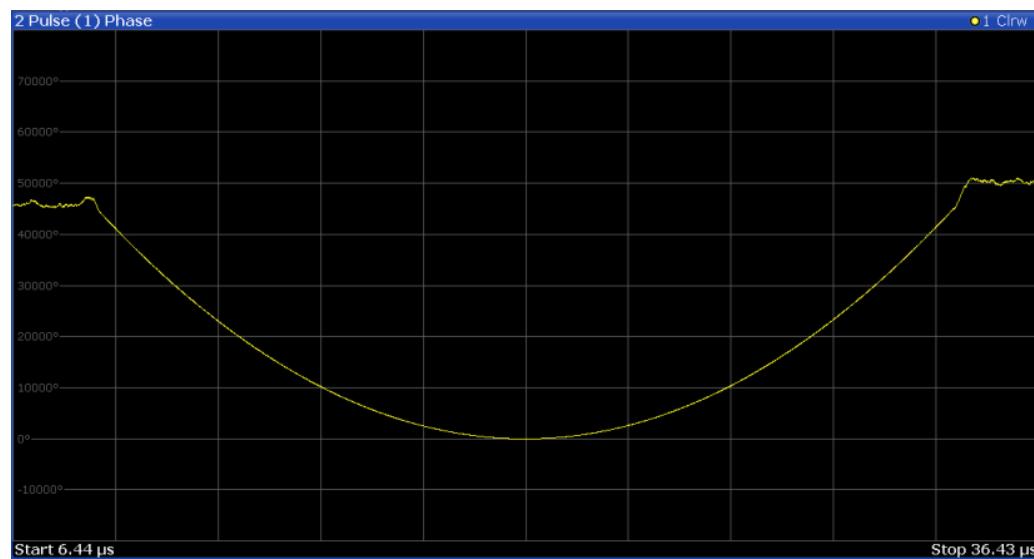

LAY:ADD:WIND '2', RIGH, PMAG see [LAYout:ADD\[:WINDOW\] ? on page 236](#)

Results:

[TRACe<n>\[:DATA\] ? on page 260](#)

Pulse Phase

Displays the phase vs. time trace of the selected pulse. The length and alignment of the trace can be configured in the "Result Range" dialog box (see [Chapter 6.1.2, "Result range", on page 88](#)).

Remote command:

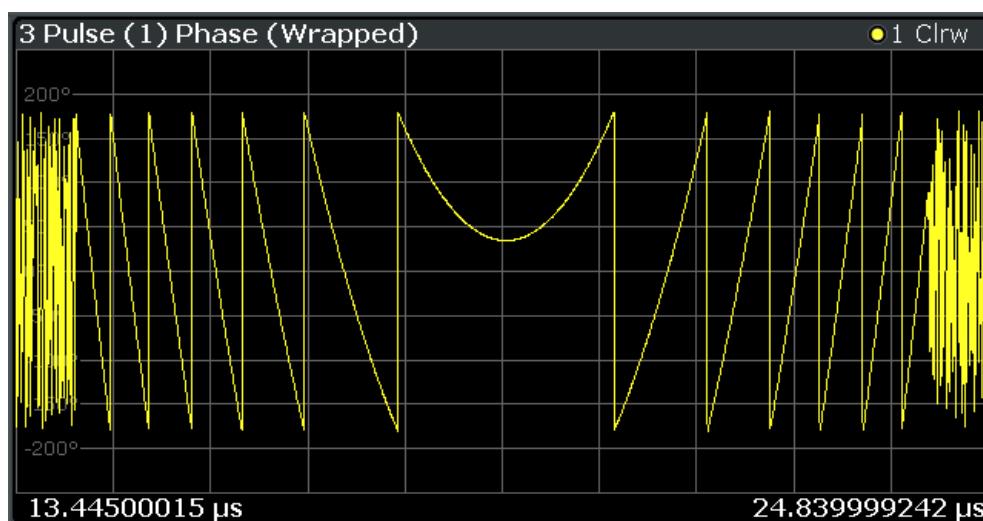

LAY:ADD:WIND '2', RIGH, PPH see [LAYout:ADD\[:WINDOW\] ? on page 236](#)

Results:

[TRACe<n>\[:DATA\] ? on page 260](#)

Pulse Phase (Wrapped)

Displays the *wrapped* phase vs. time trace of the selected pulse. The length and alignment of the trace can be configured in the "Result Range" dialog box (see [Chapter 6.1.2, "Result range", on page 88](#)).

Remote command:

`LAY:ADD:WIND '2', RIGH, PPW` see [LAYOUT:ADD\[:WINDOW\]?](#) on page 236

Results:

`TRACe<n>[:DATA]` ? on page 260

Pulse Results

Displays the measured pulse parameters in a table of results. Which parameters are displayed can be configured in the "Result Configuration" (see [Chapter 6.1, "Result configuration"](#), on page 87). The currently selected pulse is highlighted blue. The pulses contained in the current capture buffer (or detection range, if enabled) are highlighted green. The number of detected pulses in the current capture buffer ("Curr") and the entire measurement ("Total") is indicated in the title bar.

5 Pulse Results									
ID	Pulse No.	Rise Time (ns)	Pulse Width (us)	Duty Cycle (%)	PRI (us)	Freq (kHz)	Phase (deg)	Avg ON Power (dBm)	Avg Tx Power (dBm)
1	1	15.874	24.990	24.990	100.000	62.520	-45.133	-11.160	-17.182
2	2	15.887	24.989	24.989	100.000	68.689	-169.432	-11.160	-17.182
3	3	15.807	24.990	24.990	100.000	80.236	65.311	-11.160	-17.182
4	4	15.832	24.989	24.989	100.000	56.634	-58.796	-11.160	-17.182
5	5	15.858	24.989	24.989	100.000	10.379	176.157	-11.160	-17.182
6	6	15.754	24.989	24.989	100.000	23.151	51.561	-11.160	-17.182
7	7	15.723	24.990	24.990	100.000	37.782	-74.075	-11.161	-17.183

Note:

You can apply an additional filter after demodulation to help filter out unwanted signals (see ["FM Video Bandwidth"](#) on page 91).

Limit check

Optionally, the measured results can be checked against defined limits (see [Chapter 6.1.6.1, "Limit settings for table displays"](#), on page 97). The results of the limit check are indicated in the Pulse Results table as follows:

Table 3-1: Limit check results in the result tables

Display color	Limit check result
White	No limit check active for this parameter
Green	Limit check passed
Red, asterisk before	Limit check failed; limit exceeds lower limit
Red, asterisk behind	Limit check failed; limit exceeds upper limit

ID	Pulse No.	Rise Time (ns)	Pulse Width (us)	PRI (us)	Freq (kHz)	Phase (deg)	Avg ON Power (dBm)	Avg Tx Power (dBm)
1	1	1.298	1.000	1000.000	-34.202	17.029*	-1.156	-7.174
2	2	1.252	1.000	1000.000	148.593*	82.488*	-1.160	-7.178
3	3	*1.144	1.000	1000.000	43.929	147.875*	-1.160	*-7.179

28	28	1.293	1.000	1000.000	-17.347	-17.860	-1.158	-7.176
29	29	*1.224*	1.000	1000.000	2.220	-17.557*	-1.151	*-7.178

Note: The results of the limit check are for informational purposes only; special events such as stopping the measurement are not available.

Note: Optionally, limit lines can be displayed in the **Parameter Distribution** and **Parameter Trend** diagrams. You can drag these lines to a new position in the window. The new position is maintained, the limit check is repeated, and the results of the limit check in any active table displays are adapted.

Pulse-Pulse Spectrum

The pulse-to-pulse spectrum is basically a **Parameter Spectrum**, based on complex I/Q data. The I and Q values for each pulse (taken at the **Measurement Point Reference**) are integrated over all pulses to create a spectrum that consists of positive and negative frequencies. You cannot select a parameter for the spectrum. All other settings are identical to the "parameter spectrum".

The pulse-to-pulse spectrum is useful to analyze small frequency shifts which cannot be detected within an individual pulse, for example Doppler effects.

Pulse Statistics

Displays statistical values (minimum, maximum, average, standard deviation) for the measured pulse parameters in a table of results. The number of evaluated pulses is also indicated. Both the current capture buffer data and the cumulated captured data from a series of measurements are evaluated. The statistics calculated only from pulses within the current capture buffer (or detection range, if enabled) are highlighted green. For reference, the measured parameters from the "Selected Pulse" are also shown, highlighted blue. The displayed parameters are the same as in the "Pulse Results" and can be configured in the "Result Configuration" (see [Chapter 6.1, "Result configuration"](#), on page 87).

Result Range Spectrum

Calculates a power spectrum from the captured I/Q data, within the time interval defined by the result range (see Chapter 6.1.2, "Result range", on page 88).

The "Result Range Spectrum" is calculated using a *Welch periodogram*, which involves averaging the spectrum calculated by overlapping windows.

The shape of the window used for the calculation can be specified. The length of the window is calculated such that a specific resolution bandwidth is obtained.

4 Measurement basics

Some background knowledge on basic terms and principles used in pulse measurements is provided here for a better understanding of the required configuration settings.

● Parameter definitions.....	41
● Pulse detection.....	44
● Parameter spectrum calculation.....	46
● Basics on input from I/Q data files.....	49
● Trace evaluation.....	50

4.1 Parameter definitions

The pulse parameters to be measured are based primarily on the IEEE 181 Standard 181-2003. For detailed descriptions refer to the standard documentation ("IEEE Standard on Transitions, Pulses, and Related Waveforms", from the IEEE Instrumentation and Measurement (I&M) Society, 7 July 2003).

The following definitions are used to determine the measured pulse power parameters:

Value	Description
$L_{0\%}$	The magnitude in V corresponding to the pulse OFF level (base level)
$L_{100\%}$	The magnitude in V corresponding to the pulse ON level (top level)
L_{ov}	The magnitude in V at the peak level occurring directly after the pulse rising edge (mid-level crossing)
L_{rise}	The magnitude in V of the reference model at the top of the rising edge (beginning of the pulse top)
L_{fall}	The magnitude in V of the reference model at the top of the falling edge (end of the pulse top)
L_{rip+}	The magnitude in V corresponding to the largest level above the reference model which occurs within the ripple portion of the pulse top
L_{top+}	The magnitude in V of the reference model at the point in time where L_{rip+} is measured
L_{rip-}	The magnitude in V corresponding to the lowest measured level below the reference model which occurs within the ripple portion of the pulse top
L_{top-}	The magnitude in V of the reference model at the point in time where L_{rip-} is measured

● Amplitude droop.....	42
● Ripple.....	42
● Overshoot.....	44

4.1.1 Amplitude droop

The amplitude droop is calculated as the difference between the power at the beginning of the pulse ON time and the power at the end of the pulse ON time, divided by the pulse amplitude:

$$\text{Droop} (\%V) = \frac{L_{rise} - L_{fall}}{L_{100\%} - L_{0\%}} \times 100$$

$$\text{Droop} (\%W) = \frac{L_{rise}^2 - L_{fall}^2}{L_{100\%}^2 - L_{0\%}^2} \times 100$$

$$\text{Droop (dB)} = 20 \times \log_{10} \left(\frac{L_{rise}}{L_{fall}} \right)$$

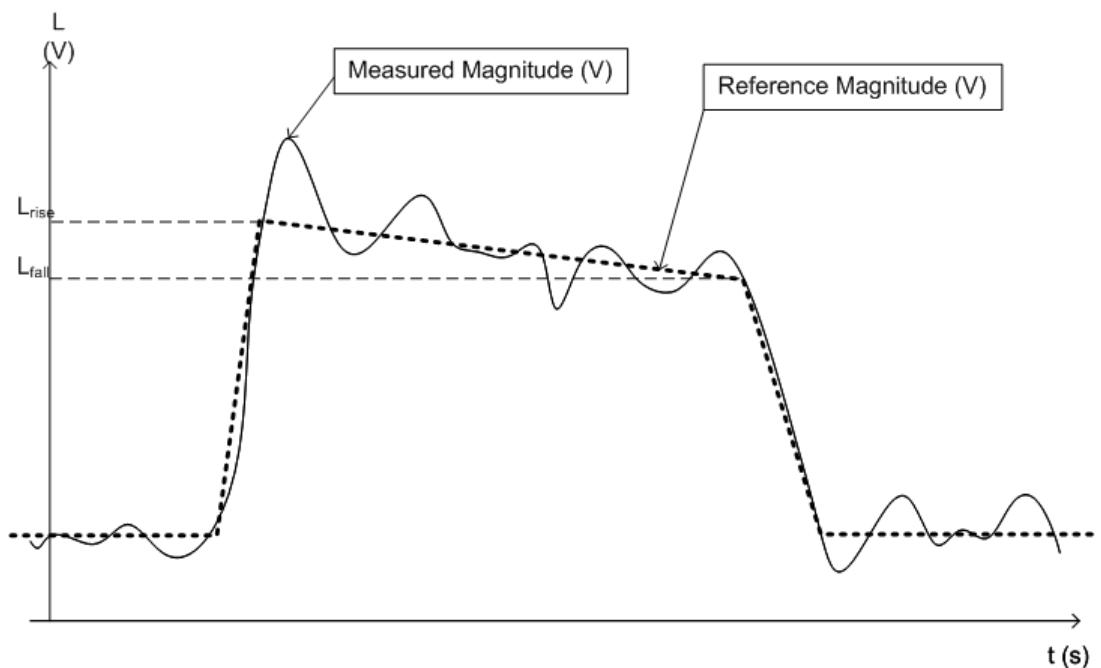

Figure 4-1: Illustration of levels used to define the droop measurement

4.1.2 Ripple

The ripple is calculated as the difference between the maximum and minimum deviation from the pulse top reference, within a user specified interval.

The default behavior compensates for droop in the pulse top using the following formulae:

$$\text{Ripple } (\%) = \frac{|L_{rip+} - L_{top+}| + |L_{top-} - L_{rip-}|}{L_{100\%} - L_{0\%}} \times 100$$

$$\text{Ripple } (\%) = \frac{|L_{rip+}^2 - L_{top+}^2| + |L_{top-}^2 - L_{rip-}^2|}{L_{100\%}^2 - L_{0\%}^2} \times 100$$

$$\text{Ripple } (\text{dB}) = 10 \times \log_{10} \left(\frac{L_{100\%}^2 + |L_{rip+}^2 - L_{top+}^2|}{L_{100\%}^2 - |L_{top-}^2 - L_{rip-}^2|} \right)$$

However, if **Pulse Has Droop** is set to "Off" or the 100 % Level **Position** is set to "Center", then the reference model has a flat pulse top and $L_{top+} = L_{top-} = L_{100\%}$. Thus, the formulae are reduced to:

$$\text{Ripple } (\%) = \frac{L_{rip+} - L_{rip-}}{L_{100\%} - L_{0\%}} \times 100$$

$$\text{Ripple } (\%) = \frac{L_{rip+}^2 - L_{rip-}^2}{L_{100\%}^2 - L_{0\%}^2} \times 100$$

$$\text{Ripple } (\text{dB}) = 20 \times \log_{10} \left(\frac{L_{rip+}}{L_{rip-}} \right)$$

The following illustration indicates the levels used for calculation.

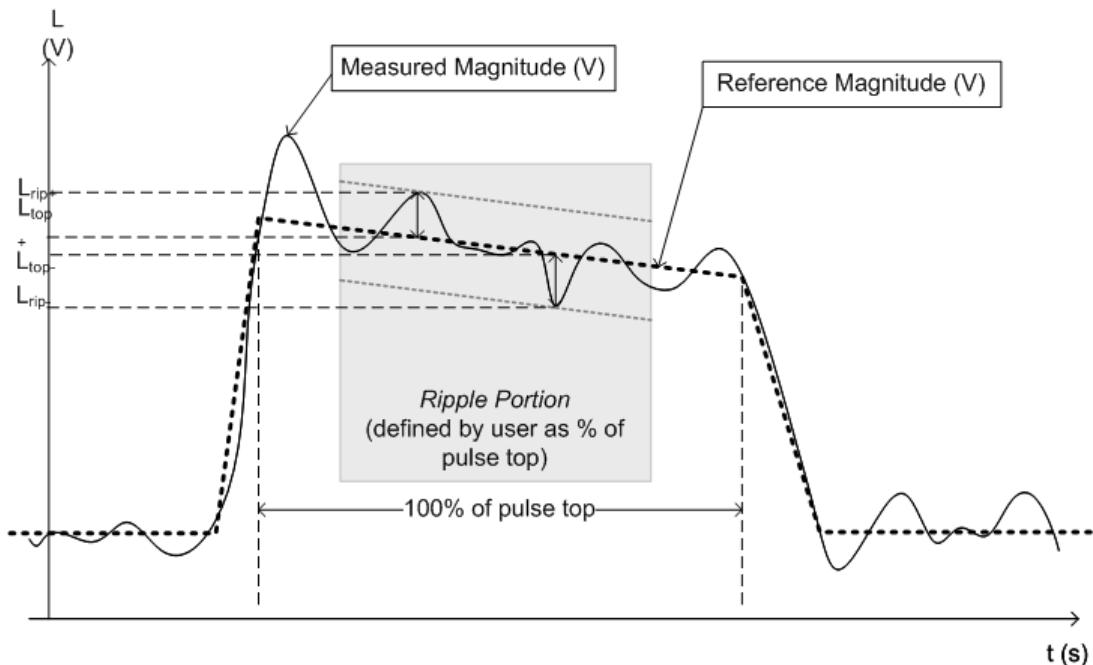

Figure 4-2: Illustration of levels used to define the ripple measurement.

4.1.3 Overshoot

The overshoot is defined as the height of the local maximum after a rising edge, divided by the pulse amplitude:

$$\text{Overshoot } (\%V) = \frac{L_{Ov} - L_{100\%}}{L_{100\%} - L_{0\%}} \times 100$$

$$\text{Overshoot } (\%W) = \frac{L_{Ov}^2 - L_{100\%}^2}{L_{100\%}^2 - L_{0\%}^2} \times 100$$

$$\text{Overshoot } (\text{dB}) = 20 \times \log_{10} \left(\frac{L_{Ov}}{L_{100\%}} \right)$$

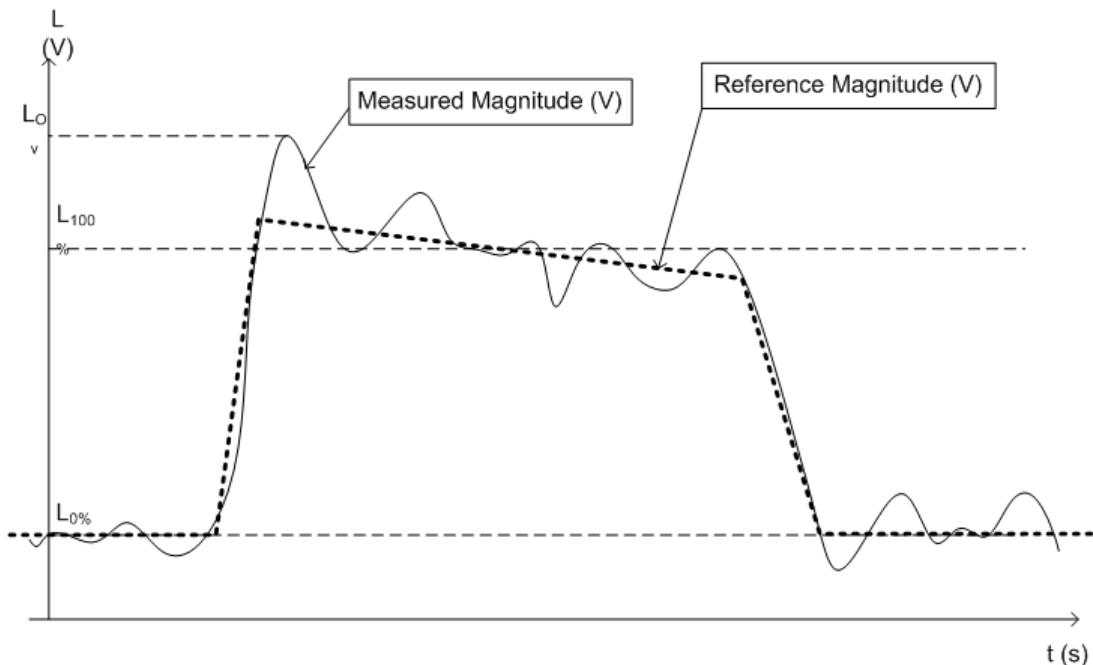

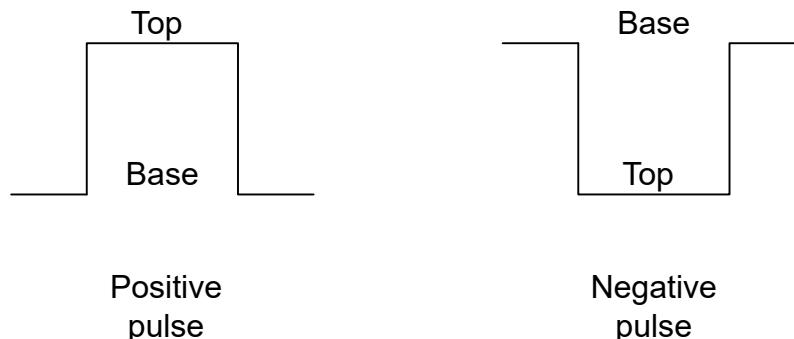

Figure 4-3: Illustration of levels used to define the overshoot measurement

4.2 Pulse detection

A pulsed input signal is a signal whose carrier power is modulated by two states: ON and OFF. Basically, a pulse is detected when the input signal power exceeds a threshold, then falls below that threshold, or vice versa. Pulses that rise to and then remain at a peak (positive) power level for a certain duration, and then fall again are referred to as **positive** pulses. The opposite - falling to and remaining at a minimum (negative) power level, then rising - is referred to as a **negative** pulse. The "ON" power level is

referred to as the **top** or **100% level**, whereas the "OFF" level is referred to as the **base** or **0% level**.

A **hysteresis** can refine the detection process and avoid falsely interpreting unstable signals as additional pulses. Optionally, detection can be restricted to a maximum number of pulses per capture process.

A top power level that is not constant is called an amplitude **droop**. Since the top level is an important reference for several pulse parameters, take a droop into consideration where possible. If a signal is known to have a droop, the reference level is not calculated as an average or median value over the ON time. Instead, it is calculated separately for the rising and falling edges.

The time it takes the signal power to rise from the base level to the top is called the **rise time**.

The duration the signal power remains at the top level is considered the **ON time**, which also defines the **pulse width**.

The time it takes the signal power to fall from the top to the base level is called the **fall time**.

The duration the signal power remains at the base level is called the **OFF time**.

The **pulse repetition interval** (also known as **pulse period**) is defined as the duration of one complete cycle consisting of:

- The rise time
- The ON time
- The fall time
- The OFF time

To avoid taking noise, ripples, or other signal instabilities into consideration, the absolute peak or minimum power values are not used to calculate these characteristic values. Instead, threshold values are defined.

See [Chapter 3.1, "Pulse parameters"](#), on page 15 for more precise definitions and an illustration of how these values are calculated.

Detection range

If the capture buffer contains a large number of pulses, it can be tedious to find a particular pulse for analysis. In this case, you can enable the use of a detection range instead of the entire capture buffer for analysis.

A detection range determines which part of the capture buffer is analyzed. It is defined by the [Detection Start](#) and the [Detection Length](#). If disabled (default), the entire capture buffer is used as the detection range.

The pulse numbers in the result displays are always relative to the current detection range, that is: pulse number 1 is the first pulse within the detection range. If you change the position of the detection range within the capture buffer, pulse number 1 can be a different pulse. All pulse-based results are automatically updated, if necessary. To navigate to a particular pulse in the capture buffer, use the pulse timestamps, which are relative to the start of the capture buffer.

An active detection range is indicated by vertical lines ("DR") in the "Magnitude Capture" Buffer display. You can also change the detection range graphically by dragging the vertical lines in the window.

4.3 Parameter spectrum calculation

When a signal is measured over time, it is possible to calculate the frequency spectrum for the measured signal by performing an FFT on the measured data. Similarly, it is possible to calculate a "spectrum" for a particular pulse parameter by performing an FFT. This "spectrum" allows you to determine the frequency of periodicities in the pulse parameters easily. For example, the "Parameter Spectrum" for "Pulse Top Power" can display a peak at a particular frequency, indicating incidental amplitude modulation of the amplifier output due to the power supply.

Basically, the "parameter spectrum" is calculated by taking the magnitude of the FFT of the selected parameter and normalizing the result to the largest peak.

Frequency axis

When calculating a spectrum from a measured signal, the sample rate ensures a regular distance between two frequencies. To calculate the frequency axis for a "parameter spectrum", the average PRI (pulse repetition interval) is taken to be the "sample rate" for the FFT.

Interpolation

However, in cases where the signal has a non-uniform or staggered PRI the frequency axis must be interpreted with caution. In cases where the pulses only occur in non-contiguous intervals, using the PRI no longer provides useful results. A good solution to create equidistant samples for calculation is to "fill up" the intervals between pulses with interpolated values. Based on the measured and interpolated values, the frequency axis can then be created.

The number of possible interpolation values is restricted to 100,000 by the R&S FSMR3000 Pulse application . Thus, the resulting spectrum is limited. By default, the

frequency span for the resulting spectrum is determined automatically. However, to improve the accuracy (and performance) of the interpolation, the maximum required frequency span can be restricted further manually.

Non-contiguous pulses - sections vs gaps

For the non-contiguous pulse measurements described above, interpolation in the long intervals where no pulses occur distort the result. Therefore, time intervals without pulses are identified, referred to as gaps. The time intervals that contain pulses are also identified, referred to as *sections*. Interpolation is then performed only on the sections, whereas the gaps are ignored for the spectrum calculation.

A *gap threshold* ensures that pulses with large intervals are not split into multiple sections. A *section threshold* ensures that singular pulses within a long gap are not included in calculation.

Example: Non-contiguous pulse measurement

A typical measurement setup that results in non-contiguous pulses is a rotating radar antenna scanning the air. For most of the time required for a single rotation, no pulses are received. However, when an object comes within the scan area, several pulses are detected within a short duration in time (identified as a section). When the object leaves the scan area again, the pulses will stop, defining a gap until the next object is detected.

Blocks

Spectrum calculation is then performed for the individual sections only. However, the Fourier transformation is not performed on the entire section in one step. Each section is split into blocks, which can overlap. An FFT is performed on each block to calculate an individual result. The smaller the block size, the more individual results are calculated, and the more precise the final result. Thus, the block size determines the resolution bandwidth in the final spectrum. Note that while the block size can be defined manually, the RBW cannot.

Window functions

Each block with its measured and interpolated values is multiplied with a specific window function. Windowing helps minimize the discontinuities at the end of the measured signal interval and thus reduces the effect of spectral leakage, increasing the frequency resolution.

Various different window functions are provided in the R&S FSMR3000 Pulse application. Each of the window functions has specific characteristics, including some advantages and some trade-offs. Consider these characteristics carefully to find the optimum solution for the measurement task.

Table 4-1: FFT window functions

Window type	Function
Rectangular	The rectangular window function is in effect not a function at all, it maintains the original sampled data. This can be useful to minimize the required bandwidth; however, heavy sidelobes can occur, which do not exist in the original signal.
Hamming	$w_{hamming}(n) = 0.54 - 0.46\left(\frac{2\pi n}{length - 1}\right)$
Hann	$w_{hann}(n) = 0.5 - 0.5\left(\frac{2\pi n}{length - 1}\right)$
Blackman (default)	$w_{blackman}(n) = \frac{\alpha + 1}{2} - 0.5 \cos\left(\frac{2\pi n}{length - 1}\right) - \frac{\alpha}{2} \cos\left(\frac{4\pi n}{length - 1}\right)$ $\alpha = \frac{0.5}{1 + \cos\frac{2\pi}{length - 1}}$
Bartlett	$w_{bartlett}(n) = 0.54 - 0.46\left(\frac{2\pi n}{length - 1}\right)$

Averaging and final spectrum

After windowing, an FFT is performed on each block, and the individual spectrum results are then combined to a total result by averaging the traces. The complete process to calculate a "parameter spectrum" is shown in [Figure 4-4](#).

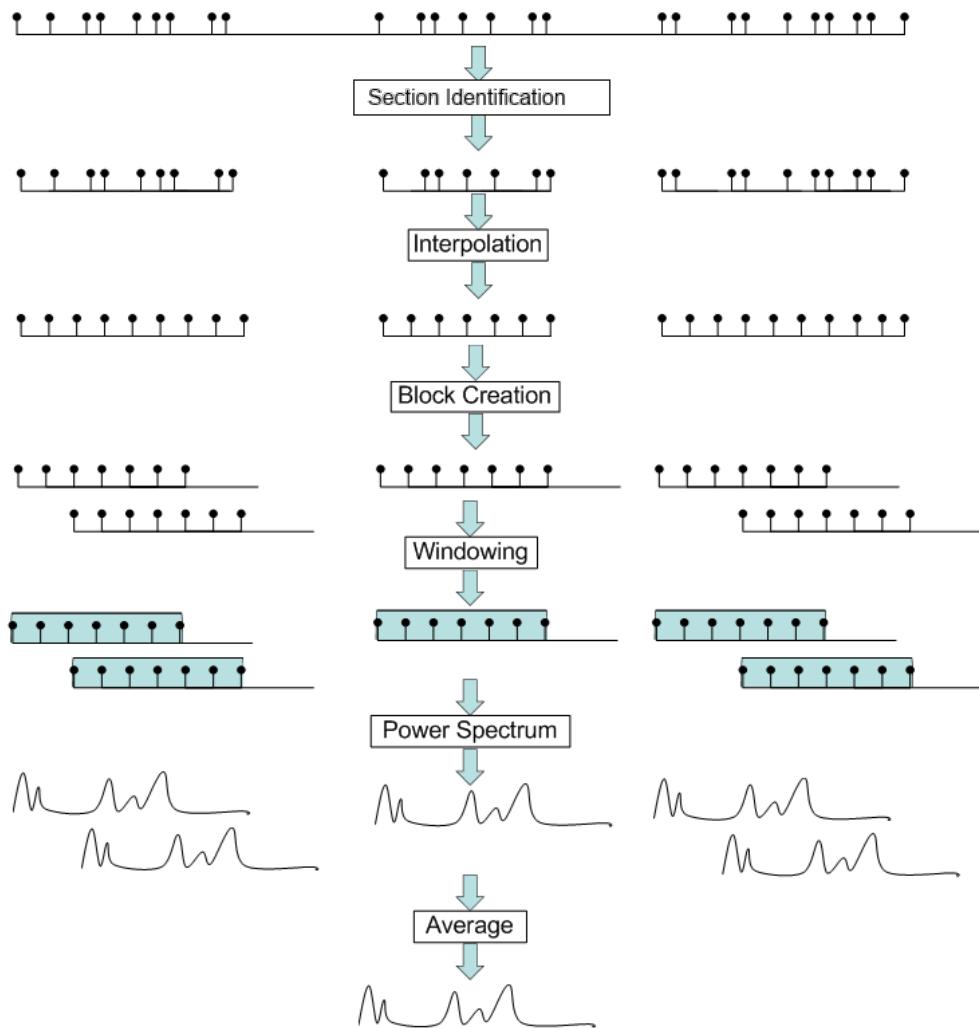

Figure 4-4: Calculating a parameter spectrum for non-contiguous pulses

4.4 Basics on input from I/Q data files

The I/Q data to be evaluated in a particular R&S FMSR3 application cannot only be captured by the application itself, it can also be loaded from a file, provided it has the correct format. The file is then used as the input source for the application.

For example, you can capture I/Q data using the I/Q Analyzer application, store it to a file, and then analyze the signal parameters for that data later using the Pulse application (if available).

An application note on converting Rohde & Schwarz I/Q data files is available from the Rohde & Schwarz website:

[1EF85: Converting R&S I/Q data files](#)

When importing data from an I/Q data file using the import functions provided by some R&S FSMR3 applications, the data is only stored temporarily in the capture buffer. It overwrites the current measurement data and is in turn overwritten by a new measurement. If you use an I/Q data file as input, the stored I/Q data remains available for any number of subsequent measurements. Furthermore, the (temporary) data import requires the current measurement settings in the current application to match the settings that were applied when the measurement results were stored (possibly in a different application). When the data is used as an input source, however, the data acquisition settings in the current application (attenuation, center frequency, measurement bandwidth, sample rate) can be ignored. As a result, these settings cannot be changed in the current application. Only the measurement time can be decreased, to perform measurements on an extract of the available data (from the beginning of the file) only.

When using input from an I/Q data file, the [RUN SINGLE] function starts a single measurement (i.e. analysis) of the stored I/Q data, while the [RUN CONT] function repeatedly analyzes the same data from the file.

Sample iq.tar files

If you have the optional R&S FSMR3 VSA application (R&S FSMR3-K70), some sample iq.tar files are provided in the C:/R_S/Instr/user/vsa/DemoSignals directory on the R&S FSMR3.

Pre-trigger and post-trigger samples

In applications that use pre-triggers or post-triggers, if no pre-trigger or post-trigger samples are specified in the I/Q data file, or too few trigger samples are provided to satisfy the requirements of the application, the missing pre- or post-trigger values are filled up with zeros. Superfluous samples in the file are dropped, if necessary. For pre-trigger samples, values are filled up or omitted at the beginning of the capture buffer. For post-trigger samples, values are filled up or omitted at the end of the capture buffer.

4.5 Trace evaluation

Traces in graphical result displays based on the defined result range (see [Chapter 6.1.2, "Result range", on page 88](#)) can be configured. For example, you can perform statistical evaluations over a defined number of measurements, pulses, or samples.

You can configure up to 6 individual traces for the following result displays (see [Chapter 6.1.2, "Result range", on page 88](#)):

- ["Pulse Frequency"](#) on page 34
- ["Pulse Magnitude"](#) on page 35
- ["Pulse Phase"](#) on page 36
- ["Pulse Phase \(Wrapped\)"](#) on page 36
- [Trace statistics](#)..... 51
- [Normalizing traces](#)..... 51

4.5.1 Trace statistics

Each trace represents an analysis of the data measured in one result range. Statistical evaluations can be performed over several traces, that is, result ranges. Which ranges and how many are evaluated depends on the configuration settings.

Selected pulse vs all pulses

The "Sweep/Average Count" determines how many measurements are evaluated.

For each measurement, in turn, either the selected pulse only (that is: one result range), or all detected pulses (that is: possibly several result ranges) can be included in the statistical evaluation.

Thus, the overall number of averaging steps depends on the "Sweep/Average Count" and the [statistical evaluation mode](#).

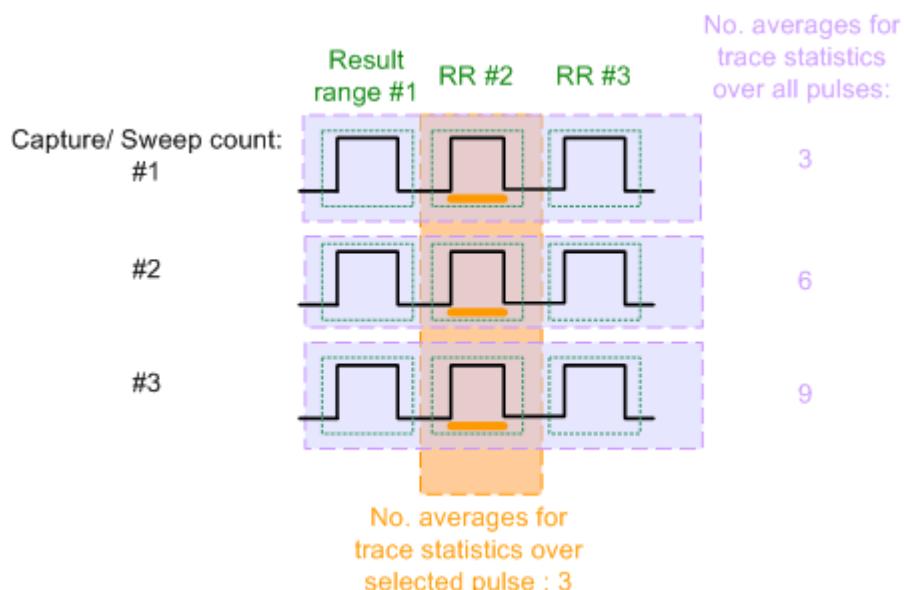

Figure 4-5: Trace statistics - number of averaging steps

4.5.2 Normalizing traces

For pulse results based on an individual pulse, sometimes, the absolute value is not of interest. Instead, the relative offset of each point in the trace from a specific measurement point within the pulse, or from a reference pulse, is of interest.

Normalization based on a measurement point

In a standard trace for a pulse result display, the measured frequency, magnitude, or phase value for each measurement point in the result range is displayed. If only the relative deviations within that pulse are of interest, you can subtract a fixed value from each trace point. The fixed value is the value measured at a specified point in the pulse. Thus, the trace value at the specified measurement point is always 0. This happens when a trace is normalized based on the measured pulse.

The measurement point used for normalization is the same point used to determine the pulse parameter results, see [Chapter 5.9.2, "Measurement point", on page 82](#).

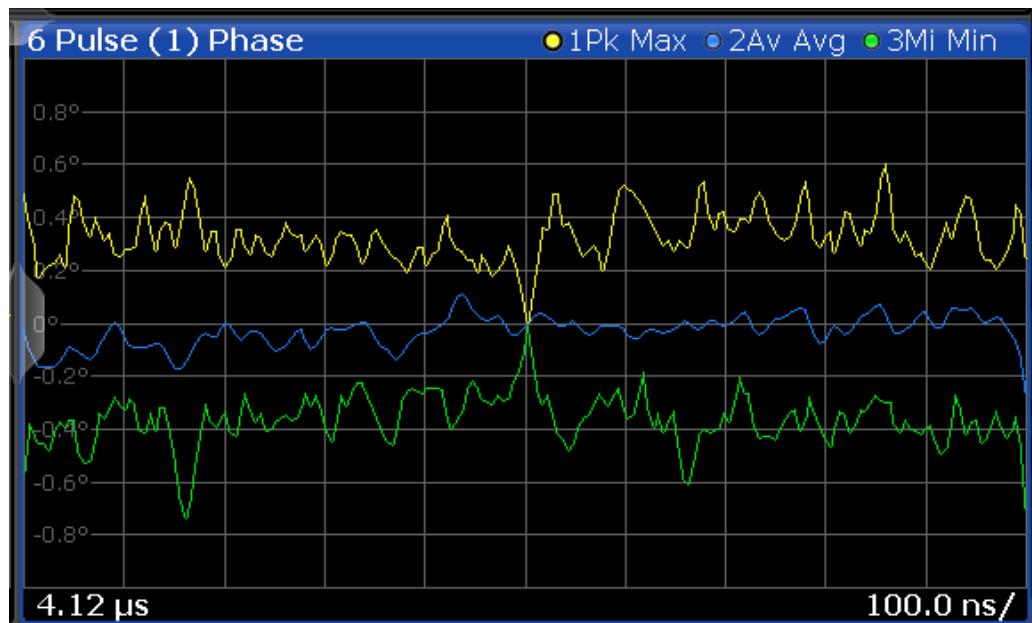

Figure 4-6: Normalization of the Pulse Phase trace based on the measured pulse

By default, the measurement point is the center of the pulse. However, this position can be moved arbitrarily within the pulse by defining an offset.

If the measurement point is defined with an offset in time, the trace value does not pass 0 at the measurement point. It passes 0 at the time of the measurement point + the offset value.

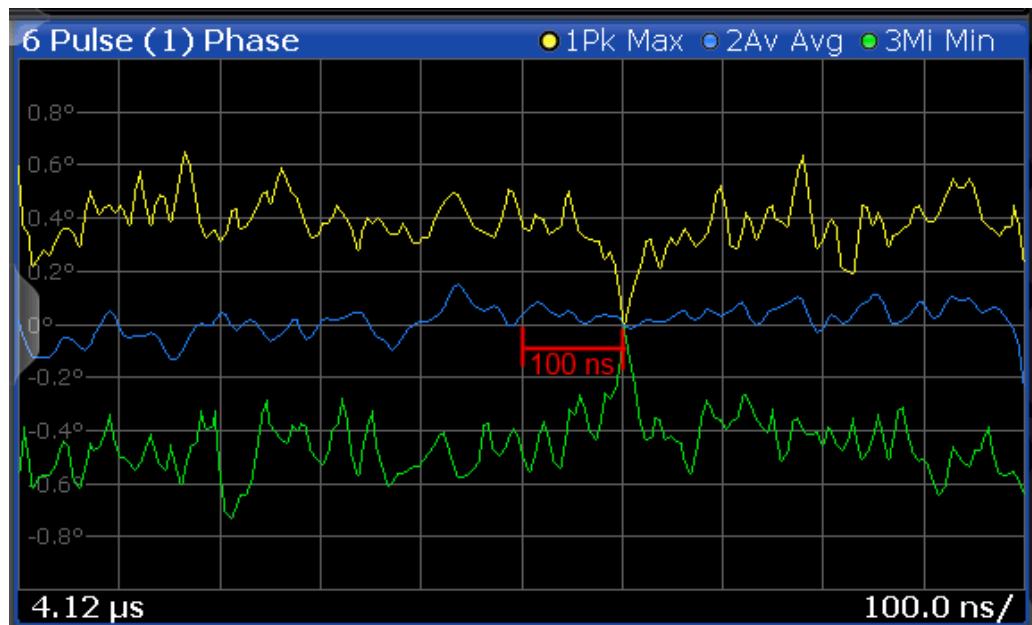

Figure 4-7: Normalization of the Pulse Phase trace based on the measured pulse + 100 ns offset

Normalization + averaging window

Together with an [Averaging Window](#) for the measurement point, normalization based on the measured pulse can provide for a very stable pulse trace. However, the calculated average value does not always coincide with the measured trace point value. So in this case, the maxhold, minhold or average traces do not necessarily pass 0 at the measurement point.

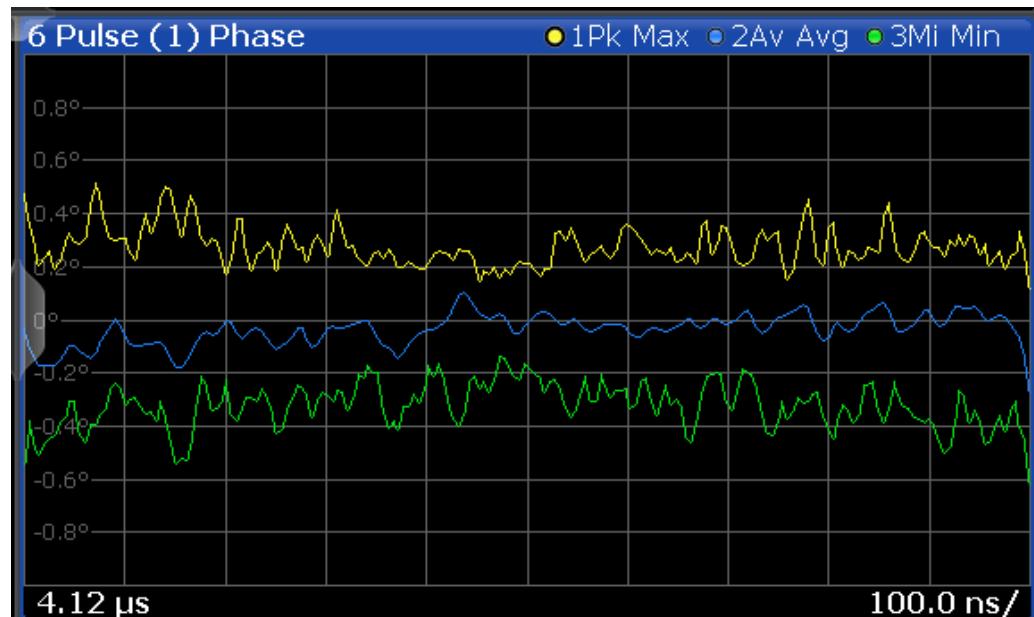

Figure 4-8: Normalization based on the measured pulse with an average window

Normalization based on a reference pulse

Sometimes you are not interested in the deviations of the pulse results within a single pulse, but rather in the deviations to a reference pulse. Then you can also base normalization on the measurement point of a specified reference pulse. In this case, the trace value for the measurement point in the reference pulse is deducted from all trace values in the measured pulse.

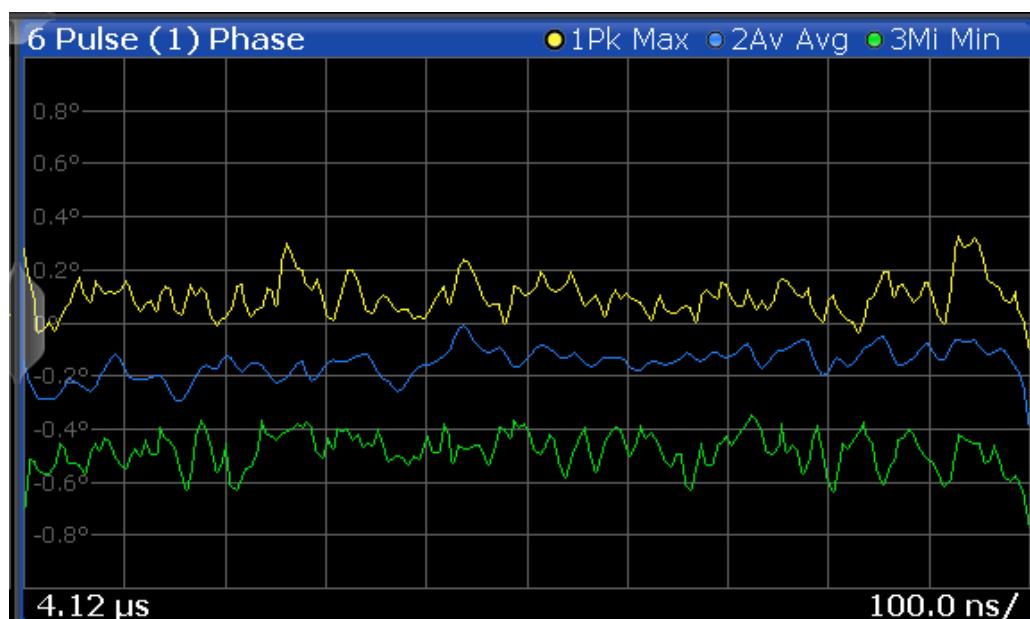

Figure 4-9: Normalization based on a reference pulse

Note that in this case, the value at the measurement point used to determine pulse parameter results is also normalized. Thus, normalization based on a reference pulse modifies the results in the [Pulse Results](#) and ["Pulse Statistics"](#) on page 39 tables! The pulse parameter values in the pulse tables for the (normalized) reference pulse are always 0.

However, as opposed to normalization based on a measured pulse, the pulse-to-pulse deviations are maintained when normalized to a reference pulse.

The reference pulse can be defined as one of the following:

- A fixed pulse number
- The currently selected pulse
- A previous (-n) or subsequent (+n) pulse, relative to the currently evaluated pulse

Normalization of pulse phase traces

Phase traces for an individual pulse can be normalized just like magnitude and frequency traces, as described above. However, you can also define a phase offset. In this case, the pulses are not normalized to 0, but to the phase offset value. The phase measured at a specified point in the reference or measured pulse, *plus the phase offset*, is subtracted from each trace point.

The phase offset for normalization is defined in the "Units" settings (see ["Phase Normalization"](#) on page 102).

5 Configuration

Access: [MODE] > "Pulse"

Pulse measurements require a special application on the R&S FSMR3.

When you activate the Pulse application the first time, a set of parameters is passed on from the currently active application. After initial setup, the parameters for the measurement channel are stored upon exiting and restored upon re-entering the channel. Thus, you can switch between applications quickly and easily.

When you activate the Pulse application, a pulse measurement for the input signal is started automatically with the default configuration. The "Pulse" menu is displayed and provides access to the most important configuration functions.

Automatic refresh of results after configuration changes

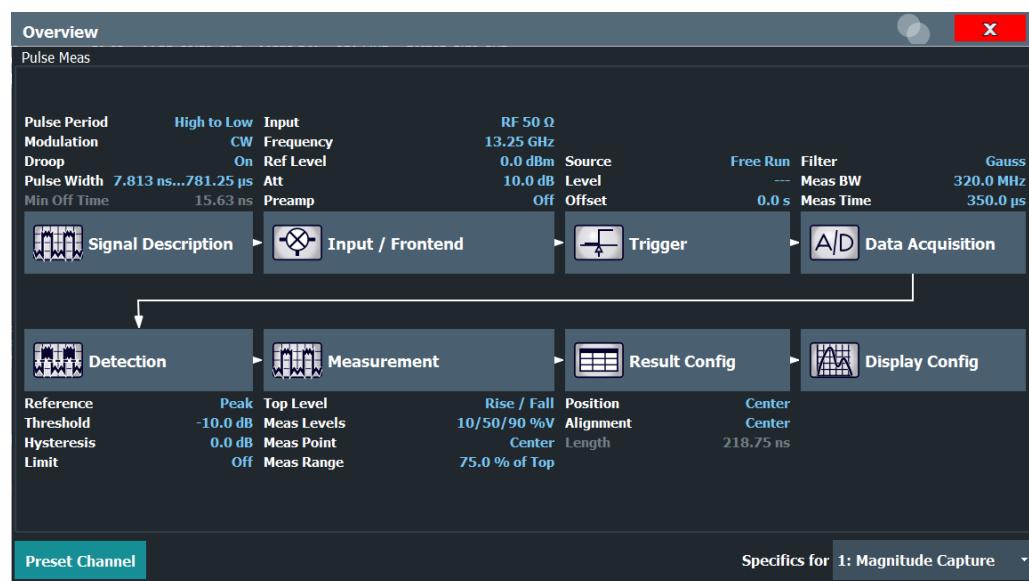

The R&S FSMR3 supports you in finding the correct measurement settings quickly and easily - after each change in settings, the measurements are repeated and the result displays are updated immediately and automatically to reflect the changes. You do not need to refresh the display manually. Thus, you can see if the setting is appropriate or not directly through the transparent dialog boxes.

● Configuration overview.....	55
● Signal description.....	57
● Input and output settings.....	60
● Frontend settings.....	63
● Trigger settings.....	67
● Data acquisition.....	72
● Sweep settings.....	75
● Pulse detection.....	76
● Pulse measurement settings.....	79
● Automatic settings.....	85

5.1 Configuration overview

Throughout the measurement configuration, an overview of the most important currently defined settings is provided in the "Overview".

In addition to the main measurement settings, the "Overview" provides quick access to the main settings dialog boxes. Thus, you can easily configure an entire measurement channel from input over processing to output and evaluation by stepping through the dialog boxes as indicated in the "Overview".

In particular, the "Overview" provides quick access to the following configuration dialog boxes (listed in the recommended order of processing):

1. Signal Description
See [Chapter 5.2, "Signal description", on page 57](#)
2. Input and Frontend Settings
3. (Optionally:) Trigger/Gate
See [Chapter 5.5, "Trigger settings", on page 67](#)
4. Data Acquisition
See [Chapter 5.6, "Data acquisition", on page 72](#)
5. Pulse Detection
See [Chapter 5.8, "Pulse detection", on page 76](#)
6. Pulse Measurement
See [Chapter 5.9, "Pulse measurement settings", on page 79](#)
7. Result Configuration
See [Chapter 6.1, "Result configuration", on page 87](#)

To configure settings

- Select any button in the "Overview" to open the corresponding dialog box.

Select a setting in the channel bar (at the top of the measurement channel tab) to change a specific setting.

Preset Channel.....	57
Specific Settings for.....	57

Preset Channel

Select the "Preset Channel" button in the lower left-hand corner of the "Overview" to restore all measurement settings *in the current channel* to their default values.

Note: Do not confuse the "Preset Channel" button with the [Preset] key, which restores the entire instrument to its default values and thus closes *all channels* on the R&S FSMR3 (except for the default channel)!

Remote command:

[SYSTem:PRESet:CHANnel\[:EXEC\]](#) on page 134

Specific Settings for

The channel can contain several windows for different results. Thus, the settings indicated in the "Overview" and configured in the dialog boxes vary depending on the selected window.

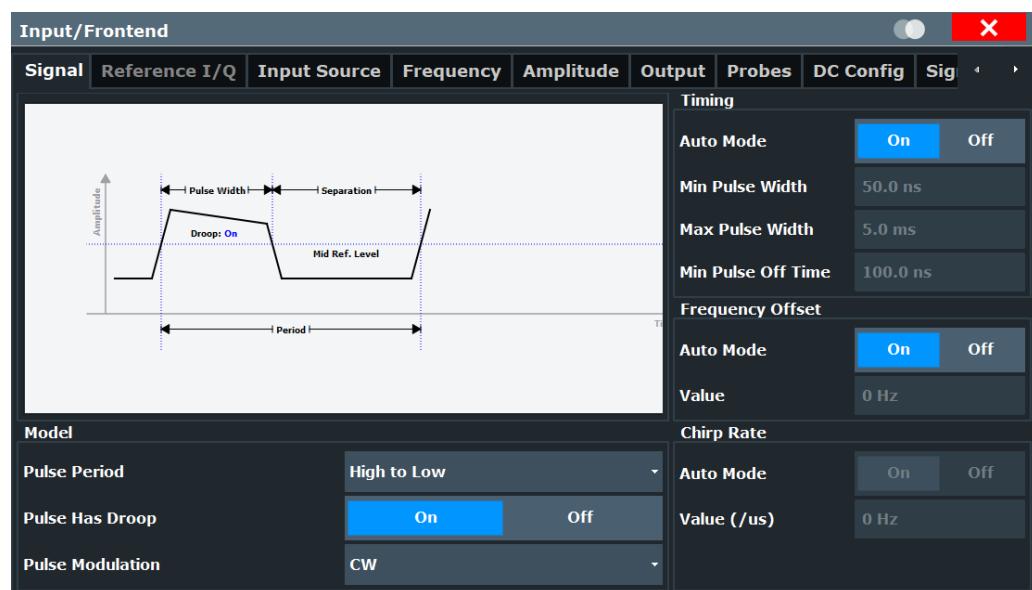

Select an active window from the "Specific Settings for" selection list that is displayed in the "Overview" and in all window-specific configuration dialog boxes.

The "Overview" and dialog boxes are updated to indicate the settings for the selected window.

5.2 Signal description

Access: "Overview" > "Signal Description"

The signal description provides information on the expected input signal, which optimizes pulse detection and measurement.

Pulse Period	58
Pulse Has Droop	58
Pulse Modulation	58
Timing Auto Mode	59
Minimum Pulse Width	59
Maximum Pulse Width	59
Min Pulse Off Time	59
Frequency Offset Auto Mode	59
Frequency Offset Value	59
Chirp Rate Auto Mode	60
Chirp Rate	60

Pulse Period

Defines how a pulse is detected.

"High to Low" The pulse period begins with the falling edge of the preceding pulse and ends with the falling edge of the current pulse.

"Low to High" The pulse period begins with the rising edge of the current pulse and end with the rising edge of the succeeding pulse.

Remote command:

[SENSe:] TRACe:MEASurement:DEFIne:PULSe:PERiod on page 137

Pulse Has Droop

If enabled, a pulse can be modeled as having amplitude droop, i.e. the pulse top may not be flat.

Remote command:

[SENSe:] TRACe:MEASurement:DEFIne:PULSe:ADRoop on page 136

Pulse Modulation

Defines the expected pulse modulation:

"Arbitrary"	Modulation not considered (no phase error/frequency error results available)
"CW"	Continuous wave modulation, i.e. only the carrier power is modulated (On/Off) For CW modulation, additional parameters are available to define the frequency offset.
"Linear FM"	Linear frequency modulation (FM) (The frequency changes linearly over time within each pulse) For linear pulse modulation, additional parameters are available to define the chirp rate.

Remote command:

[SENSe:] TRACe:MEASurement:DEFIne:PULSe:MODulation on page 136

Timing Auto Mode

If enabled, the timing parameters (minimum pulse width, maximum pulse width, minimum pulse off time) are determined automatically from the current capture settings.

Remote command:

[SENSe:] TRACe:MEASurement:DEFIne:DURation:AUTO on page 134

Minimum Pulse Width

Defines a minimum pulse width; pulses outside this range are not detected. The available value range is restricted by the sample rate.

Remote command:

[SENSe:] TRACe:MEASurement:DEFIne:DURation:MIN on page 135

Maximum Pulse Width

Defines a maximum pulse width; pulses outside this range are not detected. The available value range is restricted by the sample rate.

Remote command:

[SENSe:] TRACe:MEASurement:DEFIne:DURation:MAX on page 135

Min Pulse Off Time

The minimum time the pulse is "off", i.e. the time between successive pulses. This value is used to determine noise statistics and to reject short drops in amplitude during pulse "on" time. The available value range is 50ns to 100s, but may be restricted further by the sample rate.

Remote command:

[SENSe:] TRACe:MEASurement:DEFIne:DURation:OFF on page 135

Frequency Offset Auto Mode

If enabled, the frequency offset is estimated automatically for each individual pulse.

Remote command:

[SENSe:] TRACe:MEASurement:DEFIne:FREQuency:OFFSet:AUTO on page 136

Frequency Offset Value

Defines a known frequency offset to be corrected in the pulse acquisition data.

Remote command:

[SENSe:] TRACe:MEASurement:DEFIne:FREQuency:OFFSet on page 135

Chirp Rate Auto Mode

If enabled, the chirp rate is estimated automatically for each individual pulse.

Remote command:

[SENSe:] TRACe:MEASurement:DEFIne:FREQuency:RATE:AUTO on page 136

Chirp Rate

Defines a known frequency chirp rate (in Hz/μs) to be used to generate an ideal pulse waveform for computing frequency and phase error parameters. This value is assumed constant for all measured pulses.

Remote command:

[SENSe:] TRACe:MEASurement:DEFIne:FREQuency:RATE on page 136

5.3 Input and output settings

Access: "Overview" > "Input/Frontend"

Or: "Input & Output"

The R&S FSMR3 can analyze signals from different input sources and provide various types of output (such as noise or trigger signals).

- [Input source settings](#).....60

5.3.1 Input source settings

Access: "Overview" > "Input/Frontend" > "Input Source"

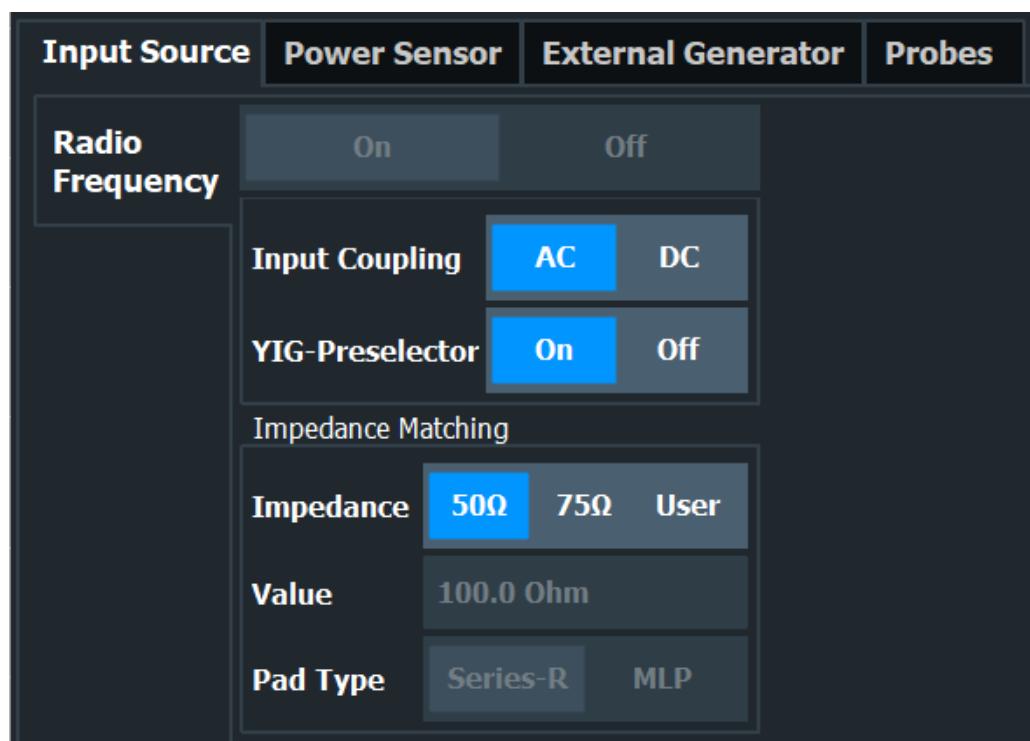

The input source determines which data the R&S FSMR3 analyzes.

The default input source for the R&S FSMR3 is "Radio Frequency", i.e. the signal at the "RF Input" connector of the R&S FSMR3. If no additional options are installed, this is the only available input source.

- [Radio frequency input](#).....60

5.3.1.1 Radio frequency input

Access: "Overview" > "Input/Frontend" > "Input Source" > "Radio Frequency"

RF Input Protection

The RF input connector of the R&S FSMR3 must be protected against signal levels that exceed the ranges specified in the data sheet. Therefore, the R&S FSMR3 is equipped with an overload protection mechanism for DC and signal frequencies up to 30 MHz. This mechanism becomes active as soon as the power at the input mixer exceeds the specified limit. It ensures that the connection between RF input and input mixer is cut off.

When the overload protection is activated, an error message is displayed in the status bar ("INPUT OVLD"), and a message box informs you that the RF input was disconnected. Furthermore, a status bit (bit 3) in the STAT:QUES:POW status register is set. In this case, you must decrease the level at the RF input connector and then close the message box. Then measurement is possible again. Reactivating the RF input is also possible via the remote command `INPut<ip>:ATTenuation:PROtection:RESET`.

Radio Frequency State.....	61
Input Coupling.....	62
Impedance.....	62
High Pass Filter 1 to 3 GHz.....	62
YIG-Preselector.....	62

Radio Frequency State

Activates input from the "RF Input" connector.

Remote command:

`INPut<ip>:SELect` on page 140

Input Coupling

The RF input of the R&S FSMR3 can be coupled by alternating current (AC) or direct current (DC).

AC coupling blocks any DC voltage from the input signal. AC coupling is activated by default to prevent damage to the instrument. Very low frequencies in the input signal can be distorted.

However, some specifications require DC coupling. In this case, you must protect the instrument from damaging DC input voltages manually. For details, refer to the data sheet.

Remote command:

[INPut<ip>:COUpling](#) on page 138

Impedance

For some measurements, the reference impedance for the measured levels of the R&S FSMR3000 can be set to 50 Ω or 75 Ω.

Select 75 Ω if the 50 Ω input impedance is transformed to a higher impedance using a 75 Ω adapter of the RAZ type. (That corresponds to 25Ω in series to the input impedance of the instrument.) The correction value in this case is 1.76 dB = 10 log (75Ω/50Ω).

Remote command:

[INPut<ip>:IMPedance](#) on page 140

High Pass Filter 1 to 3 GHz

Activates an additional internal highpass filter for RF input signals from 1 GHz to 3 GHz. This filter is used to remove the harmonics of the analyzer to measure the harmonics for a DUT, for example.

This function requires an additional hardware option.

Note: For RF input signals outside the specified range, the high-pass filter has no effect. For signals with a frequency of approximately 4 GHz upwards, the harmonics are suppressed sufficiently by the YIG-preselector, if available.)

Remote command:

[INPut<ip>:FILTer:HPASs\[:STATe\]](#) on page 139

YIG-Preselector

Enables or disables the YIG-preselector.

This setting requires an additional option on the R&S FSMR3000.

An internal YIG-preselector at the input of the R&S FSMR3000 ensures that image frequencies are rejected. However, image rejection is only possible for a restricted bandwidth. To use the maximum bandwidth for signal analysis you can disable the YIG-preselector at the input of the R&S FSMR3000, which can lead to image-frequency display.

Note: Note that the YIG-preselector is active only on frequencies greater than 8 GHz. Therefore, switching the YIG-preselector on or off has no effect if the frequency is below that value.

Remote command:

[INPut<ip>:FILTer:YIG\[:STATe\]](#) on page 140

5.4 Frontend settings

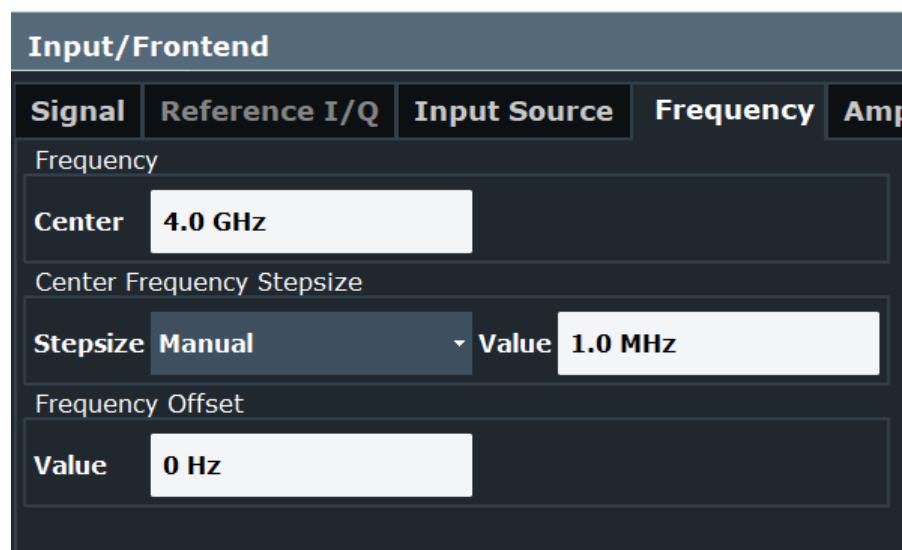

Access: "Overview" > "Input/Frontend"

The frequency and amplitude settings represent the "frontend" of the measurement setup.

- [Frequency settings](#).....63
- [Amplitude settings](#).....64

5.4.1 Frequency settings

Access: "Overview" > "Input/Frontend" > "Frequency"

- | | |
|---|----|
| Center Frequency | 63 |
| Center Frequency Stepsize | 63 |
| Frequency Offset | 64 |

Center Frequency

Defines the center frequency of the signal in Hertz.

The allowed range of values for the center frequency depends on the frequency span.

span > 0: $\text{span}_{\min}/2 \leq f_{\text{center}} \leq f_{\max} - \text{span}_{\min}/2$

zero span: $0 \text{ Hz} \leq f_{\text{center}} \leq f_{\max}$

f_{\max} and span_{\min} depend on the instrument and are specified in the data sheet.

Remote command:

[SENSe:] FREQuency:CENTER on page 142

Center Frequency Stepsize

Defines the step size by which the center frequency is increased or decreased using the arrow keys.

When you use the rotary knob the center frequency changes in steps of only 1/10 of the span.

The step size can be coupled to another value or it can be manually set to a fixed value.

"= Center" Sets the step size to the value of the center frequency. The used value is indicated in the "Value" field.

"Manual" Defines a fixed step size for the center frequency. Enter the step size in the "Value" field.

Remote command:

[SENSe:] FREQuency:CENTER:STEP on page 142

Frequency Offset

Shifts the displayed frequency range along the x-axis by the defined offset.

This parameter has no effect on the instrument's hardware, on the captured data, or on data processing. It is simply a manipulation of the final results in which absolute frequency values are displayed. Thus, the x-axis of a spectrum display is shifted by a constant offset if it shows absolute frequencies. However, if it shows frequencies relative to the signal's center frequency, it is not shifted.

A frequency offset can be used to correct the display of a signal that is slightly distorted by the measurement setup, for example.

The allowed values range from -1 THz to 1 THz. The default setting is 0 Hz.

Remote command:

[SENSe:] FREQuency:OFFSet on page 143

5.4.2 Amplitude settings

Access: "Overview" > "Input/Frontend" > "Amplitude"

Amplitude settings affect the y-axis values.

Input/Frontend						
Signal	Reference I/Q	Input Source	Frequency	Amplitude	Output	
Reference Level						Input Settings
Value	0.0 dBm		Preamplifier	On	Off	
Offset	0.0 dB		Input Coupling	AC	DC	
	Auto Level		Impedance	50Ω	75Ω	
Attenuation						Electronic Attenuation
Mode	Auto	Manual	State	On	Off	
Value	10.0 dB		Mode	Auto	Manual	
Optimization	Low Noise		Value	0 dB		

Reference Level.....	65
└ Shifting the Display (Offset).....	65
RF Attenuation.....	66
└ Attenuation Mode / Value.....	66
Input Settings.....	66
└ Preamplifier.....	66
└ Input Coupling.....	66
└ Impedance.....	67

Reference Level

Defines the expected maximum reference level. Signal levels above this value are possibly not measured correctly. Signals above the reference level are indicated by an "IF Overload" status display.

The reference level can also be used to scale power diagrams; the reference level is then used for the calculation of the maximum on the y-axis.

Since the hardware of the R&S FSMR3000 is adapted according to this value, it is recommended that you set the reference level close above the expected maximum signal level. Thus you ensure an optimal measurement (no compression, good signal-to-noise ratio).

Remote command:

`DISPlay[:WINDOW<n>] [:SUBWindow<w>]:TRACe<t>:Y[:SCALE]:RLEVel`
on page 144

Shifting the Display (Offset) ← Reference Level

Defines an arithmetic level offset. This offset is added to the measured level. In some result displays, the scaling of the y-axis is changed accordingly.

Define an offset if the signal is attenuated or amplified before it is fed into the R&S FSMR3 so the application shows correct power results. All displayed power level results are shifted by this value.

The setting range is ± 200 dB in 0.01 dB steps.

Note, however, that the *internal* reference level (used to adjust the hardware settings to the expected signal) ignores any "Reference Level Offset". Thus, it is important to keep in mind the actual power level the R&S FSMR3 must handle. Do not rely on the displayed reference level (internal reference level = displayed reference level - offset).

Remote command:

```
DISPlay[:WINDOW<n>][:SUBWindow<w>]:TRACe<t>:Y[:SCALe]:RLEVel:  
OFFSet on page 144
```

RF Attenuation

Defines the mechanical attenuation for RF input.

Attenuation Mode / Value \leftarrow RF Attenuation

Defines the attenuation applied to the RF input of the R&S FSMR3.

The RF attenuation can be set automatically as a function of the selected reference level (Auto mode). Automatic attenuation ensures that no overload occurs at the RF Input connector for the current reference level. It is the default setting.

In "Manual" mode, you can set the RF attenuation in 1 dB steps (down to 0 dB). Other entries are rounded to the next integer value. The range is specified in the data sheet. If the defined reference level cannot be set for the defined RF attenuation, the reference level is adjusted accordingly and the warning "limit reached" is displayed.

NOTICE! Risk of hardware damage due to high power levels. When decreasing the attenuation manually, ensure that the power level does not exceed the maximum level allowed at the RF input, as an overload can lead to hardware damage.

Remote command:

```
INPut<ip>:ATTenuation on page 146  
INPut<ip>:ATTenuation:AUTO on page 146
```

Input Settings

Some input settings affect the measured amplitude of the signal, as well.

Preamplifier \leftarrow Input Settings

If the (optional) internal preamplifier hardware is installed on the R&S FSMR3000, a preamplifier can be activated for the RF input signal.

You can use a preamplifier to analyze signals from DUTs with low output power.

- | | |
|---------|--|
| "Off" | Deactivates the preamplifier. |
| "15 dB" | The RF input signal is amplified by about 15 dB. |
| "30 dB" | The RF input signal is amplified by about 30 dB. |

For FSMR3050, the input signal is amplified by 30 dB if the preamplifier is activated.

Remote command:

```
INPut<ip>:GAIN:STATE on page 144  
INPut<ip>:GAIN[:VALue] on page 145
```

Input Coupling \leftarrow Input Settings

The RF input of the R&S FSMR3 can be coupled by alternating current (AC) or direct current (DC).

AC coupling blocks any DC voltage from the input signal. AC coupling is activated by default to prevent damage to the instrument. Very low frequencies in the input signal can be distorted.

However, some specifications require DC coupling. In this case, you must protect the instrument from damaging DC input voltages manually. For details, refer to the data sheet.

Remote command:

[INPut<ip>:COUPLing](#) on page 138

Impedance ← Input Settings

For some measurements, the reference impedance for the measured levels of the R&S FSMR3000 can be set to 50 Ω or 75 Ω.

Select 75 Ω if the 50 Ω input impedance is transformed to a higher impedance using a 75 Ω adapter of the RAZ type. (That corresponds to 25Ω in series to the input impedance of the instrument.) The correction value in this case is 1.76 dB = 10 log (75Ω/50Ω).

Remote command:

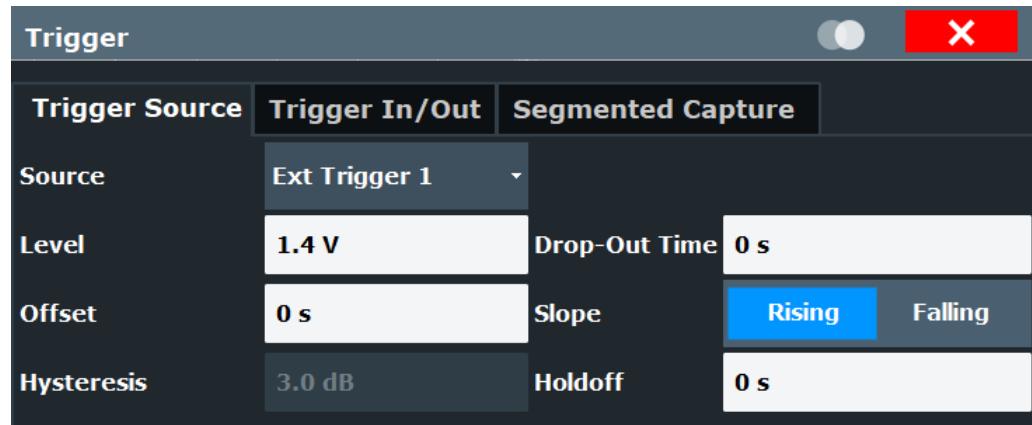

[INPut<ip>:IMPedance](#) on page 140

5.5 Trigger settings

Access: "Overview" > "Trigger" > "Trigger Source"

Or: [TRIG] > "Trigger Config"

Trigger settings determine when the input signal is measured.

External triggers from one of the [TRIGGER INPUT/OUTPUT] connectors on the R&S FSMR3000 are also available.

For step-by-step instructions on configuring triggered measurements, see the R&S FSMR3 User Manual.

Trigger Source	68
└ Free Run	68
└ Ext. Trigger 1/2	68
└ I/Q Power	69
└ IF Power	69
└ RF Power	69
Trigger Level	70
Drop-Out Time	70
Trigger Offset	70
Slope	70
Hysteresis	70
Trigger Holdoff	71
Trigger 1/2	71
└ Output Type	71
└ Level	72
└ Pulse Length	72
└ Send Trigger	72

Trigger Source

Defines the trigger source. If a trigger source other than "Free Run" is set, "TRG" is displayed in the channel bar and the trigger source is indicated.

Note: When triggering is activated, the squelch function is automatically disabled.

Remote command:

`TRIGger[:SEQUence]:SOURce` on page 150

Free Run ← Trigger Source

No trigger source is considered. Data acquisition is started manually or automatically and continues until stopped explicitly.

Remote command:

`TRIG:SOUR IMM`, see `TRIGger[:SEQUence]:SOURce` on page 150

Ext. Trigger 1/2 ← Trigger Source

Data acquisition starts when the TTL signal fed into the specified input connector meets or exceeds the specified trigger level.

(See "[Trigger Level](#)" on page 70).

Note: The "External Trigger 1" softkey automatically selects the trigger signal from the "Trigger Input / Output" connector on the front panel.

For details, see the "Instrument Tour" chapter in the R&S FSMR3 Getting Started manual.

"External Trigger 1"

Trigger signal from the "Trigger Input / Output" connector.
(front panel)

"External Trigger 2"

Trigger signal from the "Sync Trigger Input / Output" connector.
(rear panel)

Note: Connector must be configured for "Input" in the "Output" configuration
(See the R&S FSMR3 user manual).

Remote command:

TRIG:SOUR EXT, TRIG:SOUR EXT2

See [TRIGger \[:SEQUence\] :SOURce](#) on page 150

I/Q Power ← Trigger Source

Triggers the measurement when the magnitude of the sampled I/Q data exceeds the trigger threshold.

Remote command:

TRIG:SOUR IQP, see [TRIGger \[:SEQUence\] :SOURce](#) on page 150

IF Power ← Trigger Source

The R&S FSMR3 starts capturing data as soon as the trigger level is exceeded around the third intermediate frequency.

For frequency sweeps, the third IF represents the start frequency. The trigger threshold depends on the defined trigger level, as well as on the RF attenuation and preamplification. A reference level offset, if defined, is also considered. The trigger bandwidth at the intermediate frequency depends on the RBW and sweep type. For details on available trigger levels and trigger bandwidths, see the instrument data sheet.

For measurements on a fixed frequency (e.g. zero span or I/Q measurements), the third IF represents the center frequency.

This trigger source is only available for RF input.

The available trigger levels depend on the RF attenuation and preamplification. A reference level offset, if defined, is also considered.

For details on available trigger levels and trigger bandwidths, see the data sheet.

Note: Be aware that in auto sweep type mode, due to a possible change in sweep types, the trigger bandwidth can vary considerably for the same RBW setting.

Remote command:

TRIG:SOUR IFP, see [TRIGger \[:SEQUence\] :SOURce](#) on page 150

RF Power ← Trigger Source

Defines triggering of the measurement via signals which are outside the displayed measurement range.

For this purpose, the instrument uses a level detector at the first intermediate frequency.

The input signal must be in the frequency range between 500 MHz and 8 GHz.

The resulting trigger level at the RF input depends on the RF attenuation and preamplification. For details on available trigger levels, see the instrument's data sheet.

Note: If the input signal contains frequencies outside of this range (e.g. for fullspan measurements), the measurement can be aborted. A message indicating the allowed input frequencies is displayed in the status bar.

A "Trigger Offset", "Trigger Polarity" and "Trigger Holdoff" (to improve the trigger stability) can be defined for the RF trigger, but no "Hysteresis".

Remote command:

`TRIG:SOUR RFP`, see [TRIGger \[:SEQUence\] :SOURce](#) on page 150

Trigger Level

Defines the trigger level for the specified trigger source.

For details on supported trigger levels, see the instrument data sheet.

Remote command:

[TRIGger \[:SEQUence\] :LEVEL:IFPower](#) on page 149

[TRIGger \[:SEQUence\] :LEVEL:IQPower](#) on page 149

[TRIGger \[:SEQUence\] :LEVEL\[:EXTERNAL<port>\]](#) on page 148

[TRIGger \[:SEQUence\] :LEVEL:RFPower](#) on page 149

Drop-Out Time

Defines the time that the input signal must stay below the trigger level before triggering again.

Remote command:

[TRIGger \[:SEQUence\] :DTIMe](#) on page 147

Trigger Offset

Defines the time offset between the trigger event and the start of the measurement.

Offset > 0:	Start of the measurement is delayed
Offset < 0:	Measurement starts earlier (pretrigger) Only possible for zero span (e.g. I/Q Analyzer application) and gated trigger switched off Maximum allowed range limited by the measurement time: $\text{Pretrigger}_{\max} = \text{measurement time}_{\max}$

Tip: To determine the trigger point in the sample (for "External" or "IF Power" trigger source), use the `TRACe:IQ:TPIsample?` command.

Remote command:

[TRIGger \[:SEQUence\] :HOLDoff \[:TIME\]](#) on page 147

Slope

For all trigger sources except time, you can define whether triggering occurs when the signal rises to the trigger level or falls down to it.

Remote command:

[TRIGger \[:SEQUence\] :SLOPe](#) on page 150

Hysteresis

Defines the distance in dB to the trigger level that the trigger source must exceed before a trigger event occurs. Setting a hysteresis avoids unwanted trigger events caused by noise oscillation around the trigger level.

This setting is only available for "IF Power" trigger sources. The range of the value is between 3 dB and 50 dB with a step width of 1 dB.

Remote command:

[TRIGger\[:SEQUence\]:IFPower:HYSteresis](#) on page 148

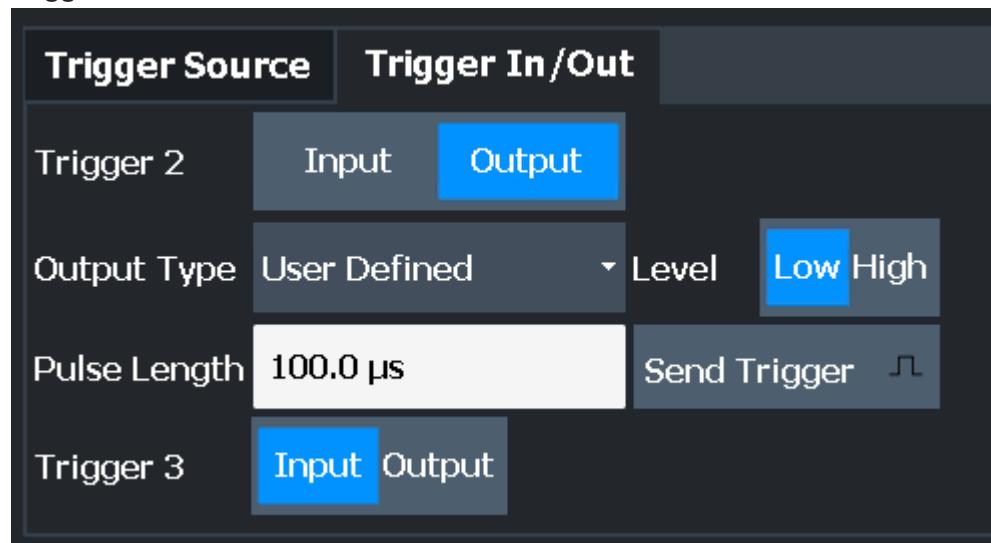

Trigger Holdoff

Defines the minimum time (in seconds) that must pass between two trigger events. Trigger events that occur during the holdoff time are ignored.

Remote command:

[TRIGger\[:SEQUence\]:IFPower:HOLDoff](#) on page 148

Trigger 1/2

The trigger input and output functionality depends on how the variable "Trigger Input/Output" connectors are used.

- "Trigger 1" "Trigger 1": "Trigger Input/Output" connector on the front panel
- "Trigger 2" Defines the usage of the variable "Trigger Input/Output" connector on the rear panel.
- "Input" The signal at the connector is used as an external trigger source by the R&S FSMR3000. Trigger input parameters are available in the "Trigger" dialog box.
- "Output" The R&S FSMR3000 sends a trigger signal to the output connector to be used by connected devices.
Further trigger parameters are available for the connector.

Remote command:

[OUTPut<up>:TRIGger<tp>:DIRection](#) on page 151

Output Type ← Trigger 1/2

Type of signal to be sent to the output

- "Device Triggered" (Default) Sends a trigger when the R&S FSMR3000 triggers.

- "Trigger Armed" Sends a (high level) trigger when the R&S FSMR3000 is in "Ready for trigger" state.
This state is indicated by a status bit in the STATus:OPERation register (bit 5), as well as by a low-level signal at the "AUX" port (pin 9).
- "User Defined" Sends a trigger when you select the "Send Trigger" button.
In this case, further parameters are available for the output signal.

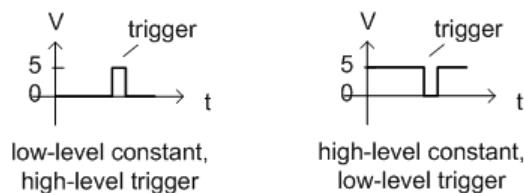

Remote command:

`OUTPut<up>:TRIGger<tp>:OTYPE` on page 152

Level ← Output Type ← Trigger 1/2

Defines whether a high (1) or low (0) constant signal is sent to the trigger output connector (for "Output Type": "User Defined").

The trigger pulse level is always opposite to the constant signal level defined here. For example, for "Level" = "High", a constant high signal is output to the connector until you select the **Send Trigger** function. Then, a low pulse is provided.

Remote command:

`OUTPut<up>:TRIGger<tp>:LEVEL` on page 151

Pulse Length ← Output Type ← Trigger 1/2

Defines the duration of the pulse (pulse width) sent as a trigger to the output connector.

Remote command:

`OUTPut<up>:TRIGger<tp>:PULSE:LENGTH` on page 152

Send Trigger ← Output Type ← Trigger 1/2

Sends a user-defined trigger to the output connector immediately.

Note that the trigger pulse level is always opposite to the constant signal level defined by the output **Level** setting. For example, for "Level" = "High", a constant high signal is output to the connector until you select the "Send Trigger" function. Then, a low pulse is sent.

Which pulse level is sent is indicated by a graphic on the button.

Remote command:

`OUTPut<up>:TRIGger<tp>:PULSE:IMMEDIATE` on page 152

5.6 Data acquisition

Access: "Overview" > "Data Acquisition" > "Acquisition"

Or: [MEAS CONFIG] > "Data Acquisition" > "Acquisition" tab

You must define how much and how data is captured from the input signal.

Acquisition / Detection

Acquisition	Detection
Measurement Bandwidth	
Filter Type	Flat
	Gauss
Meas Bandwidth	200.0 MHz
Sample Rate	512.0 MHz
Measurement Time	
Meas Time	350.0 µs
Record Length	179 200
Long Capture Buffer	Auto
	On
	Off

Input from I/Q data files

If the input source is an I/Q data file, most measurement settings related to data acquisition (attenuation, center frequency, measurement bandwidth, sample rate) cannot be changed. The measurement time can only be decreased, in order to perform measurements on an extract of the available data (from the beginning of the file) only.

For details, see [Chapter 4.4, "Basics on input from I/Q data files"](#), on page 49.

Filter type.....	73
Measurement Bandwidth.....	74
Sample rate.....	74
Measurement Time.....	74
Record length.....	74

Filter type

Defines the filter to be used for demodulation.

"Flat" Standard flat demodulation filter

"Gauss"	Filter with optimized settling behavior (default) Note: For Gaussian filters whose -3dB bandwidth is large compared to the maximum I/Q bandwidth, the ideal Gaussian filter shape would exceed the maximum I/Q bandwidth at its outer edges. Thus, the actual filter only follows the ideal Gaussian filter shape in the inner range of the set I/Q bandwidth. At a certain frequency offset it must deviate from the ideal Gauss filter and drop off faster. For details see Chapter B, "Effects of large gauss filters", on page 337 .
---------	---

Remote command:

[SENSe:] BWIDth:DEMod:TYPE on page 153

Measurement Bandwidth

The measurement bandwidth is defined by the used filter and the sample rate. Either a flat or a Gauss filter are available. For information on supported sample rates and filter bandwidths see the data sheet.

Note: If the input source is an I/Q data file, the measurement bandwidth cannot be changed.

For details, see [Chapter 4.4, "Basics on input from I/Q data files", on page 49](#).

Remote command:

[SENSe:] BANDwidth:DEMod on page 153

Sample rate

The sample rate for I/Q data acquisition is indicated for reference only. It is calculated from the defined measurement bandwidth and measurement time, or taken from the I/Q data input file.

Measurement Time

Defines how long data is captured for analysis ("Meas Time"), or how many samples are captured in each record ("Record Length").

Note: If the input source is an I/Q data file, the measurement time can only be decreased, in order to perform measurements on an extract of the available data (from the beginning of the file) only.

For details, see [Chapter 4.4, "Basics on input from I/Q data files", on page 49](#).

The maximum measurement time in the R&S FSMR3000 Pulse application is limited only by the available memory ("memory limit reached" message is shown in status bar). Note, however, that increasing the measurement time (and thus reducing the available memory space) may restrict the number of measurement channels that can be activated simultaneously on the R&S FSMR3.

Remote command:

[SENSe:] SWEep:TIME on page 155

Record length

The record length for I/Q data acquisition is indicated for reference only. It is calculated from the defined measurement bandwidth and measurement time, or taken from the I/Q data input file.

Remote command:
`[SENSe:]RLENgth?` on page 154

5.7 Sweep settings

Access: [SWEEP]

The sweep settings define how often data from the input signal is acquired and then evaluated.

Continuous Sweep / Run Cont	75
Single Sweep / Run Single	75
Continue Single Sweep	76
Measurement Time	76
Sweep/Average Count	76

Continuous Sweep / Run Cont

After triggering, starts the sweep and repeats it continuously until stopped. This is the default setting.

While the measurement is running, the "Continuous Sweep" softkey and the [RUN CONT] key are highlighted. The running measurement can be aborted by selecting the highlighted softkey or key again. The results are not deleted until a new measurement is started.

Note: Sequencer. If the Sequencer is active, the "Continuous Sweep" softkey only controls the sweep mode for the currently selected channel. However, the sweep mode only takes effect the next time the Sequencer activates that channel, and only for a channel-defined sequence. In this case, a channel in continuous sweep mode is swept repeatedly.

Furthermore, the [RUN CONT] key controls the Sequencer, not individual sweeps. [RUN CONT] starts the Sequencer in continuous mode.

For details on the Sequencer, see the R&S FSMR3 User Manual.

Remote command:

`INITiate<n>:CONTinuous` on page 167

Single Sweep / Run Single

After triggering, starts the number of sweeps set in "Sweep Count". The measurement stops after the defined number of sweeps has been performed.

While the measurement is running, the "Single Sweep" softkey and the [RUN SINGLE] key are highlighted. The running measurement can be aborted by selecting the highlighted softkey or key again.

Note: Sequencer. If the Sequencer is active, the "Single Sweep" softkey only controls the sweep mode for the currently selected channel. However, the sweep mode only takes effect the next time the Sequencer activates that channel, and only for a channel-defined sequence. In this case, the Sequencer sweeps a channel in single sweep mode only once.

Furthermore, the [RUN SINGLE] key controls the Sequencer, not individual sweeps. [RUN SINGLE] starts the Sequencer in single mode.

If the Sequencer is off, only the evaluation for the currently displayed channel is updated.

Remote command:

[INITiate<n>\[:IMMediate\]](#) on page 167

Continue Single Sweep

After triggering, repeats the number of sweeps set in "Sweep Count", without deleting the trace of the last measurement.

While the measurement is running, the "Continue Single Sweep" softkey and the [RUN SINGLE] key are highlighted. The running measurement can be aborted by selecting the highlighted softkey or key again.

Remote command:

[INITiate<n>:CONMeas](#) on page 166

Measurement Time

Defines how long data is captured for analysis ("Meas Time"), or how many samples are captured in each record ("Record Length").

Note: If the input source is an I/Q data file, the measurement time can only be decreased, in order to perform measurements on an extract of the available data (from the beginning of the file) only.

For details, see [Chapter 4.4, "Basics on input from I/Q data files"](#), on page 49.

The maximum measurement time in the R&S FSMR3000 Pulse application is limited only by the available memory ("memory limit reached" message is shown in status bar). Note, however, that increasing the measurement time (and thus reducing the available memory space) may restrict the number of measurement channels that can be activated simultaneously on the R&S FSMR3.

Remote command:

[\[SENSe:\] SWEEp:TIME](#) on page 155

Sweep/Average Count

Defines the number of measurements to be performed in the single sweep mode. Values from 0 to 200000 are allowed. If the values 0 or 1 are set, one measurement is performed.

In continuous sweep mode, if "Sweep Count" = 0 (default), averaging is performed over 10 measurements. For "Sweep Count" =1, no averaging, maxhold or minhold operations are performed.

The "Average Count" also determines the number of measurements used to calculate the pulse trace statistics for the result range displays (see [Chapter 4.5.1, "Trace statistics"](#), on page 51).

Remote command:

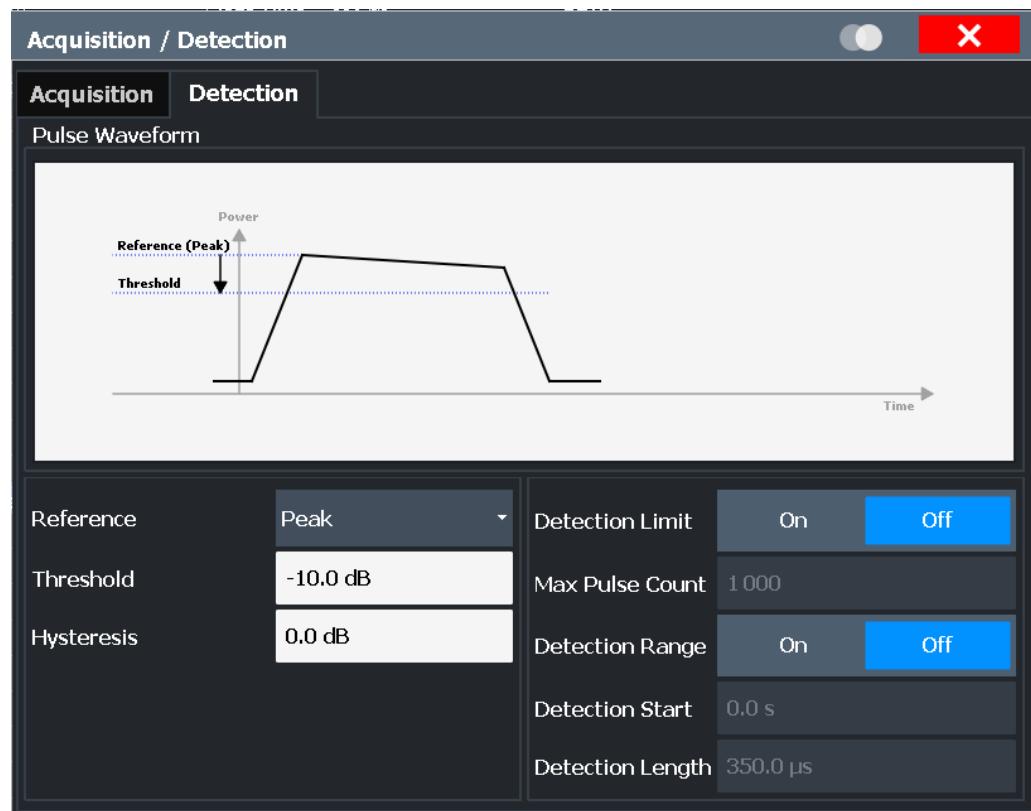

[\[SENSe:\] SWEEp:COUNt](#) on page 168

5.8 Pulse detection

Access: "Overview" > "Detection"

Or: [MEAS CONFIG] > "Data Acquisition" > "Detection" tab

The pulse detection settings define the conditions under which a pulse is detected within the input signal.

Reference Source.....	77
Threshold.....	78
Hysteresis.....	78
Detection Limit.....	78
Maximum Pulse Count.....	78
Detection Range.....	78
Detection Start.....	78
Detection Length.....	79

Reference Source

Defines the level to be used as a reference for the pulse detection threshold.

- "Reference" Current reference level
- "Peak" Peak level as measured over the entire capture data interval
- "Noise" Noise level determined from the current capture data according to the [Min Pulse Off Time](#) parameter set in [Signal description](#).
- "Absolute" Absolute level defined by the [Threshold](#)

Remote command:

[SENSe:] DETect:REference on page 158

Threshold

The threshold determines whether a pulse is detected or not. The top of a pulse must exceed the threshold in order to be detected. The threshold is defined in dB in relation to the defined reference, or as an absolute threshold in dBm.

Remote command:

[SENSe:] DETect:THreshold on page 158

Hysteresis

Defines a hysteresis for pulse detection in dB in relation to the defined threshold. As long as the signal does not exceed the hysteresis, the next threshold crossing is ignored.

Remote command:

[SENSe:] DETect:HYSTeresis on page 157

Detection Limit

Restricts the number of pulses to be detected. When the maximum number is exceeded, measurement is stopped for the current capture buffer. This limitation can be used to speed up the measurement if only a small number of pulses is of interest.

Remote command:

[SENSe:] DETect:LIMit on page 156

Maximum Pulse Count

Defines the maximum number of pulses to be detected.

This limit is ignored if **Detection Limit** is disabled.

Remote command:

[SENSe:] DETect:LIMit:COUNt on page 156

Detection Range

Enables or disables the use of a detection range instead of the entire capture buffer for analysis.

A detection range determines which part of the capture buffer is analyzed. It is defined by the **Detection Start** and the **Detection Length**. An active detection range is indicated in the "Magnitude Capture" Buffer display by vertical lines ("DR").

See also "**Detection range**" on page 46.

Remote command:

[SENSe:] DETect:RANGE on page 157

Detection Start

Defines the beginning of the detection range as the time in seconds from the capture buffer start. You can also change the detection start graphically by dragging the left vertical line ("DR") in the "Magnitude Capture" Buffer.

The pulse numbers in the result displays are always relative to the current detection range, that is: pulse number 1 is the first pulse within the detection range in the capture buffer. (Timestamps are in relation to the capture buffer start.)

Remote command:

[SENSe:] DETect:RANGE:START on page 157

Detection Length

Defines the length of the detection range as a time in seconds. You can also change the detection length graphically by dragging one of the vertical lines ("DR") in the "Magnitude Capture" Buffer.

Remote command:

[SENSe:] DETect:RANGE:LENGTH on page 157

5.9 Pulse measurement settings

Access: "Overview" > "Measurement"

The pulse measurement settings determine how much data is measured for each pulse, in relation to defined levels, points, or ranges. Which definition is actually used during measurement depends on the selected evaluation method.

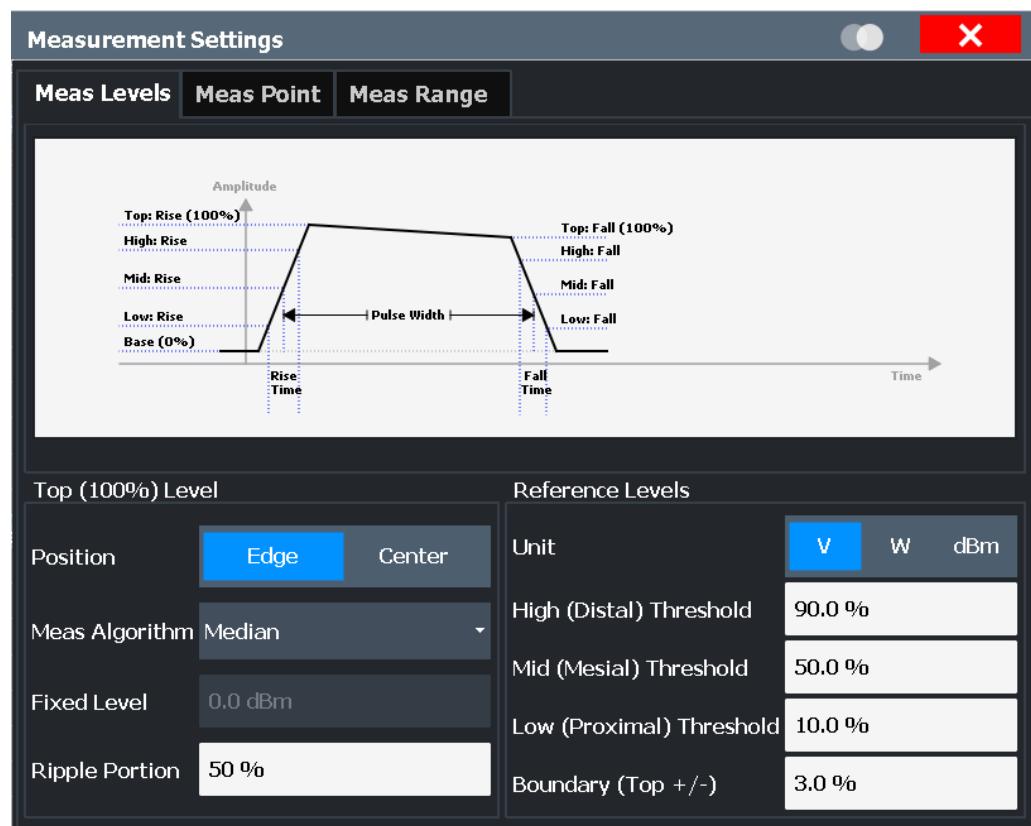

- [Measurement levels](#)..... 79
- [Measurement point](#)..... 82
- [Measurement range](#)..... 84

5.9.1 Measurement levels

Access: "Overview" > "Measurement" > "Meas Levels" tab

Or: [MEAS CONFIG] > "Pulse Meas" > "Meas Levels" tab

Some measurements are performed depending on defined levels.

Position	80
Measurement Algorithm	81
Fixed Value	81
Ripple Portion	81
Reference Level Unit	81
High (Distal) Threshold	81
Mid (Mesial) Threshold	81
Low (Proximal) Threshold	82
Boundary	82

Position

Determines where the 100% value (from base to top) for the rise and fall time measurements is calculated.

This allows you to consider a "droop" in the pulse top during the pulse measurements. If a droop is to be considered, the 100% value must be calculated separately for the rising and falling edges.

"Edge" The 100% value is measured separately for the rising and falling edges.

"Center" The 100% value is measured at the pulse center and used for all measurements.

Remote command:

[SENSe:] TRACe:MEASurement:DEFine:COMPensate:ADRoop on page 160

Measurement Algorithm

Defines the algorithm used to detect the pulse top level.

- | | |
|--------------|---|
| "Mean" | The arithmetic average of the measured values |
| "Median" | The level for which half the values lie above, the other half below in the histogram |
| "Fixed" | A Fixed Value is used.
Useful if some pulses do not reach the top level, but you want to measure them nevertheless, while maintaining a specified top level. |
| "Peak Power" | The peak power is used to detect the pulse top level. |

Remote command:

[\[SENSe:\] TRACe:MEASurement:ALGorithm](#) on page 159

Fixed Value

Defines the value (in dBm) to be used by the "Fixed" measurement algorithm.

Note that if the fixed value is much higher than the actual pulse top level, pulse parameters cannot be measured ("---" indicated in the table results). In this case, reduce the fixed power level or the [High \(Distal\) Threshold](#) used for rise/fall time measurements.

You can also change the fixed top power level graphically, by moving the "100 %" horizontal line in the "Magnitude Capture" Buffer display.

Remote command:

[\[SENSe:\] TRACe:MEASurement:DEFine:TOP:FIXed](#) on page 160

Ripple Portion

Defines the portion of the pulse top which is used to measure the ripple.

Remote command:

[\[SENSe:\] TRACe:MEASurement:DEFine:RIPPLE](#) on page 160

Reference Level Unit

Defines the unit of the pulse amplitude values, i.e. whether magnitude (V) or power (W, dBm) values are used to determine the threshold levels for fall and rise times.

Remote command:

[\[SENSe:\] TRACe:MEASurement:DEFine:AMPLitude:UNIT](#) on page 159

High (Distal) Threshold

The upper threshold in percent of the pulse amplitude used to signify the end of a rising or beginning of a falling signal level.

Remote command:

[\[SENSe:\] TRACe:MEASurement:DEFine:TRANSition:HREference](#) on page 161

Mid (Mesial) Threshold

The middle threshold in percent of the pulse amplitude used to signify the mid-transition level between pulse states.

Remote command:

[\[SENSe:\] TRACe:MEASurement:DEFine:TRANSition:REFerence](#) on page 161

Low (Proximal) Threshold

The lower threshold in percent of the pulse amplitude used to signify the end of a falling or beginning of a rising signal level.

Remote command:

[SENSe:] TRACe:MEASurement:DEFine:TRANSition:LREFerence on page 161

Boundary

The boundary in percent of the pulse amplitude to either side of the pulse top (ON state). Used to determine the settling time, for example. Once the signal remains within the boundary, it is assumed to have settled.

Remote command:

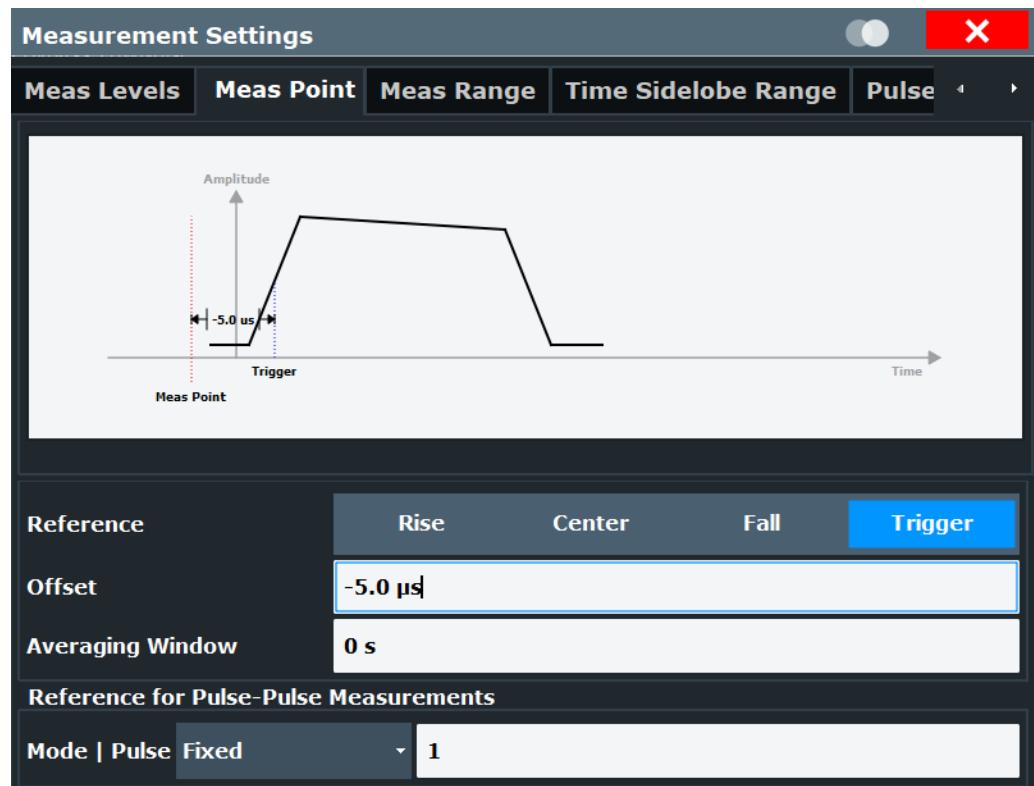

[SENSe:] TRACe:MEASurement:DEFine:BOUNdary:TOP on page 160

5.9.2 Measurement point

Access: "Overview" > "Measurement" > "Meas Point" tab

Or: [MEAS CONFIG] > "Pulse Meas" > "Meas Point" tab

Some specific pulse parameters, e.g. the phase or the frequency, are determined at a specific time instant (measurement point) within the pulse. You can configure this point based on a reference and offset value.

Measurement Point Reference	83
Offset	83
Averaging Window	83
Reference for Pulse-Pulse Measurements	83

Measurement Point Reference

Defines the reference which the [Offset](#) refers to.

- "Rise" The measurement point is defined in reference to the rising edge (mid-level crossing).
- "Center" The measurement point is defined in reference to the center of the pulse (equal distance from the rising and falling mid-level crossings).
- "Fall" The measurement point is defined in reference to the falling edge (mid-level crossing).

Remote command:

[\[SENSe:\] TRACe:MEASurement:DEFIne:PULSe:INSTant:REFerence](#)
on page 162

Offset

The time offset of the measurement point in reference to the pulse center or an edge, depending on the [Measurement Point Reference](#) setting.

The "Offset" is indicated in the dialog box.

Remote command:

[\[SENSe:\] TRACe:MEASurement:DEFIne:PULSe:INSTant](#) on page 162

Averaging Window

Measurement point results are averaged over a window centered at the measurement point. The length of the averaging window in seconds can be defined. A minimum length of 1 sample is enforced internally.

Remote command:

[\[SENSe:\] TRACe:MEASurement:DEFIne:PULSe:INSTant:AWINdow](#) on page 162

Reference for Pulse-Pulse Measurements

Reference pulse on which relative pulse results are based (e.g. for traces normalized to reference pulse, see [Chapter 4.5.2, "Normalizing traces", on page 51](#)).

- "Fixed" A fixed pulse number
Relative results for the specified pulse number itself are not valid and are indicated as "...".
- "Selected" The currently selected pulse (see [Chapter 6.1.1, "Pulse selection", on page 87](#))
Relative results for the selected pulse itself are not valid and are indicated as "...".
If you change the value for the reference pulse here, the [Chapter 6.1.1, "Pulse selection", on page 87](#) value is adapted accordingly, and vice versa.

"Before Pulse"	The nth pulse before the currently evaluated pulse, where n is the specified number No values are available for the first n pulses, as no valid reference pulse is available. These results are indicated as "...". For example, a value of 2 will use row 1 as the reference row for Pulse-Pulse results for pulse number 3. In this case, pulse numbers 1 and 2 will not have a valid reference row and the Pulse-Pulse results will be invalid for these rows.
"After Pulse"	The nth pulse after the currently evaluated pulse, where n is the specified number No values are available for the last n pulses, as no valid reference pulse is available. These results are indicated as "...". For example, a value of 2 will use row 5 as the reference row for Pulse-Pulse results for pulse number 3. In this case, the last two pulse rows will not have a valid reference row and the Pulse-Pulse results will be invalid for these rows.

Remote command:

[\[SENSe:\] TRACe:MEASurement:DEFIne:PULSe:REFerence:POSITION](#)

on page 163

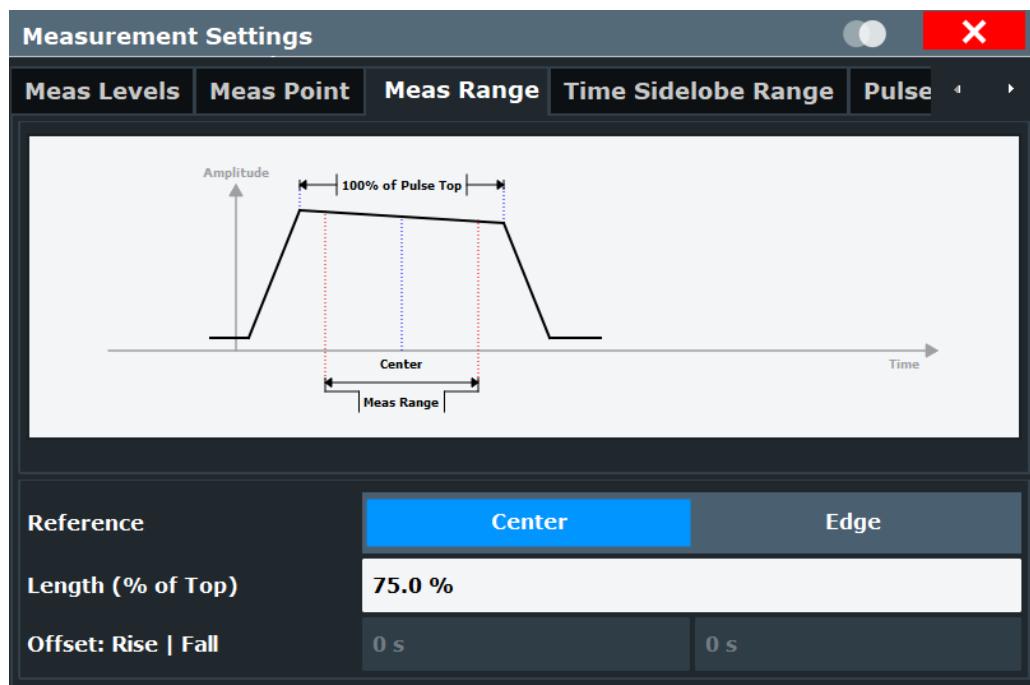

[\[SENSe:\] TRACe:MEASurement:DEFIne:PULSe:REFerence](#) on page 163

5.9.3 Measurement range

Access: "Overview" > "Measurement" > "Meas Range" tab

Or: [MEAS CONFIG] > "Pulse Meas" > "Meas Range" tab

Some measurements are performed over a range within the pulse, for example the phase or frequency deviation. The measurement range is specified either by start and end points relative to the rising and falling edges, or as a proportion of the pulse top.

Reference, Length, Offset..... 85

Reference, Length, Offset

Defines the reference for the measurement range definition. Depending on the selected reference type, an additional setting is available to define the range.

"Center" Defines a relative range around the center of the pulse. The range is defined by its **length** in percent of the pulse top.

"Edge" Defines the start and stop of the measurement range with respect to the pulse edges. The range is defined by a time **offset** from the middle of the **rising edge** and a time offset from the middle of the **falling edge**.

Remote command:

[SENSe:] TRACe:MEASurement:DEFine:PULSe:ESTimation:REFerence
on page 165

Relative range (Center):

[SENSe:] TRACe:MEASurement:DEFine:PULSe:ESTimation:LENgth
on page 164

Absolute range (Edge):

[SENSe:] TRACe:MEASurement:DEFine:PULSe:ESTimation:OFFSet:LEFT
on page 164

[SENSe:] TRACe:MEASurement:DEFine:PULSe:ESTimation:OFFSet:RIGHT
on page 164

5.10 Automatic settings

Access: [AUTO SET]

Some settings can be adjusted by the R&S FSMR3 automatically according to the current measurement settings.

Auto Scale Continuous (All).....	86
Auto Scale Once (All).....	86

Auto Scale Continuous (All)

Automatically determines the optimal result range and reference level position for *each new measurement* in all displayed diagrams (for graphical or pulse-based result displays only).

Remote command:

`SENS:TRAC:MEAS:DEF:RRAN:AUTO ON, see [SENSe:] TRACe:MEASurement: DEFINE:RRAnge:AUTO on page 171`
`DISP:TRAC:Y:SCAL:AUTO ON, see DISPLAY[:WINDOW<n>] [:SUBWindow<n>]: TRACe<t>:Y[:SCALE] :AUTO on page 232`

Auto Scale Once (All)

Automatically determines the optimal result range and reference level position *once* for the *current* measurement settings in all displayed diagrams and pulse-based result displays. All automatic scaling functions are then switched off.

Remote command:

`SENS:TRAC:MEAS:DEF:RRAN:AUTO ONCE, see [SENSe:] TRACe:MEASurement: DEFINE:RRAnge:AUTO on page 171`
`DISP:TRAC:Y:SCAL:AUTO ONCE, see DISPLAY[:WINDOW<n>] [:SUBWindow<n>]: TRACe<t>:Y[:SCALE] :AUTO on page 232`

6 Analysis

After a Pulse measurement has been performed, you can analyze the results in various ways.

● Result configuration.....	87
● Display configuration.....	102
● Markers.....	102
● Trace configuration.....	109
● Trace / data export configuration.....	113
● Export functions.....	115

6.1 Result configuration

Access: "Overview" > "Result Configuration"

Or: [MEAS CONFIG] > "Result Config"

Some evaluation methods require or allow for additional settings to configure the result display. Note that the available settings depend on the selected window (see "[Specific Settings for](#)" on page 57).

● Pulse selection.....	87
● Result range.....	88
● Result range spectrum configuration.....	89
● Result range frequency configuration.....	91
● Parameter configuration for result displays.....	91
● Table configuration.....	97
● Y-Scaling.....	99
● Units.....	101

6.1.1 Pulse selection

Access: [MEAS CONFIG] > "Selected Pulse"

The pulse traces (frequency, magnitude and pulse vs. time) always display the trace for one specific pulse, namely the currently selected pulse. The currently selected pulse is highlighted blue in the "Pulse Results" and "Pulse Statistics" displays.

As soon as a new pulse is selected, all pulse-specific displays are automatically updated.

The selected pulse (number) is relative to the currently defined detection range, if enabled (see "[Detection Range](#)" on page 78). If you change the detection range within the capture buffer, the selected pulse is adapted automatically, and all pulse-based results are updated, if necessary.

Linked markers

In "Parameter Trend" displays, the marker M1 can be linked to the selected pulse (see "[Link Trend M1 to Selected Pulse](#)" on page 107). Thus, if you select a different pulse, the marker M1 is also set to the same pulse, and vice versa.

Remote command:

`[SENSe:] TRACe:MEASUREMENT:DEFine:PULSe:SELected` on page 170

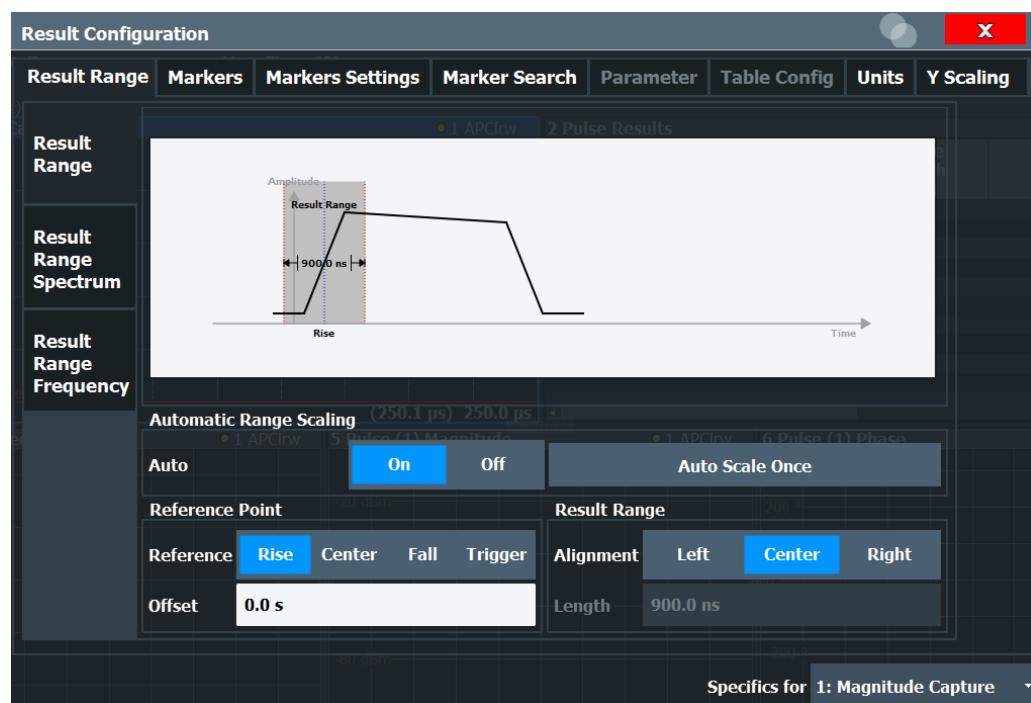

6.1.2 Result range

Access: "Overview" > "Result Configuration" > "Result Range" tab

Or: [MEAS CONFIG] > "Result Config" > "Result Range" tab

The result range determines which data is displayed on the screen (see also "[Measurement range vs. result range vs. detection range](#)" on page 15). This range applies to the "pulse magnitude", frequency and phase vs time displays.

Furthermore, the spectrum for the result range can be displayed (see "[Result Range Spectrum](#)" on page 40).

The range is defined by a reference point, alignment and the range length.

Automatic Range Scaling.....	89
Result Range Reference Point.....	89
Offset.....	89
Alignment.....	89
Length.....	89

Automatic Range Scaling

Defines whether the result range length is determined automatically according to the width of the selected pulse (see [Chapter 6.1.1, "Pulse selection", on page 87](#)).

Note: The result range is applied to all pulse-based result displays.

- "OFF" Switches automatic range scaling off
- "ON" Switches automatic range scaling on
- "ONCE" Executes automatic range scaling once and then switches it off

Remote command:

[\[SENSe:\] TRACE:MEASurement:DEFIne:RRAnge:AUTO](#) on page 171

Result Range Reference Point

Defines the reference point for positioning the result range. The [Offset](#) is given with respect to this value.

- "Rise" The result range is defined in reference to the rising edge.
- "Center" The result range is defined in reference to the center of the pulse top.
- "Fall" The result range is defined in reference to the falling edge.

Remote command:

[\[SENSe:\] TRACE:MEASurement:DEFIne:RRAnge:REFerence](#) on page 172

Offset

The offset in seconds from the pulse edge or center at which the result range reference point occurs.

Remote command:

[\[SENSe:\] TRACE:MEASurement:DEFIne:RRAnge:OFFSet](#) on page 172

Alignment

Defines the alignment of the result range in relation to the selected [Result Range Reference Point](#).

- "Left" The result range starts at the pulse center or selected edge.
- "Center" The result range is centered around the pulse center or selected edge.
- "Right" The result range ends at the pulse center or selected edge.

Remote command:

[\[SENSe:\] TRACE:MEASurement:DEFIne:RRAnge:ALIGNment](#) on page 171

Length

Defines the length or duration of the result range.

Remote command:

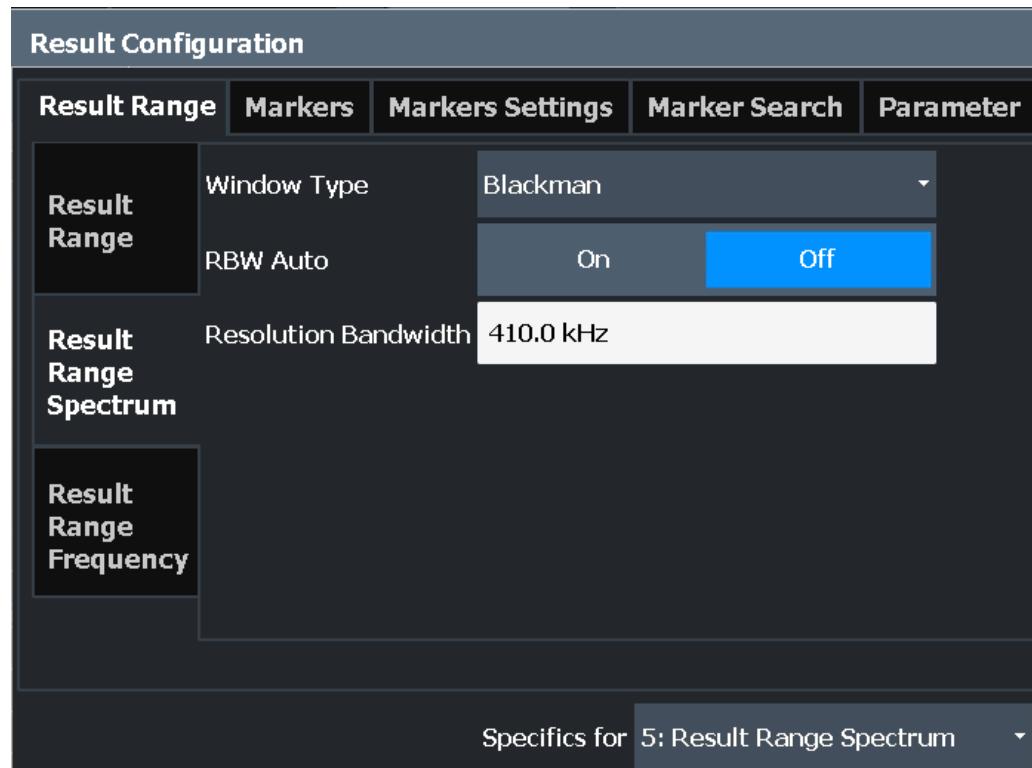

[\[SENSe:\] TRACE:MEASurement:DEFIne:RRAnge:LENGth](#) on page 172

6.1.3 Result range spectrum configuration

Access: "Overview" > "Result Configuration" > "Result Range" tab > "Result Range Spectrum" tab

Or: [MEAS CONFIG] > "Result Config" > "Result Range" tab > "Result Range Spectrum" tab

For the "Result Range Spectrum" display additional settings are available for the FFT.

Window Type	90
ResBW Manual	90
RBW Auto	91

Window Type

Used FFT window type for "Result Range Spectrum". The same window types are available as for "Parameter Spectrum" displays (see "[Window functions](#)" on page 47).

Remote command:

[CALCulate<n>:RRSpectrum:WINDOW](#) on page 207

ResBW Manual

Defines the resolution bandwidth for the "Result Range Spectrum".

The resolution bandwidth defines the minimum frequency separation at which the individual components of a spectrum can be distinguished. Small values lead to high precision results, as the distance between two distinguishable frequencies is small, but require a larger measurement interval (that is: longer [Result Range length](#)) for the calculation. Higher values decrease the precision, but can increase measurement speed.

Remote command:

[CALCulate<n>:RRSpectrum:RBW](#) on page 208

RBW Auto

If activated, a resolution bandwidth is selected automatically which provides a good balance between fast measurement speed and high spectral resolution.

Remote command:

[CALCulate<n>:RRSpectrum:AUTO](#) on page 208

6.1.4 Result range frequency configuration

FM Video Bandwidth

Access: "Bandwidth" > "FM Video Bandwidth"

Additional filters applied after demodulation help filter out unwanted signals, or correct pre-emphasized input signals.

- Relative low pass filters:
Relative filters (3 dB) can be selected in % of the analysis (demodulation) bandwidth. The filters are designed as 5th-order Butterworth filters (30 dB/octave) and active for all demodulation bandwidths.
- "None" deactivates the FM video bandwidth (default).

Remote command:

[\[SENSe:\] DEMod:FMVF:TYPE](#) on page 154

6.1.5 Parameter configuration for result displays

Access: "Overview" > "Result Configuration" > "Parameter" tab

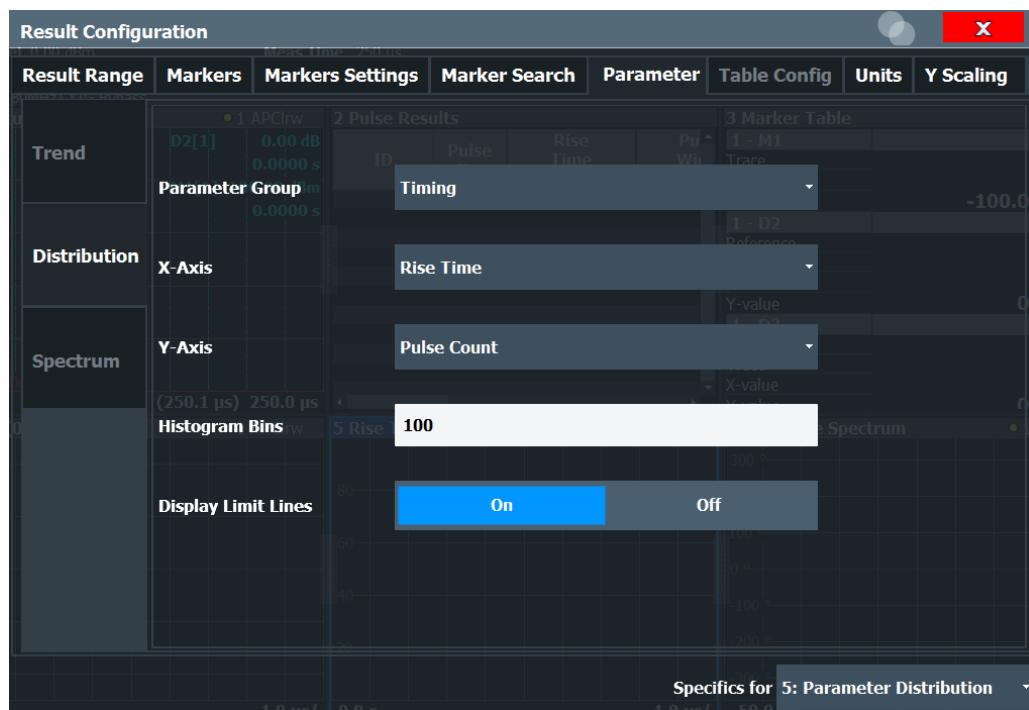

For "parameter trend", spectrum, or distribution displays you can define which parameters are to be evaluated in each window.

- [Parameter distribution configuration](#)..... 91
- [Parameter spectrum configuration](#)..... 93
- [Parameter trend configuration](#)..... 95

6.1.5.1 Parameter distribution configuration

Access: "Overview" > "Result Configuration" > "Parameter" > "Distribution"

The "parameter distribution" evaluations allow you to visualize the number of occurrences for a specific parameter value within the current capture buffer. For each "parameter distribution" window you can configure which measured parameter is to be displayed.

This tab is only available for windows with a Parameter Distribution evaluation.

Parameter Group	92
X-Axis	92
Y-Axis	92
Histogram Bins	93
Display Limit Lines	93

Parameter Group

Defines the group of parameters from which one can be selected to display the distribution of the measured values on the y-axis. For a description of the parameters see [Chapter 3.1, "Pulse parameters", on page 15](#).

X-Axis

Defines the parameter for which the values are displayed on the x-axis. The available parameters depend on the selected [Parameter Group](#).

Remote command:

`CALCulate<n>:DISTRIBUTION:<GroupName> <X-Axis>,<Y-Axis>, see e.g. CALCulate<n>:DISTRIBUTION:FREQuency on page 174`

Y-Axis

Defines the scaling of the y-axis.

"Pulse count" Number of pulses in which the value occurred.

"Occurrence" Number of occurrences in percent of all measured values.

Histogram Bins

Number of columns on the x-axis, i.e. the number of measurement value ranges for which the occurrences are determined.

Remote command:

[CALCulate<n>:DISTribution:NBINs](#) on page 175

Display Limit Lines

Hides or shows the limit lines in the selected Parameter Trend or Parameter Distribution result display. You can drag these lines to a new position in the window. The new position is maintained, the limit check is repeated, and the results of the limit check in any active table displays are adapted.

Note that this function only has an effect on the visibility of the lines in the graphical displays, it does not affect the limit check in general or the display of the limit check results in the table displays.

Remote command:

[CALCulate<n>:DISTribution:LLINes\[:STATE\]](#) on page 175

[CALCulate<n>:TREnd:LLINes\[:STATE\]](#) on page 196

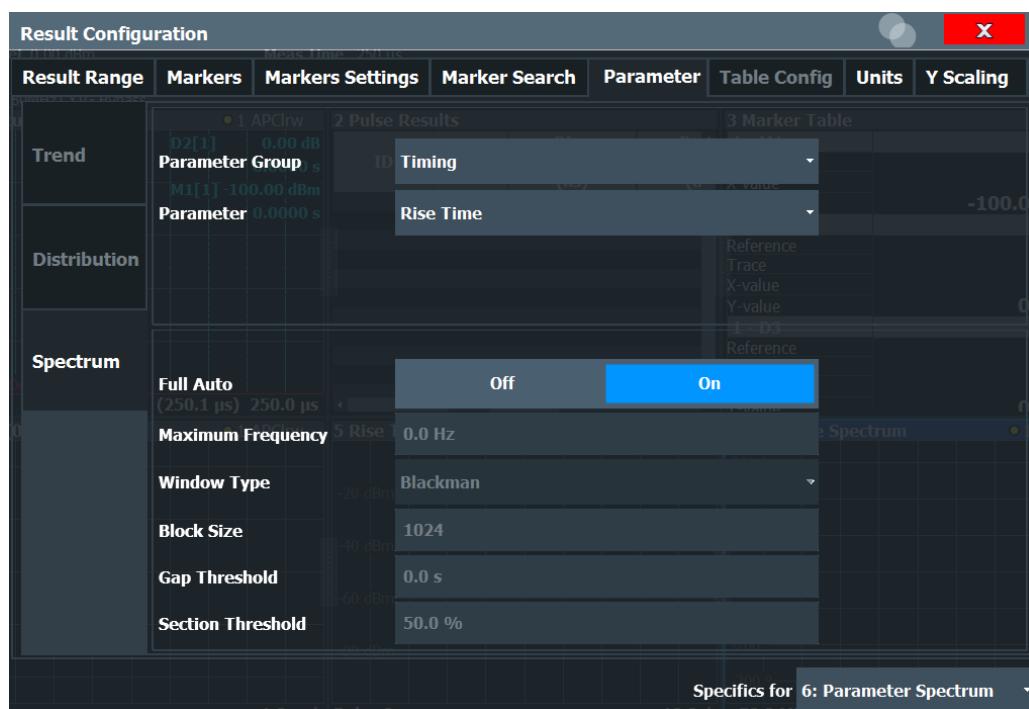

6.1.5.2 Parameter spectrum configuration

Access: "Overview" > "Result Configuration" > "Parameter" > "Spectrum"

A "parameter spectrum" displays the results of an FFT for a selected column of the "Pulse Results" table. This "spectrum" allows you to easily determine the frequency of periodicities in the pulse parameters.

For each "Parameter Spectrum" window you can configure which measured parameter is to be displayed and how the spectrum is determined.

The pulse-to-pulse spectrum is basically a "parameter spectrum" based on complex I/Q data. You cannot select a parameter for the spectrum. All other settings are identical to the "parameter spectrum".

This tab is only available for windows with a "Parameter Spectrum" evaluation.

For more information on how the "parameter spectrum" is calculated see [Chapter 4.3, "Parameter spectrum calculation"](#), on page 46.

Parameter Group.....	94
Parameter.....	94
Full Auto.....	95
Maximum Frequency.....	95
Window Type.....	95
Block Size.....	95
Gap Threshold.....	95
Section Threshold.....	95

Parameter Group

Defines the group of parameters from which one can be selected to display the FFT of the measured values. For a description of the parameters see [Chapter 3.1, "Pulse parameters"](#), on page 15.

Parameter

Defines the parameter for which the FFT is calculated and displayed. The available parameters depend on the selected [Parameter Group](#).

Remote command:

`CALCulate<n>:PSpectrum:<GroupName> <X-Axis>, see e.g. CALCulate<n>:PSpectrum:FREQuency on page 181`

Full Auto

Determines the "Parameter Spectrum" settings automatically. For most measurement cases, automatic configuration should be suitable.

If enabled, the individual settings are not available.

Remote command:

[CALCulate<n>:PSpectrum:AUTO](#) on page 179

Maximum Frequency

Defines the maximum frequency span for which the Spectrum is calculated. Internally, the span is limited by the number of possible interpolation samples (100 000). Limiting the span to the actually required frequencies decreases the calculation time and can improve the obtained RBW.

Remote command:

[CALCulate<n>:PSpectrum:MAXFrequency](#) on page 182

Window Type

Used FFT window type

Remote command:

[CALCulate<n>:PSpectrum:WINDOW](#) on page 185

Block Size

Size of block used in spectrum calculation. Windowing and averaging are used to combine blocks. The block size also determines the resulting RBW of the spectrum.

Remote command:

[CALCulate<n>:PSpectrum:BLOCKsize](#) on page 180

Gap Threshold

Minimum time that must pass before a gap is detected as such.

Remote command:

[CALCulate<n>:PSpectrum:GTHreshold](#) on page 182

Section Threshold

Minimum section size as a percentage of the block size. Sections that are smaller than the threshold are ignored and considered to be in the detected gap.

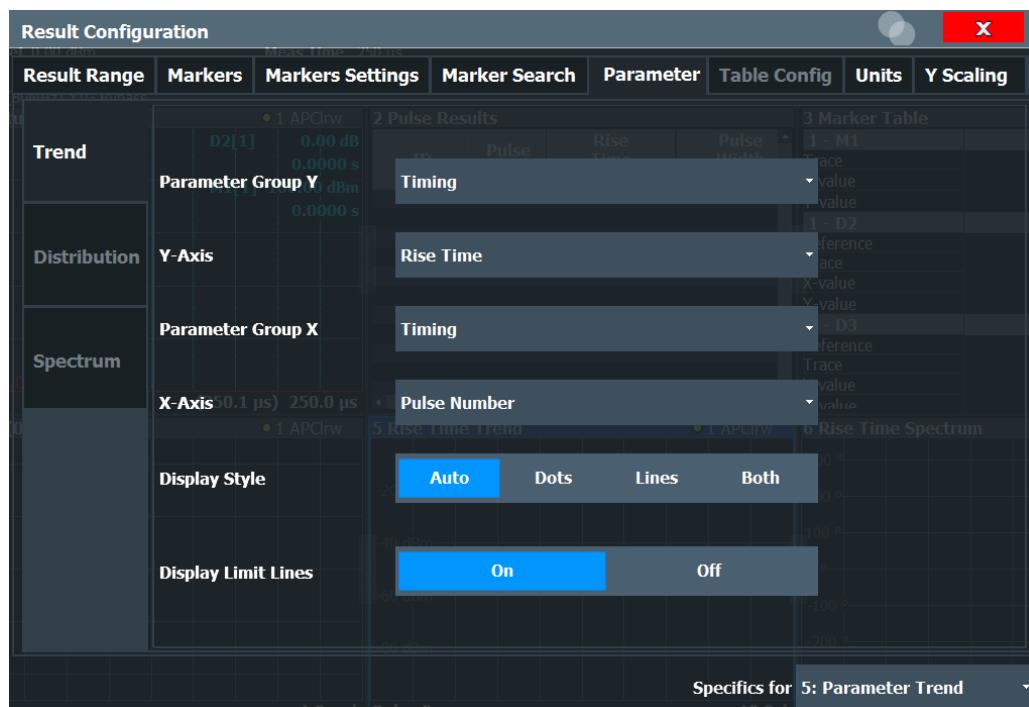

Remote command:

[CALCulate<n>:PSpectrum:STHreshold](#) on page 184

6.1.5.3 Parameter trend configuration

Access: "Overview" > "Result Configuration" > "Parameter" tab > "Trend" tab

The parameter trend result displays allow you to visualize changes in a specific parameter for all measured pulses within the current capture buffer. For each parameter trend window you can configure which measured parameter is to be displayed on the x-axis and which on the y-axis.

This tab is only available for windows with a Parameter Trend result display.

Parameter Group Y	96
Y-Axis	96
Parameter Group X	96
X-Axis	97
Display Limit Lines	97

Parameter Group Y

Defines the group of parameters from which one can be selected to display the trend on the y-axis. For a description of the parameters see [Chapter 3.1, "Pulse parameters"](#), on page 15.

Y-Axis

Defines the parameter for which the trend is displayed on the y-axis. The available parameters depend on the selected "Parameter Group Y" on page 96.

Remote command:

`CALCulate<n>:TRENd:<GroupName>:Y, see e.g. CALCulate<n>:TRENd: FREQuency:Y on page 195`

`CALCulate<n>:TRENd:<GroupName> Y, X, see e.g. CALCulate<n>:TRENd: FREQuency on page 193`

Parameter Group X

Defines the group of parameters from which one can be selected to display the trend on the x-axis. For a description of the parameters see [Chapter 3.1, "Pulse parameters"](#), on page 15.

X-Axis

Defines the parameter for which the trend is displayed on the y-axis. The available parameters depend on the selected [Parameter Group X](#).

Remote command:

`CALCulate<n>:TREND:<GroupName>:X, see e.g. CALCulate<n>:TREND:FREQuency:X on page 194`

`CALCulate<n>:TREND:<GroupName> Y, X, see e.g. CALCulate<n>:TREND:FREQuency on page 193`

Display Limit Lines

Hides or shows the limit lines in the selected Parameter Trend or Parameter Distribution result display. You can drag these lines to a new position in the window. The new position is maintained, the limit check is repeated, and the results of the limit check in any active table displays are adapted.

Note that this function only has an effect on the visibility of the lines in the graphical displays, it does not affect the limit check in general or the display of the limit check results in the table displays.

Remote command:

`CALCulate<n>:DISTribution:LLINes[:STATE] on page 175`

`CALCulate<n>:TREND:LLINes[:STATE] on page 196`

6.1.6 Table configuration

Access: "Overview" > "Result Configuration" > "Table Config"

During each measurement, a large number of statistical and characteristic values are determined. The "Pulse Statistics" and "Pulse Results" result displays provide an overview of the parameters selected here.

Note that the "Result Configuration" dialog box is window-specific; table configuration settings are only available if a table display is selected. However, the table configuration applies to *all* tables, regardless of which table is selected.

Select the parameters to be included in the tables, and the required unit scaling, if available. For a description of the individual parameters see [Chapter 3.1, "Pulse parameters"](#), on page 15.

Table export configuration is described in ["Table Export Configuration"](#) on page 116.

Remote command:

`CALCulate<n>:TABLE:<GroupName>:<ParamName>, see Chapter 9.12.8, "Configuring the statistics and parameter tables", on page 208`

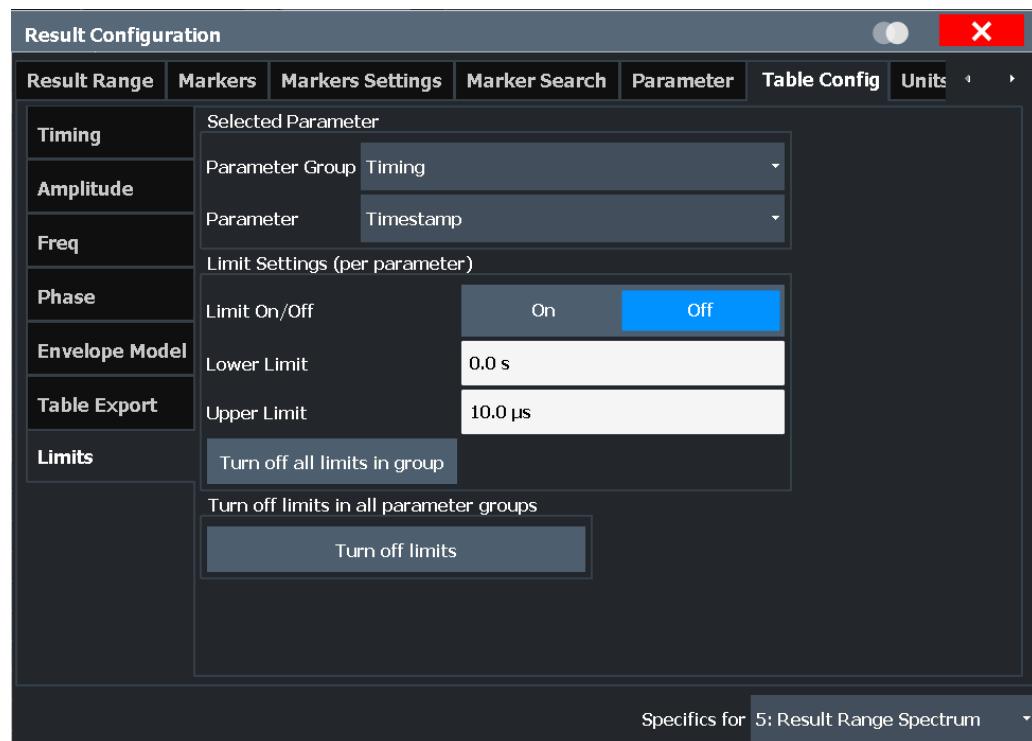

- [Limit settings for table displays](#)..... 97

6.1.6.1 Limit settings for table displays

Access: "Overview" > "Result Configuration" > "Table Config" > "Limits"

Measurement results can be checked against defined limits and the results of the limit check can then be indicated in the Result Table.

For details on limits see "[Pulse Results](#)" on page 37.

The settings are window-specific and only available for result tables.

Optionally, limit lines can be displayed in the [Parameter Distribution](#) and [Parameter Trend](#) diagrams. You can drag these lines to a new position in the window. The new position is maintained, the limit check is repeated, and the results of the limit check in any active table displays are adapted.

Parameter Group	98
Parameter	98
Activating a limit check for a parameter	99
Defining lower and upper limits for a parameter	99
Deactivating a limit check for an entire parameter group	99
Deactivating all limit checks for all parameter groups	99

Parameter Group

Defines the group of parameters from which one can be selected to define limits. For a description of the parameters see [Chapter 3.1, "Pulse parameters"](#), on page 15.

Parameter

Defines the parameter for which the limits are to be defined. The available parameters depend on the selected [Parameter Group](#).

Activating a limit check for a parameter

To activate a limit check for the selected parameter, set "Limit On/Off" to "ON".

Remote command:

`CALCulate<n>:TABLE:<ParameterGroup>:<Parameter>:LIMIT:STATE`
on page 227

Defining lower and upper limits for a parameter

The "Lower Limit" and "Upper Limit" define the valid value range for the limit check for the selected parameter.

Remote command:

`CALCulate<n>:TABLE:<ParameterGroup>:<Parameter>:LIMIT` on page 229

Deactivating a limit check for an entire parameter group

To deactivate all limits for an entire parameter group at once, select "Turn off all limits in group". This function is identical to setting "Limit On/Off" to "OFF" for each parameter in the group.

Remote command:

`CALCulate<n>:TABLE:<ParameterGroup>:ALL:LIMIT:STATE` on page 228

Deactivating all limit checks for all parameter groups

To deactivate all limits for all parameter groups at once, select "Turn off limits". This function is identical to setting "Limit On/Off" to "OFF" for each parameter in each group.

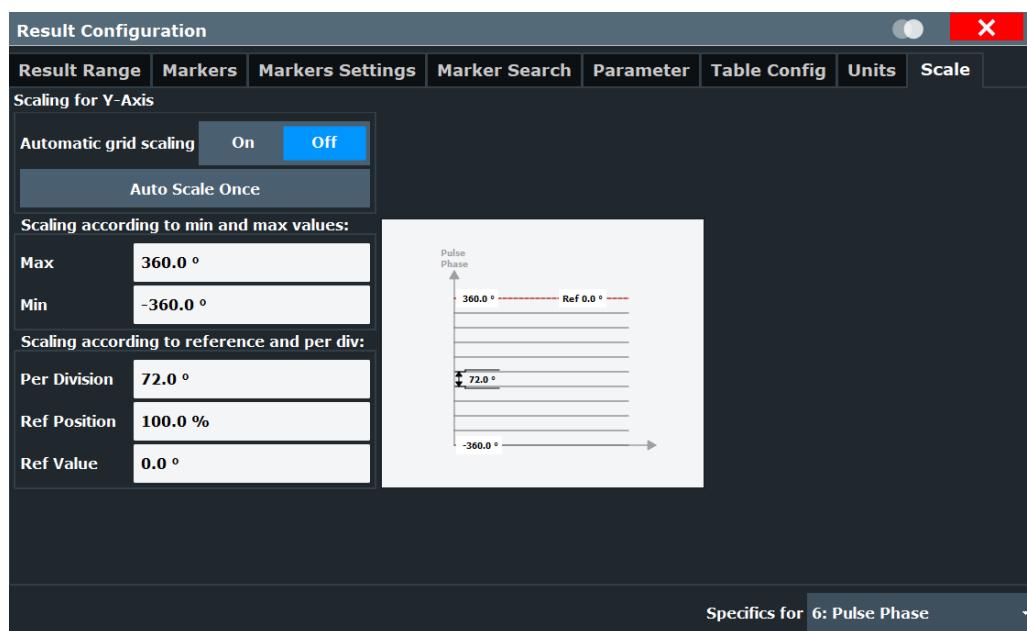

Remote command:

`CALCulate<n>:TABLE:ALL:LIMIT:STATE` on page 229

6.1.7 Y-Scaling

Access: "Overview" > "Result Configuration" > "Y Scaling"

The scaling for the vertical axis is highly configurable, using either absolute or relative values.

Automatic Grid Scaling.....	100
Auto Scale Once.....	100
Absolute Scaling (Min/Max Values).....	101
Relative Scaling (Reference/ per Division).	101
└ Per Division.....	101
└ Ref Position.....	101
└ Ref Value.....	101

Automatic Grid Scaling

The y-axis is scaled automatically according to the current measurement settings and results (continuously).

Note: If a limit is defined for a parameter that is displayed in a [Parameter Trend](#) diagram (see "[Activating a limit check for a parameter](#)" on page 99), autoscaling is not available for the axis this parameter is displayed on.

Note: Tip: To update the scaling automatically *once* when this setting for continuous scaling is off, use the "["Auto Scale Once"](#) on page 100 button or the softkey in the [AUTO SET] menu.

Remote command:

[DISPLAY\[:WINDOW<n>\]\[:SUBWindow<n>\]:TRACe<t>:Y\[:SCALe\]:AUTO](#)
on page 232

Auto Scale Once

Automatically determines the optimal range and reference level position to be displayed for the current measurement settings.

The display is only set once; it is not adapted further if the measurement settings are changed again.

Remote command:

[DISPLAY\[:WINDOW<n>\]\[:SUBWindow<n>\]:TRACe<t>:Y\[:SCALe\]:AUTO](#)
on page 232

Absolute Scaling (Min/Max Values)

Define the scaling using absolute minimum and maximum values.

Remote command:

[DISPLAY\[:WINDOW<n>\]:TRACE<t>:Y\[:SCALE\]:MAXimum](#) on page 232

[DISPLAY\[:WINDOW<n>\]:TRACE<t>:Y\[:SCALE\]:MINimum](#) on page 232

Relative Scaling (Reference/ per Division)

Define the scaling relative to a reference value, with a specified value range per division.

Per Division ← Relative Scaling (Reference/ per Division)

Defines the value range to be displayed per division of the diagram (1/10 of total range).

Note: The value defined per division refers to the default display of 10 divisions on the y-axis. If fewer divisions are displayed (e.g. because the window is reduced in height), the range per division is increased in order to display the same result range in the smaller window. In this case, the per division value does not correspond to the actual display.

Remote command:

[DISPLAY\[:WINDOW<n>\]\[:SUBWindow<w>\]:TRACE<t>:Y\[:SCALE\]:PDIVision](#) on page 233

Ref Position ← Relative Scaling (Reference/ per Division)

Defines the position of the reference value in percent of the total y-axis range.

Remote command:

[DISPLAY\[:WINDOW<n>\]\[:SUBWindow<w>\]:TRACE<t>:Y\[:SCALE\]:RPOSITION](#) on page 233

Ref Value ← Relative Scaling (Reference/ per Division)

Defines the reference value to be displayed at the specified reference position.

Remote command:

[DISPLAY\[:WINDOW<n>\]:TRACE<t>:Y\[:SCALE\]:RVALUE](#) on page 234

6.1.8 Units

Access: "Overview" > "Result Configuration" > "Units"

The unit for phase display is configurable.

Phase Unit	101
Phase Normalization	102
Frequency Scaling	102

Phase Unit

Defines the unit in which phases are displayed (degree or rad).

Remote command:

[UNIT:ANGLE](#) on page 234

Phase Normalization

Normalizes "pulse phase" traces to a specific phase value. For details see "[Normalization of pulse phase traces](#)" on page 54.

This function is only available for "Pulse Phase" and "Pulse Phase (Wrapped)" result displays.

Remote command:

`DISPlay[:WINDOW<n>]:TRACE<t>:NORMalize:PHASe` on page 246

Frequency Scaling

Switches between relative (default) and absolute frequency values. This setting applies to "Pulse Frequency", Result Range Spectrum, "Parameter Distribution" and "Parameter Trend" result displays.

Remote command:

`CALCulate<n>:UNIT:FREQuency` on page 231

6.2 Display configuration

Access: [MEAS]

Or: [MEAS CONFIG] > "Display Config"

The captured signal can be displayed using various evaluations. All evaluations available for the Pulse application are displayed in the evaluation bar in SmartGrid mode.

Up to six evaluation methods can be displayed simultaneously in separate windows. The Pulse evaluation methods are described in [Chapter 3, "Measurements and result displays", on page 15](#).

For details on working with the SmartGrid see the R&S FSMR3 Getting Started manual.

6.3 Markers

Access: "Overview" > "Result Configuration" > "Markers"

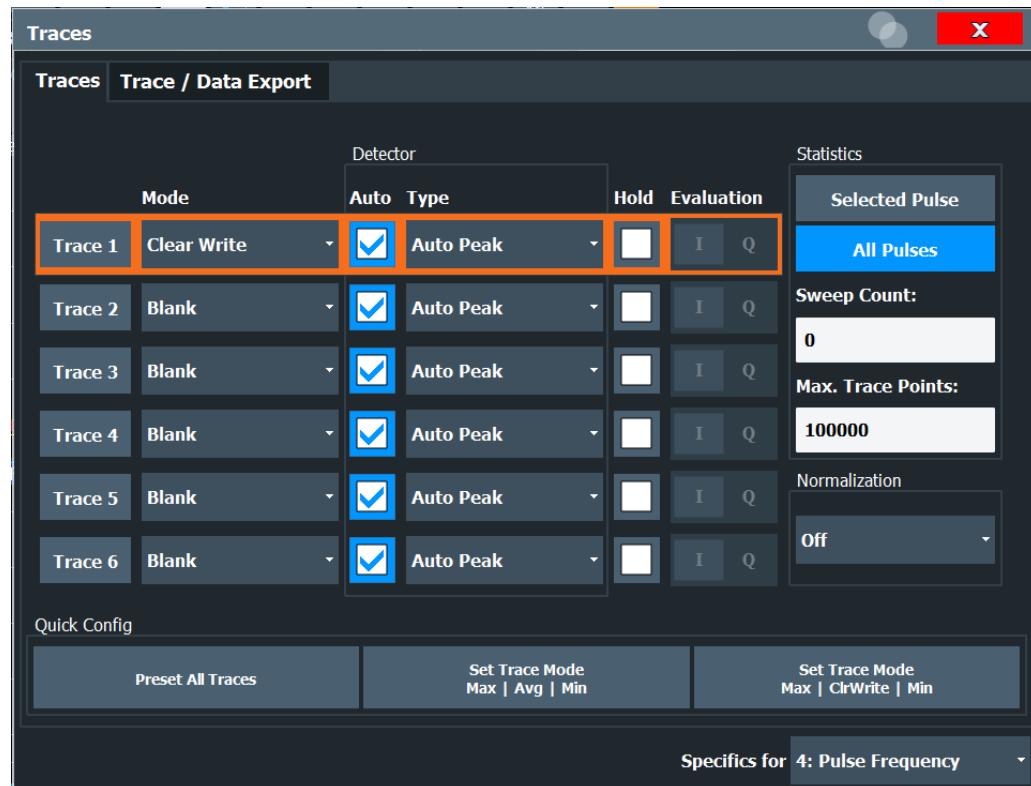

Markers help you analyze your measurement results by determining particular values in the diagram. Thus you can extract numeric values from a graphical display.

- [Individual marker settings](#)..... 102
- [General marker settings](#)..... 105
- [Marker search settings](#)..... 107
- [Marker positioning functions](#)..... 108

6.3.1 Individual marker settings

Access: "Overview" > "Result Configuration" > "Markers"

Up to 17 markers or delta markers can be activated for each window simultaneously.

Selected Marker	103
Marker State	103
X-value	103
Marker Type	104
Reference Marker	104
Linking to Another Marker	104
Assigning the Marker to a Trace	105
Select Marker	105
All Markers Off	105

Selected Marker

Marker name. The marker which is currently selected for editing is highlighted orange.

Remote command:

Marker selected via suffix <m> in remote commands.

Marker State

Activates or deactivates the marker in the diagram.

Remote command:

`CALCulate<n>:MARKer<m>[:STATE]` on page 249

`CALCulate<n>:DELTamarker<m>[:STATE]` on page 252

X-value

Defines the position of the marker on the x-axis.

Note: Setting markers in "Parameter Trend" Displays. In "Parameter Trend" displays, especially when the x-axis unit is not pulse number, positioning a marker by defining its x-axis value can be very difficult or unambiguous. Thus, markers can be positioned by defining the corresponding pulse number in the "Marker" edit field for all parameter trend displays, regardless of the displayed x-axis parameter. The "Marker" edit field is displayed when you select one of the "Marker" softkeys.

Remote command:

[CALCulate<n>:DELTAmarker<m>:X](#) on page 253

[CALCulate<n>:MARKer<m>:X](#) on page 250

Marker Type

Toggles the marker type.

The type for marker 1 is always "Normal", the type for delta marker 1 is always "Delta". These types cannot be changed.

Note: If normal marker 1 is the active marker, switching the "Mkr Type" activates an additional delta marker 1. For any other marker, switching the marker type does not activate an additional marker, it only switches the type of the selected marker.

"Normal" A normal marker indicates the absolute value at the defined position in the diagram.

"Delta" A delta marker defines the value of the marker relative to the specified reference marker (marker 1 by default).

Remote command:

[CALCulate<n>:MARKer<m>\[:STATe\]](#) on page 249

[CALCulate<n>:DELTAmarker<m>\[:STATe\]](#) on page 252

Reference Marker

Defines a marker as the reference marker which is used to determine relative analysis results (delta marker values).

Remote command:

[CALCulate<n>:DELTAmarker<m>:MREFerence](#) on page 252

Linking to Another Marker

Links the current marker to the marker selected from the list of active markers. If the x-axis value of the initial marker is changed, the linked marker follows to the same position on the x-axis. Linking is off by default.

Using this function you can set two markers on different traces to measure the difference (e.g. between a max hold trace and a min hold trace or between a measurement and a reference trace).

Remote command:

[CALCulate<n>:MARKer<ms>:LINK:TO:MARKer<md>](#) on page 249

[CALCulate<n>:DELTAmarker<ms>:LINK:TO:MARKer<md>](#) on page 251

[CALCulate<n>:DELTAmarker<m>:LINK](#) on page 251

Assigning the Marker to a Trace

The "Trace" setting assigns the selected marker to an active trace. The trace determines which value the marker shows at the marker position. If the marker was previously assigned to a different trace, the marker remains on the previous frequency or time, but indicates the value of the new trace.

If a trace is turned off, the assigned markers and marker functions are also deactivated.

Remote command:

[CALCulate<n>:MARKer<m>:TRACe](#) on page 250

Select Marker

The "Select Marker" function opens a dialog box to select and activate or deactivate one or more markers quickly.

Select Marker								
Selected	State	Selected	State	Selected	State	Selected	State	
Marker 1	On	Off	Delta 6	On	Off	Delta 12	On	Off
Delta 1	On	Off	Delta 7	On	Off	Delta 13	On	Off
Delta 2	On	Off	Delta 8	On	Off	Delta 14	On	Off
Delta 3	On	Off	Delta 9	On	Off	Delta 15	On	Off
Delta 4	On	Off	Delta 10	On	Off	Delta 16	On	Off
Delta 5	On	Off	Delta 11	On	Off			

Remote command:

[CALCulate<n>:MARKer<m>\[:STATE\]](#) on page 249

[CALCulate<n>:DELTamarker<m>\[:STATE\]](#) on page 252

All Markers Off

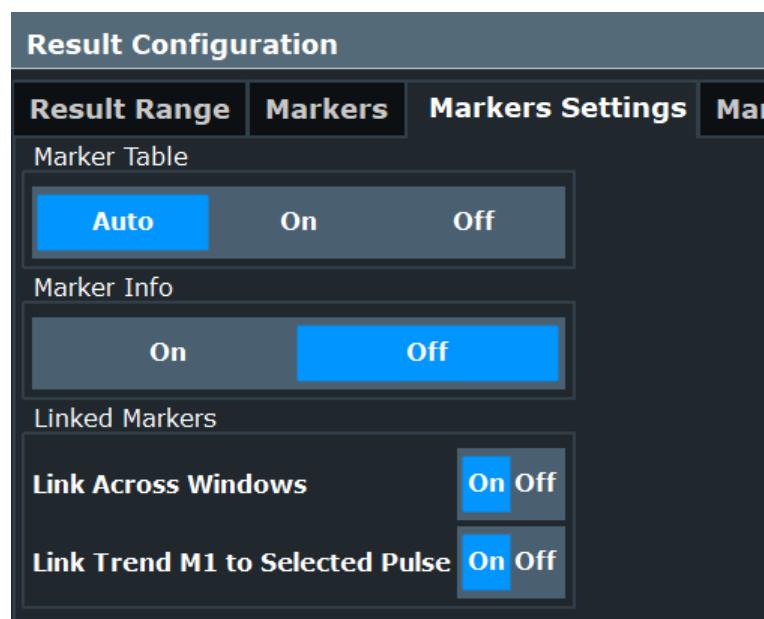

Deactivates all markers in one step.

Remote command:

[CALCulate<n>:MARKer<m>:AOFF](#) on page 249

6.3.2 General marker settings

Access: "Overview" > "Result Configuration" > "Marker Settings"

Marker Table Display

Defines how the marker information is displayed.

- "On" Displays the marker information in a table in a separate area beneath the diagram.
- "Off" No separate marker table is displayed.
If **Marker Info** is active, the marker information is displayed within the diagram area.
- "Auto" (Default) If more than two markers are active, the marker table is displayed automatically.
If **Marker Info** is active, the marker information for up to two markers is displayed in the diagram area.

Remote command:

[DISPLAY\[:WINDOW<n>\]:MTABLE](#) on page 255

Marker Info

Turns the marker information displayed in the diagram on and off.

● 1AP Clrw	
M1[1]	81.13 dBpV 177.610 MHz
D2[1]	-22.18 dB -28.980 MHz

Remote command:

[DISPLAY\[:WINDOW<n>\]:MINFO\[:STATE\]](#) on page 255

Linked Markers Across Windows

If enabled, the markers in all diagrams with the same x-axis are linked, i.e. when you move a marker in one window, the markers in all other windows are moved to the same x-value.

In particular, markers in all pulse measurement displays (such as "Pulse Magnitude", "Pulse Phase" etc.) are linked, if enabled. Similarly, markers in all "Parameter Trend" displays can be linked.

Remote command:

`CALCulate<n>:MARKer<m>:LINK` on page 254

Link Trend M1 to Selected Pulse

If enabled, marker M1 in "Parameter Trend" displays is linked to the pulse selection. Thus, if you move the marker M1 to a different pulse, the **Pulse selection** is set to the same pulse, and vice versa.

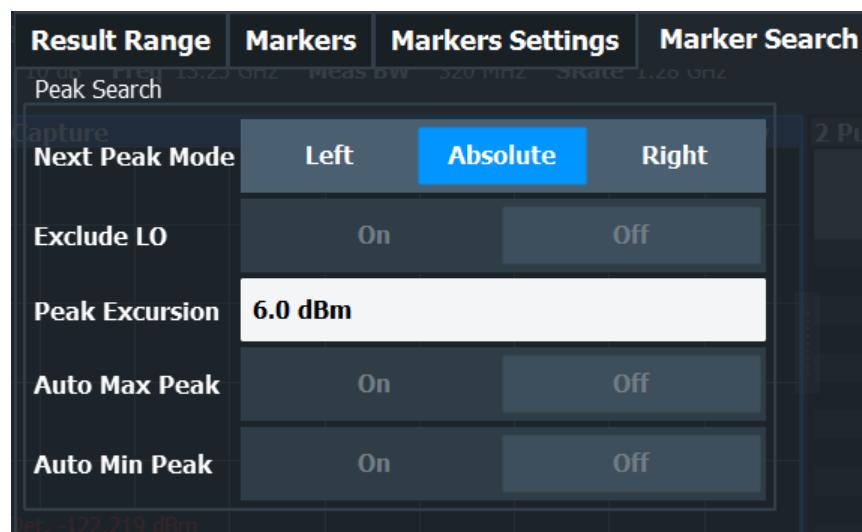

Note that this function is only available if **Linked Markers Across Windows** is also enabled.

Remote command:

`CALCulate<n>:MARKer<m>:LINK:TREND` on page 254

6.3.3 Marker search settings

Markers are commonly used to determine peak values, i.e. maximum or minimum values, in the measured signal. Configuration settings allow you to influence the peak search results.

Search Mode for Next Peak.....	107
Peak Excursion.....	108

Search Mode for Next Peak

Selects the search mode for the next peak search.

"Left"	Determines the next maximum/minimum to the left of the current peak.
"Absolute"	Determines the next maximum/minimum to either side of the current peak.
"Right"	Determines the next maximum/minimum to the right of the current peak.

Remote command:

[Chapter 9.15.3, "Positioning the marker", on page 256](#)

Peak Excursion

Defines the minimum level value by which a signal must rise or fall so that it is identified as a maximum or a minimum by the search functions.

Remote command:

[CALCulate<n>:MARKer<m>:PEXCursion](#) on page 254

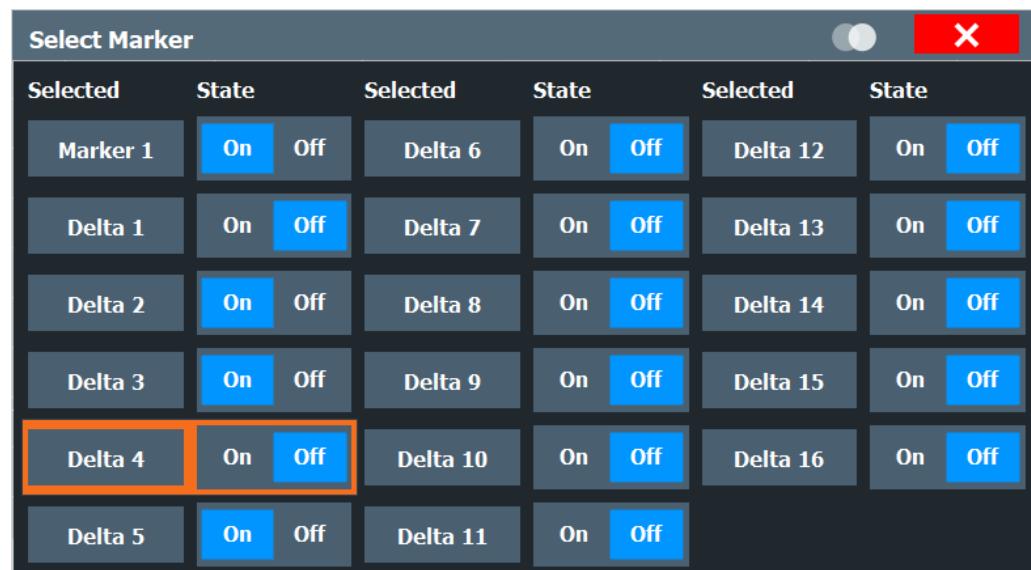

6.3.4 Marker positioning functions

The following functions set the currently selected marker to the result of a peak search or set other characteristic values to the current marker value.

Select Marker.....	108
Peak Search.....	109
Search Minimum.....	109

Select Marker

The "Select Marker" function opens a dialog box to select and activate or deactivate one or more markers quickly.

Remote command:

[CALCulate<n>:MARKer<m>\[:STATe\]](#) on page 249

[CALCulate<n>:DELTAmarker<m>\[:STATe\]](#) on page 252

Peak Search

Sets the selected marker/delta marker to the maximum of the trace. If no marker is active, marker 1 is activated.

Remote command:

[CALCulate<n>:MARKer<m>:MAXimum\[:PEAK\]](#) on page 256

[CALCulate<n>:DELTAmarker<m>:MAXimum\[:PEAK\]](#) on page 258

Search Minimum

Sets the selected marker/delta marker to the minimum of the trace. If no marker is active, marker 1 is activated.

Remote command:

[CALCulate<n>:MARKer<m>:MINimum\[:PEAK\]](#) on page 257

[CALCulate<n>:DELTAmarker<m>:MINimum\[:PEAK\]](#) on page 259

6.4 Trace configuration

Traces in graphical result displays based on the defined result range (see [Chapter 6.1.2, "Result range"](#), on page 88) can be configured, for example to perform statistical evaluations over a defined number of measurements, pulses, or samples.

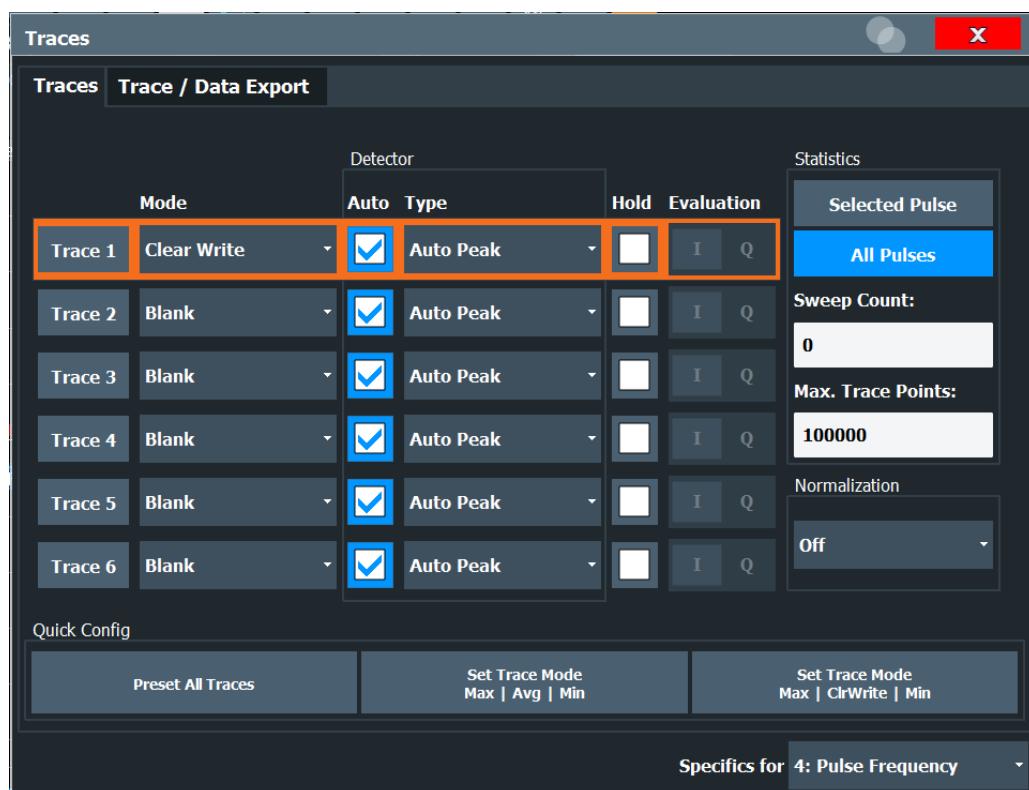

For details on trace evaluation see [Chapter 4.5, "Trace evaluation"](#), on page 50.

Trace data can also be exported to an ASCII file for further analysis. For details see [Chapter 6.5, "Trace / data export configuration"](#), on page 113.

You can configure up to 6 individual traces for the following result displays (see [Chapter 6.1.2, "Result range"](#), on page 88):

- ["Pulse Frequency"](#) on page 34
- ["Pulse Magnitude"](#) on page 35
- ["Pulse Phase"](#) on page 36
- ["Pulse Phase \(Wrapped\)"](#) on page 36

Trace 1/Trace 2/Trace 3/Trace 4/Trace 5/Trace 6	110
Trace Mode	110
Detector	111
Hold	111
Evaluation	111
Statistical Evaluation	112
└ Selected Pulse vs All Pulses	112
└ Sweep/Average Count	112
└ Maximum number of trace points	112
Normalization	112
Predefined Trace Settings - Quick Config	113
Trace 1/ Trace 2/ Trace 3/ Trace 4 (Softkeys)	113

Trace 1/Trace 2/Trace 3/Trace 4/Trace 5/Trace 6

Selects the corresponding trace for configuration. The currently selected trace is highlighted orange.

For the Magnitude Capture result display, only one trace is available, which cannot be configured.

Remote command:

`DISPlay[:WINDOW<n>] [:SUBWindow<w>]:TRACe<t>[:STATe]` on page 246

Selected via numeric suffix of `TRACe<t>` commands

Trace Mode

Defines the update mode for subsequent traces.

"Clear/ Write"	Overwrite mode (default): the trace is overwritten by each measurement.
"Max Hold"	The maximum value is determined over several measurements and displayed. The R&S FSMR3 saves each trace point in the trace memory only if the new value is greater than the previous one.
"Min Hold"	The minimum value is determined from several measurements and displayed. The R&S FSMR3 saves each trace point in the trace memory only if the new value is lower than the previous one.
"Average"	The average is formed over several measurements.
"View"	The current contents of the trace memory are frozen and displayed.
"Blank"	Removes the selected trace from the display.

Remote command:

[DISPlay\[:WINDOW<n>\] \[:SUBWindow<w>\]:TRACe<t>:MODE](#) on page 244

Detector

Defines the trace detector to be used for trace analysis.

"Auto"	(default:) Selects the optimum detector for the selected trace and filter mode
"Type"	Defines the selected detector type.

Remote command:

[\[SENSe:\] \[WINDOW<n>\]:DETector<t>\[:FUNCTION\]](#) on page 247

[\[SENSe:\] \[WINDOW<n>\]:DETector<t>\[:FUNCTION\]:AUTO](#) on page 247

Hold

If activated, traces in "Min Hold", "Max Hold" and "Average" mode are not reset after specific parameter changes have been made.

Normally, the measurement is started again after parameter changes, before the measurement results are analyzed (e.g. using a marker). In all cases that require a new measurement after parameter changes, the trace is reset automatically to avoid false results (e.g. with span changes). For applications that require no reset after parameter changes, the automatic reset can be switched off.

The default setting is off.

Remote command:

[DISPlay\[:WINDOW<n>\] \[:SUBWindow<w>\]:TRACe<t>:MODE:HCONTinuous](#)

on page 245

Evaluation

Defines which signal component (I/Q) is evaluated in which trace for the [Pulse I and Q](#) result display. This setting is not available for any other result displays. By default, the I component is displayed by trace 1, while the Q component is displayed by trace 4.

Remote command:

[CALCulate<n>:TRACe<t>\[:VALue\]](#) on page 326

Statistical Evaluation

If the trace modes "Average", "Max Hold" or "Min Hold" are set, you can define how many pulses, measurements and measurement samples are included in the statistical evaluation.

For details see [Chapter 4.5.1, "Trace statistics"](#), on page 51.

Selected Pulse vs All Pulses ← Statistical Evaluation

Defines which pulses are included in the statistical evaluation.

- | | |
|------------------|--|
| "Selected pulse" | Only the selected pulse from each measurement is included in the statistical evaluation. |
| "All Pulses" | All measured pulses from each measurement are included in the statistical evaluation. |

Remote command:

[SENSe:] STATistic<n>:TYPE on page 248

Sweep/Average Count ← Statistical Evaluation

Defines the number of measurements to be performed in the single sweep mode.

Maximum number of trace points ← Statistical Evaluation

If the number of samples within the result range (see [Chapter 6.1.2, "Result range"](#), on page 88) is larger than this value, the trace data is reduced to the defined maximum number of trace points using the selected detector.

Restricting this value can improve performance during statistical evaluation of large result range lengths.

Remote command:

[SENSe:] SWEEp:POINTs on page 248

Normalization

Enables or disables normalization of the trace in reference to the measured pulse or a reference pulse. For details see [Chapter 4.5.2, "Normalizing traces"](#), on page 51.

- | | |
|-------------------|---|
| "Off" | Traces are not normalized |
| "Measured Pulse" | The value in the measurement point (that is: the value in the "Pulse Results" table) for each pulse in phase, amplitude or frequency is subtracted from the respective trace to normalize each trace to 0. An additional phase offset may be defined, see " Phase Normalization " on page 102. |
| "Reference Pulse" | The value in the measurement point (that is: the value in the "Pulse Results" table) for the <i>Reference Pulse</i> is subtracted from the respective trace to normalize the traces.
The reference pulse is defined in the "Measurement Point" settings, see " Reference for Pulse-Pulse Measurements " on page 83.
An additional phase offset may be defined, see " Phase Normalization " on page 102. |

Remote command:

DISPLAY[:WINDOW<n>]:TRACE<t>:NORMALize:MODE on page 245

Predefined Trace Settings - Quick Config

Commonly required trace settings have been predefined and can be applied very quickly by selecting the appropriate button.

Function	Trace Settings	
Preset All Traces	Trace 1:	Clear Write
		Blank
Set Trace Mode Max Avg Min	Trace 1:	Max Hold
	Trace 2:	Average
	Trace 3:	Min Hold
		Blank
Set Trace Mode Max ClrWrite Min	Trace 1:	Max Hold
	Trace 2:	Clear Write
	Trace 3:	Min Hold
		Blank

Trace 1/ Trace 2/ Trace 3/ Trace 4 (Softkeys)

Displays the "Traces" settings and focuses the "Mode" list for the selected trace.

Remote command:

`DISPlay[:WINDOW<n>] [:SUBWindow<w>]:TRACe<t>[:STATE]` on page 246

6.5 Trace / data export configuration

Access: "Save" > "Export" > "Export Configuration"

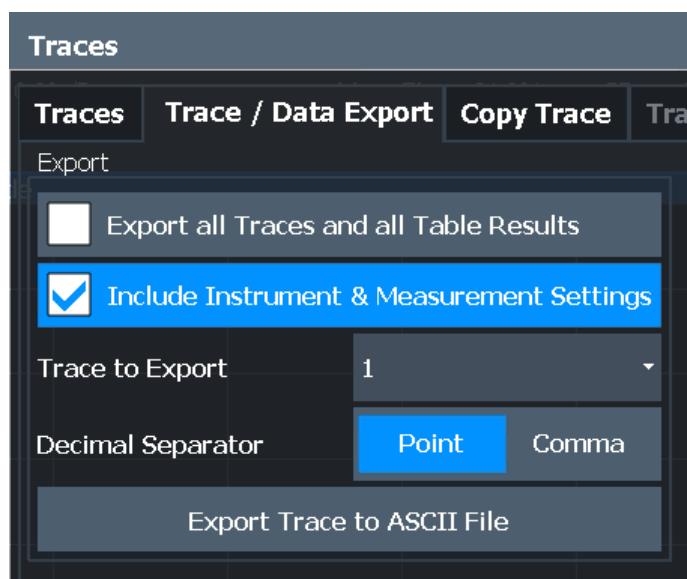

Or: [TRACE] > "Trace Config" > "Trace / Data Export"

The R&S FSMR3 provides various evaluation methods for the results of the performed measurements. However, if you want to evaluate the data with other, external applications, you can export the measurement data to an ASCII file.

The standard data management functions (e.g. saving or loading instrument settings) that are available for all R&S FSMR3 applications are not described here.

See the R&S FSMR3000 base unit user manual for a description of the standard functions.

Export all Traces and all Table Results	114
Include Instrument & Measurement Settings	114
Trace to Export	114
Decimal Separator	114
Export Trace to ASCII File	115

Export all Traces and all Table Results

Selects all displayed traces and result tables (e.g. "Result Summary", marker table etc.) in the current application for export to an ASCII file.

Alternatively, you can select one specific trace only for export (see [Trace to Export](#)).

The results are output in the same order as they are displayed on the screen: window by window, trace by trace, and table row by table row.

Remote command:

[FORMAT:DEXPORT:TRACEs](#) on page 323

Include Instrument & Measurement Settings

Includes additional instrument and measurement settings in the header of the export file for result data.

Remote command:

[FORMAT:DEXPORT:HEADer](#) on page 322

Trace to Export

Defines an individual trace to be exported to a file.

This setting is not available if [Export all Traces and all Table Results](#) is selected.

Decimal Separator

Defines the decimal separator for floating-point numerals for the data export/import files. Evaluation programs require different separators in different languages.

Remote command:

[FORMAT:DEXPORT:DSEParator](#) on page 322

Export Trace to ASCII File

Opens a file selection dialog box and saves the selected trace in ASCII format (.dat) to the specified file and directory.

The results are output in the same order as they are displayed on the screen: window by window, trace by trace, and table row by table row.

Remote command:

[MMEMory:STORe<n>:TRACe](#) on page 263

6.6 Export functions

Access: "Save" > "Export"

The standard data management functions (e.g. saving or loading instrument settings) that are available for all R&S FSMR3 applications are not described here.

See the R&S FSMR3 User Manual for a description of the standard functions.

Export table to ASCII File	115
Table Export Configuration	116
└ Columns to Export	116
└ Export Limits	116
└ Decimal Separator	116
└ Export table to ASCII File	116
Absolute Time Stamp	117
Export Trace to ASCII File	117
Trace Export Configuration	117

Export table to ASCII File

Opens a file selection dialog box and saves the selected result table in ASCII format (.DAT) to the specified file and directory.

For details on the file format, see [Chapter A, "Reference: ASCII file export format"](#), on page 335.

Note: To store the measurement results for **all** traces and tables in **all** windows, use the [Export Trace to ASCII File](#) command in the "Save/Recall" > "Export" menu.
(See also [Chapter 6.5, "Trace / data export configuration"](#), on page 113.)

Note: Secure user mode.

In secure user mode, settings that are stored on the instrument are stored to volatile memory, which is restricted to 256 MB. Thus, a "memory limit reached" error can occur although the hard disk indicates that storage space is still available.

To store data permanently, select an external storage location such as a USB memory device.

For details, see "Protecting Data Using the Secure User Mode" in the "Data Management" section of the R&S FSMR3000 base unit user manual.

Remote command:

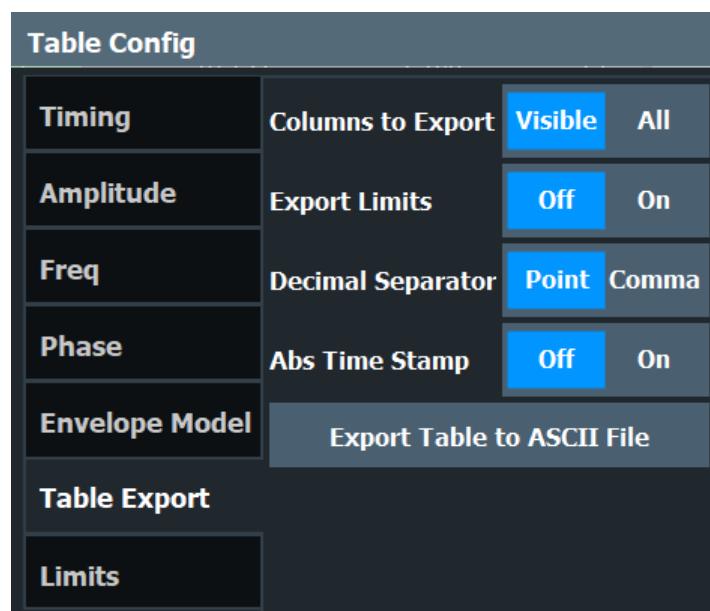

[MMEMory:STORe<n>:TABLE](#) on page 323

Table Export Configuration

Access: "Overview" > "Result Config" > "Table Config" tab > "Table Export" tab

Or: "Save/Recall" > "Export"

The settings are window-specific and only available for result tables.

**Columns to Export ← Table Export Configuration**

Defines which of the result table columns are to be included in the export file.

"Visible" Only the currently visible columns in the result display are exported.

"All" All columns, including currently hidden ones, for the result display are exported.

Remote command:

[MMEMory:STORe<n>:TABLE](#) on page 323

Export Limits ← Table Export Configuration

If activated, any limits defined for the table will be included in the export file.

Remote command:

[MMEMory:STORe<n>:TABLE:LIMIT](#) on page 324

Decimal Separator ← Table Export Configuration

Defines the decimal separator for floating-point numerals for the data export/import files. Evaluation programs require different separators in different languages.

Remote command:

[FORMAT:DEXPort:DSEParator](#) on page 322

Export table to ASCII File ← Table Export Configuration

Opens a file selection dialog box and saves the selected result table in ASCII format (.DAT) to the specified file and directory.

For details on the file format, see [Chapter A, "Reference: ASCII file export format"](#), on page 335.

Note: To store the measurement results for **all** traces and tables in **all** windows, use the [Export Trace to ASCII File](#) command in the "Save/Recall" > "Export" menu. (See also [Chapter 6.5, "Trace / data export configuration", on page 113](#).)

Note: Secure user mode.

In secure user mode, settings that are stored on the instrument are stored to volatile memory, which is restricted to 256 MB. Thus, a "memory limit reached" error can occur although the hard disk indicates that storage space is still available.

To store data permanently, select an external storage location such as a USB memory device.

For details, see "Protecting Data Using the Secure User Mode" in the "Data Management" section of the R&S FSMR3000 base unit user manual.

Remote command:

[MMEMory:STORe<n>:TABLE](#) on page 323

Absolute Time Stamp

If the function is enabled, it prints the absolute time stamp for the pulse in the first position before the rest of the ASCII table export.

In addition to the current capture part, absolute time stamp also works for the cumulative part of the table.

Remote command:

[FORMAT:DEXPort:TStamp](#) on page 323

Export Trace to ASCII File

Opens a file selection dialog box and saves the selected trace in ASCII format (**.dat**) to the specified file and directory.

The results are output in the same order as they are displayed on the screen: window by window, trace by trace, and table row by table row.

Remote command:

[MMEMory:STORe<n>:TRACe](#) on page 263

Trace Export Configuration

Opens the "Traces" dialog box to configure the trace and data export settings. See [Chapter 6.5, "Trace / data export configuration", on page 113](#).

7 Export functions

Access: "Save" > "Export"

The standard data management functions (e.g. saving or loading instrument settings) that are available for all R&S FSMR3 applications are not described here.

See the R&S FSMR3 User Manual for a description of the standard functions.

Export table to ASCII File.....	118
Table Export Configuration.....	118
└ Columns to Export.....	119
└ Export Limits.....	119
└ Decimal Separator.....	119
└ Export table to ASCII File.....	119
Absolute Time Stamp.....	120
Export Trace to ASCII File.....	120
Trace Export Configuration.....	120

Export table to ASCII File

Opens a file selection dialog box and saves the selected result table in ASCII format (.DAT) to the specified file and directory.

For details on the file format, see [Chapter A, "Reference: ASCII file export format", on page 335](#).

Note: To store the measurement results for **all** traces and tables in **all** windows, use the [Export Trace to ASCII File](#) command in the "Save/Recall" > "Export" menu. (See also [Chapter 6.5, "Trace / data export configuration", on page 113](#).)

Note: Secure user mode.

In secure user mode, settings that are stored on the instrument are stored to volatile memory, which is restricted to 256 MB. Thus, a "memory limit reached" error can occur although the hard disk indicates that storage space is still available.

To store data permanently, select an external storage location such as a USB memory device.

For details, see "Protecting Data Using the Secure User Mode" in the "Data Management" section of the R&S FSMR3000 base unit user manual.

Remote command:

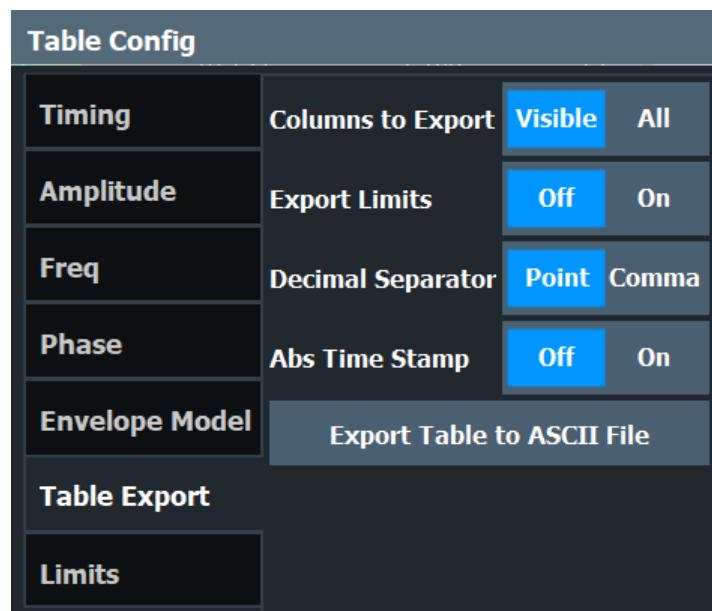

[MMEMory:STORe<n>:TABLE](#) on page 323

Table Export Configuration

Access: "Overview" > "Result Config" > "Table Config" tab > "Table Export" tab

Or: "Save/Recall" > "Export"

The settings are window-specific and only available for result tables.

Columns to Export ← Table Export Configuration

Defines which of the result table columns are to be included in the export file.

- "Visible" Only the currently visible columns in the result display are exported.
- "All" All columns, including currently hidden ones, for the result display are exported.

Remote command:

[MMEMory:STORe<n>:TABLE](#) on page 323

Export Limits ← Table Export Configuration

If activated, any limits defined for the table will be included in the export file.

Remote command:

[MMEMory:STORe<n>:TABLE:LIMIT](#) on page 324

Decimal Separator ← Table Export Configuration

Defines the decimal separator for floating-point numerals for the data export/import files. Evaluation programs require different separators in different languages.

Remote command:

[FORMAT:DEXPort:DSEParator](#) on page 322

Export table to ASCII File ← Table Export Configuration

Opens a file selection dialog box and saves the selected result table in ASCII format (.DAT) to the specified file and directory.

For details on the file format, see [Chapter A, "Reference: ASCII file export format"](#), on page 335.

Note: To store the measurement results for **all** traces and tables in **all** windows, use the [Export Trace to ASCII File](#) command in the "Save/Recall" > "Export" menu. (See also [Chapter 6.5, "Trace / data export configuration", on page 113](#).)

Note: Secure user mode.

In secure user mode, settings that are stored on the instrument are stored to volatile memory, which is restricted to 256 MB. Thus, a "memory limit reached" error can occur although the hard disk indicates that storage space is still available.

To store data permanently, select an external storage location such as a USB memory device.

For details, see "Protecting Data Using the Secure User Mode" in the "Data Management" section of the R&S FSMR3000 base unit user manual.

Remote command:

[MMEMory:STORe<n>:TABLE](#) on page 323

Absolute Time Stamp

If the function is enabled, it prints the absolute time stamp for the pulse in the first position before the rest of the ASCII table export.

In addition to the current capture part, absolute time stamp also works for the cumulative part of the table.

Remote command:

[FORMat:DEXPort:TStamp](#) on page 323

Export Trace to ASCII File

Opens a file selection dialog box and saves the selected trace in ASCII format (.dat) to the specified file and directory.

The results are output in the same order as they are displayed on the screen: window by window, trace by trace, and table row by table row.

Remote command:

[MMEMory:STORe<n>:TRACe](#) on page 263

Trace Export Configuration

Opens the "Traces" dialog box to configure the trace and data export settings. See [Chapter 6.5, "Trace / data export configuration", on page 113](#).

8 How to perform measurements in the pulse application

The following step-by-step instructions demonstrate how to perform a Pulse measurement with the R&S FSMR3-K6 option.

- [How to perform a standard pulse measurement](#).....121
- [How to configure a limit check for a pulse measurement](#).....122
- [How to export table data](#).....123

8.1 How to perform a standard pulse measurement

To perform a standard pulse measurement

1. Press the [MODE] key on the front panel and select the "Pulse" application.
2. Select the "Overview" softkey to display the "Overview" for a Pulse measurement.
3. Select the "Signal Description" button and configure the expected pulse characteristics.
4. Select the "Input/Frontend" button to define the input signal's center frequency, amplitude and other basic settings.
5. Optionally, select the "Trigger" button and define a trigger for data acquisition, for example an external trigger to start capturing data only when a useful signal is transmitted.
6. Select the "Data Acquisition" button and define the bandwidth parameters for the input signal:
 - "Measurement Bandwidth": the amount of signal bandwidth to capture
 - "Measurement Time": how long the input signal is captured
7. Select the "Pulse Detection" button and define the criteria to detect the individual pulses within the input signal.
8. Select the "Measurement" button and define the general measurement settings concerning:
 - The measurement levels
 - The measurement point
 - The measurement range
9. Select the "Display" button and select the evaluation methods that are of interest to you.
Arrange them on the display to suit your preferences.
10. Exit the SmartGrid mode and select the "Overview" softkey to display the "Overview" again.

11. Select the "Result Config" button in the "Overview" to configure which data is displayed in the individual result displays, and other settings for specific evaluation methods. These settings are window-specific, so select the window before you configure the settings.
 - Define the "Result Range", which determines the extent of measured data displayed in "pulse magnitude", frequency and phase vs time traces.
 - Configure specific settings for the selected evaluation methods.
 - Configure a limit check (see "[To configure a limit check for a pulse measurement](#)" on page 122).
 - Configure markers and delta markers to determine deviations and offsets within the results, e.g. when comparing errors or peaks.
 - Adapt the diagram scaling to the displayed data.
 - Optionally, configure the trace to display the average over a series of sweeps. If necessary, increase the "Sweep/Average Count" in the "Sweep Config" dialog box.
12. Stop the continuous sweep and start a new sweep with the new configuration (e.g. using the [RUN SINGLE] key).
13. Press the "Selected Pulse" softkey and select a specific pulse to be evaluated.

The result displays are updated to show the results for the selected pulse.

8.2 How to configure a limit check for a pulse measurement

To configure a limit check for a pulse measurement

Measurement results can be checked against defined limits and the results of the limit check can then be indicated in the Result Table. This procedure assumes a standard pulse measurement has been defined (as described in "[To perform a standard pulse measurement](#)" on page 121) and a Result Table display is active.

1. Select the "Result Config" button in the "Overview".
2. If necessary, select the Result Table from the "Specifics for" list of windows.
3. Switch to the "Table Config" tab, then select the "Limits" tab.
4. Select the parameter for which you want to perform a limit check.
For details on available parameters and parameter groups, see [Chapter 3.1, "Pulse parameters"](#), on page 15.
5. Toggle the "Limit On/Off" setting to "On".
6. Define the lower or upper limit value, or both.

7. Repeat [step 4](#) to [step 6](#) for each parameter you want to perform a limit check on.

The measured values and all newly measured values for the specified parameter are compared to the defined limit values.

If the measured value remains above the lower limit and below the upper limit, it is displayed in green in the Result Table.

If the measured value exceeds either limit value, it is displayed in red in the Result Table.

Changing the limit values graphically

Limit lines can also be displayed in "Parameter Trend" or "Parameter Distribution" result displays ("Result Config" > "Parameter" tab > "Display Limit Lines").

You can drag these limit lines to a new position in the window. The new position is maintained, the limit check is repeated, and the results of the limit check in any active table displays are adapted.

To deactivate a limit check

1. Select the "Result Config" button in the "Overview".
2. If necessary, select the Result Table from the "Specifics for" list of windows.
3. Switch to the "Table Config" tab, then select the "Limits" tab.
4.
 - To deactivate the limit check for a single parameter, select the parameter and toggle the "Limit On/Off" setting to "Off".
 - To deactivate the limit check for an entire parameter group, select "Turn off all limits in group".
 - To deactivate the limit check for all parameters in all parameter groups, select "Turn off limits".

8.3 How to export table data

The measured result table data can be exported to an ASCII file. For each parameter, the measured values are output.

For details on the storage format, see [Chapter A, "Reference: ASCII file export format"](#), on page 335.

Table data can be exported either from the "Result Configuration" dialog box, or from the "Save/Recall" menu.

To export from the "Save/Recall" menu

1. Select an active result table whose data you want to export.
2. Select the "Save" icon in the toolbar.
3. Select the "Export" softkey.
4. If necessary, change the decimal separator used in the ASCII export file.

5. Select the "ASCII Table Export" softkey.
6. In the file selection dialog box, select the storage location and file name for the export file.
7. Select "Save" to close the dialog box and export the table data to the file.

To export from the "Result configuration" dialog box

1. Press the "Overview" softkey.
2. Select the "Result Config" button.
3. Select the window that contains the result table in the "Specifics for" selection box.
4. Select the "Table Config" tab.
5. Select the vertical "Table Export" tab.
6. Select whether you want to export all columns or only the currently visible columns of the table.
7. If necessary, change the decimal separator used in the ASCII export file.
8. Select the "Export Table to ASCII File" button.
9. In the file selection dialog box, select the storage location and file name for the export file.
10. Select "Save" to close the dialog box and export the table data to the file.

9 Remote commands for pulse measurements

The following commands are required to perform measurements in the Pulse application in a remote environment. The R&S FSMR3 must already be set up for remote operation in a network as described in the base unit manual.

Note that basic tasks that are also performed in the base unit in the same way are not described here. For a description of such tasks, see the R&S FSMR3 User Manual.

In particular, this includes:

- Managing Settings and Results, i.e. storing and loading settings and result data
- Basic instrument configuration, e.g. checking the system configuration, customizing the screen layout, or configuring networks and remote operation
- Using the common status registers (specific status registers for Pulse measurements are not used)

After a short introduction, the tasks specific to the Pulse application are described here:

● Introduction	125
● Common suffixes	130
● Activating pulse measurements	131
● Signal description	134
● Input/output settings	137
● Frontend configuration	141
● Triggering measurements	146
● Data acquisition	153
● Pulse detection	156
● Configuring the pulse measurement	159
● Configuring and performing sweeps	165
● Configuring the results	170
● Configuring the result display	235
● Configuring standard traces	243
● Working with markers	248
● Retrieving results	260
● Retrieving marker results	325
● Deprecated commands	326
● Programming example: pulse measurement	327

9.1 Introduction

Commands are program messages that a controller (e.g. a PC) sends to the instrument or software. They operate its functions ('setting commands' or 'events') and request information ('query commands'). Some commands can only be used in one

way, others work in two ways (setting and query). If not indicated otherwise, the commands can be used for settings and queries.

The syntax of a SCPI command consists of a header and, usually, one or more parameters. To use a command as a query, you have to append a question mark after the last header element, even if the command contains a parameter.

A header contains one or more keywords, separated by a colon. Header and parameters are separated by a "white space" (ASCII code 0 to 9, 11 to 32 decimal, e.g. blank). If there is more than one parameter for a command, they are separated by a comma from one another.

Only the most important characteristics that you need to know when working with SCPI commands are described here. For a more complete description, refer to the user manual of the R&S FSMR3.

Remote command examples

Note that some remote command examples mentioned in this general introduction are possibly not supported by this particular application.

9.1.1 Conventions used in descriptions

The following conventions are used in the remote command descriptions:

- **Command usage**

If not specified otherwise, commands can be used both for setting and for querying parameters.

If a command can be used for setting or querying only, or if it initiates an event, the usage is stated explicitly.

- **Parameter usage**

If not specified otherwise, a parameter can be used to set a value and it is the result of a query.

Parameters required only for setting are indicated as **Setting parameters**.

Parameters required only to refine a query are indicated as **Query parameters**.

Parameters that are only returned as the result of a query are indicated as **Return values**.

- **Conformity**

Commands that are taken from the SCPI standard are indicated as **SCPI confirmed**. All commands used by the R&S FSMR3 follow the SCPI syntax rules.

- **Asynchronous commands**

A command which does not automatically finish executing before the next command starts executing (overlapping command) is indicated as an **Asynchronous command**.

- **Reset values (*RST)**

Default parameter values that are used directly after resetting the instrument (*RST command) are indicated as ***RST values**, if available.

- **Default unit**

The default unit is used for numeric values if no other unit is provided with the parameter.

- **Manual operation**

If the result of a remote command can also be achieved in manual operation, a link to the description is inserted.

9.1.2 Long and short form

The keywords have a long and a short form. You can use either the long or the short form, but no other abbreviations of the keywords.

The short form is emphasized in uppercase letters. Note however, that this emphasis only serves the purpose to distinguish the short from the long form in the manual. For the instrument, the case does not matter.

Example:

`SENSe:FREQuency:CENTER` is the same as `SENS:FREQ:CENT`.

9.1.3 Numeric suffixes

Some keywords have a numeric suffix if the command can be applied to multiple instances of an object. In that case, the suffix selects a particular instance (e.g. a measurement window).

Numeric suffixes are indicated by angular brackets (`<n>`) next to the keyword.

If you do not quote a suffix for keywords that support one, a 1 is assumed.

Example:

`DISPlay[:WINDOW<1...4>]:ZOOM:STATE` enables the zoom in a particular measurement window, selected by the suffix at `WINDOW`.

`DISPlay:WINDOW4:ZOOM:STATE ON` refers to window 4.

9.1.4 Optional keywords

Some keywords are optional and are only part of the syntax because of SCPI compliance. You can include them in the header or not.

If an optional keyword has a numeric suffix and you need to use the suffix, you have to include the optional keyword. Otherwise, the suffix of the missing keyword is assumed to be the value 1.

Optional keywords are emphasized with square brackets.

Example:

Without a numeric suffix in the optional keyword:

[SENSe:] FREQuency:CENTER is the same as FREQuency:CENTER

With a numeric suffix in the optional keyword:

DISPlay[:WINDOW<1...4>]:ZOOM:STATE

DISPlay:ZOOM:STATE ON enables the zoom in window 1 (no suffix).

DISPlay:WINDOW4:ZOOM:STATE ON enables the zoom in window 4.

9.1.5 Alternative keywords

A vertical stroke indicates alternatives for a specific keyword. You can use both keywords to the same effect.

Example:

[SENSe:] BANDwidth|BWIDth[:RESolution]

In the short form without optional keywords, BAND 1MHZ would have the same effect as BWID 1MHZ.

9.1.6 SCPI parameters

Many commands feature one or more parameters.

If a command supports more than one parameter, they are separated by a comma.

Example:

LAYOUT:ADD:WINDOW Spectrum,LEFT,MTABLE

Parameters can have different forms of values.

- [Numeric values](#)..... 128
- [Boolean](#)..... 129
- [Character data](#)..... 130
- [Character strings](#)..... 130
- [Block data](#)..... 130

9.1.6.1 Numeric values

Numeric values can be entered in any form, i.e. with sign, decimal point or exponent. For physical quantities, you can also add the unit. If the unit is missing, the command uses the basic unit.

Example:

With unit: SENSe:FREQuency:CENTER 1GHZ

Without unit: SENSe:FREQuency:CENTER 1E9 would also set a frequency of 1 GHz.

Values exceeding the resolution of the instrument are rounded up or down.

If the number you have entered is not supported (e.g. for discrete steps), the command returns an error.

Instead of a number, you can also set numeric values with a text parameter in special cases.

- MIN/MAX
Defines the minimum or maximum numeric value that is supported.
- DEF
Defines the default value.
- UP/DOWN
Increases or decreases the numeric value by one step. The step size depends on the setting. Sometimes, you can customize the step size with a corresponding command.

Querying numeric values

When you query numeric values, the system returns a number. For physical quantities, it applies the basic unit (e.g. Hz for frequencies). The number of digits after the decimal point depends on the type of numeric value.

Example:

Setting: SENSE:FREQuency:CENTER 1GHZ

Query: SENSE:FREQuency:CENTER? would return 1E9

Sometimes, numeric values are returned as text.

- INF/NINF
Infinity or negative infinity. Represents the numeric values 9.9E37 or -9.9E37.
- NAN
Not a number. Represents the numeric value 9.91E37. NAN is returned if errors occur.

9.1.6.2 Boolean

Boolean parameters represent two states. The "on" state (logically true) is represented by "ON" or the numeric value 1. The "off" state (logically untrue) is represented by "OFF" or the numeric value 0.

Querying Boolean parameters

When you query Boolean parameters, the system returns either the value 1 ("ON") or the value 0 ("OFF").

Example:

Setting: DISPLAY:WINDOW:ZOOM:STATE ON

Query: DISPLAY:WINDOW:ZOOM:STATE? would return 1

9.1.6.3 Character data

Character data follows the syntactic rules of keywords. You can enter text using a short or a long form. For more information, see [Chapter 9.1.2, "Long and short form", on page 127](#).

Querying text parameters

When you query text parameters, the system returns its short form.

Example:

Setting: SENSE:BANDwidth:RESolution:TYPE NORMAL

Query: SENSE:BANDwidth:RESolution:TYPE? would return NORM

9.1.6.4 Character strings

Strings are alphanumeric characters. They have to be in straight quotation marks. You can use a single quotation mark (') or a double quotation mark (").

Example:

INSTRument:DElete 'Spectrum'

9.1.6.5 Block data

Block data is a format which is suitable for the transmission of large amounts of data.

The ASCII character # introduces the data block. The next number indicates how many of the following digits describe the length of the data block. The data bytes follow. During the transmission of these data bytes, all end or other control signs are ignored until all bytes are transmitted. #0 specifies a data block of indefinite length. The use of the indefinite format requires an NL^END message to terminate the data block. This format is useful when the length of the transmission is not known or if speed or other considerations prevent segmentation of the data into blocks of definite length.

9.2 Common suffixes

In the R&S FSMR3000 Pulse application, the following common suffixes are used in remote commands:

Table 9-1: Common suffixes used in remote commands in the R&S FSMR3000 Pulse application

Suffix	Value range	Description
<m>	1 to 4	Marker
<n>	1 to 6	Window (in the currently selected channel)

Suffix	Value range	Description
<t>	1	Trace
	1 to 8	Limit line

9.3 Activating pulse measurements

Pulse measurements require a special application on the R&S FSMR3. The measurement is started immediately with the default settings.

INSTrument:CREate:DUPlIcate.....	131
INSTrument:CREate[:NEW].....	131
INSTrument:CREate:REPLace.....	132
INSTrument:DElete.....	132
INSTrument:LIST?.....	132
INSTrument:REName.....	133
INSTrument[:SElect].....	134
SYSTem:PRESet:CHANnel[:EXEC].....	134

INSTrument:CREate:DUPlIcate

This command duplicates the currently selected channel, i.e creates a new channel of the same type and with the identical measurement settings. The name of the new channel is the same as the copied channel, extended by a consecutive number (e.g. "IQAnalyzer" -> "IQAnalyzer 2").

The channel to be duplicated must be selected first using the INST:SEL command.

Example: INST:SEL 'Measuring Receiver'
 INST:CRE:DUP
 Duplicates the channel named 'Measuring Receiver' and creates a new channel named 'Measuring Receiver 2'.

Usage: Event

INSTrument:CREate[:NEW] <ChannelType>, <ChannelName>

This command adds a measurement channel. You can configure up to 10 measurement channels at the same time (depending on available memory).

Parameters:

<ChannelType> Channel type of the new channel.
 For a list of available channel types, see [INSTrument:LIST?](#) on page 132.

<ChannelName> String containing the name of the channel.
 Note that you cannot assign an existing channel name to a new channel. If you do, an error occurs.

Example:

INST:CRE SAN, 'Spectrum 2'
 Adds a spectrum display named "Spectrum 2".

INSTRument:CREate:REPLace <ChannelName1>,<ChannelType>,<ChannelName2>

This command replaces a channel with another one.

Setting parameters:

<ChannelName1> String containing the name of the channel you want to replace.

<ChannelType> Channel type of the new channel.
For a list of available channel types, see [INSTRument:LIST?](#) on page 132.

<ChannelName2> String containing the name of the new channel.
Note: If the specified name for a new channel already exists, the default name, extended by a sequential number, is used for the new channel (see [INSTRument:LIST?](#) on page 132).
Channel names can have a maximum of 31 characters, and must be compatible with the Windows conventions for file names. In particular, they must not contain special characters such as ":", "*", "?".

Example:

```
INST:CRE:REPL 'Measuring Receiver  
2',MREC,'Measuring Receiver 3'  
Replaces the channel named "Measuring Receiver 2" by a new  
channel of type "Measuring Receiver" named "Measuring  
Receiver 3".
```

Usage:

Setting only

INSTRument:DELete <ChannelName>

This command deletes a channel.

If you delete the last channel, the default Measuring Receiver channel is activated.

Setting parameters:

<ChannelName> String containing the name of the channel you want to delete.
A channel must exist to delete it.

Example:

```
INST:DEL 'Measuring Receiver 2'  
Deletes the channel with the name 'Measuring Receiver 2'.
```

Usage:

Setting only

INSTRument:LIST?

This command queries all active channels. The query is useful to obtain the names of the existing channels, which are required to replace or delete the channels.

Return values:

<ChannelType>,
<ChannelName> For each channel, the command returns the channel type and
channel name (see tables below).
Tip: to change the channel name, use the [INSTRument:
RENAmE](#) command.

Example: INST:LIST?
Result for 2 channels:
'MREC', 'Measuring Receiver', 'MREC', 'Measuring
Receiver 2'

Usage: Query only

Table 9-2: Available channel types and default channel names

Application	<ChannelType> Parameter	Default Channel Name*
Measuring Receiver	MRECeiver	Measuring Receiver
Spectrum (R&S FSMR3-B1)	SANalyzer	Spectrum
I/Q Analyzer (R&S FSMR3-B1)	IQ	IQ Analyzer
Phase Noise (R&S FSMR3-B60)	PNOise	Phase Noise
Pulse (R&S FSMR3-K6)	PULSE	Pulse
Avionics (R&S FSMR3-K15)	AVIonics	Avionics
Vector Signal Analysis (VSA, R&S FSMR3-K70)	DDEM	VSA

Note: the default channel name is also listed in the table. If the specified name for a new channel already exists, the default name, extended by a sequential number, is used for the new channel.

INSTrument:REName <ChannelName1>, <ChannelName2>

This command renames a channel.

Setting parameters:

<ChannelName1> String containing the name of the channel you want to rename.

<ChannelName2> String containing the new channel name.
Note that you cannot assign an existing channel name to a new channel. If you do, an error occurs.
Channel names can have a maximum of 31 characters, and must be compatible with the Windows conventions for file names. In particular, they must not contain special characters such as ".", "*", "?".

Example: INST:REN 'Measuring Receiver 2', 'Measuring
Receiver 3'
Renames the channel with the name 'Measuring Receiver 2' to 'Measuring Receiver 3'.

Usage: Setting only

INSTRument[:SELect] <ChannelType>

This command activates a new measurement channel with the defined channel type, or selects an existing measurement channel with the specified name.

See also [INSTRument:CREate \[:NEW\]](#) on page 131.

Parameters:

<ChannelType>	PULSe
	Pulse option, R&S FSMR3-K6

SYSTem:PRESet:CHANnel[:EXEC]

This command restores the default instrument settings in the current channel.

Use `INST:SEL` to select the channel.

Example:

```
INST:SEL 'Spectrum2'
Selects the channel for "Spectrum2".
SYST:PRES:CHAN:EXEC
Restores the factory default settings to the "Spectrum2"channel.
```

Usage:

Event

Manual operation:

See "[Preset Channel](#)" on page 57

9.4 Signal description

The signal description provides information on the expected input signal, which optimizes pulse detection.

[SENSe:]TRACe:MEASurement:DEFine:DURation:AUTO.....	134
[SENSe:]TRACe:MEASurement:DEFine:DURation:MAX.....	135
[SENSe:]TRACe:MEASurement:DEFine:DURation:MIN.....	135
[SENSe:]TRACe:MEASurement:DEFine:DURation:OFF.....	135
[SENSe:]TRACe:MEASurement:DEFine:FREQuency:OFFSet.....	135
[SENSe:]TRACe:MEASurement:DEFine:FREQuency:OFFSet:AUTO.....	136
[SENSe:]TRACe:MEASurement:DEFine:FREQuency:RATE.....	136
[SENSe:]TRACe:MEASurement:DEFine:FREQuency:RATE:AUTO.....	136
[SENSe:]TRACe:MEASurement:DEFine:PULSe:ADRoop.....	136
[SENSe:]TRACe:MEASurement:DEFine:PULSe:MODulation.....	136
[SENSe:]TRACe:MEASurement:DEFine:PULSe:PERiod.....	137

[SENSe:]TRACe:MEASurement:DEFine:DURation:AUTO <State>

If this flag is set to ON, the pulse timing parameters (min/max width, min off time) are determined automatically from the current capture settings.

Parameters:

<State>	ON OFF 0 1
*RST:	1

Manual operation: See "[Timing Auto Mode](#)" on page 59

[SENSe:]TRACe:MEASurement:DEFine:DURation:MAX <PulseMaxWidth>

Defines a maximum pulse width; pulses outside this range are not detected. The available value range may be restricted by the sample rate.

Parameters:

<PulseMaxWidth> Range: 50ns to 100s
 *RST: 5 ms
 Default unit: S

Manual operation: See "[Maximum Pulse Width](#)" on page 59

[SENSe:]TRACe:MEASurement:DEFine:DURation:MIN <PulseMinWidth>

Defines a minimum pulse width; pulses outside this range are not detected. The available value range may be restricted by the sample rate.

Parameters:

<PulseMinWidth> Range: 50ns to 100s
 *RST: 50 ns
 Default unit: S

Manual operation: See "[Minimum Pulse Width](#)" on page 59

[SENSe:]TRACe:MEASurement:DEFine:DURation:OFF <PulseMinOff>

The minimum time the pulse is "off", i.e. the time between successive pulses. This value is used to determine noise statistics and to reject short drops in amplitude during pulse "ON" time. The available value range may be restricted by the sample rate.

Parameters:

<PulseMinOff> Range: 50ns to 100s
 *RST: 1 us
 Default unit: S

Manual operation: See "[Min Pulse Off Time](#)" on page 59

[SENSe:]TRACe:MEASurement:DEFine:FREQuency:OFFSet <Offset>

Defines a known frequency offset to be corrected in the pulse acquisition data.

Use the [\[SENSe:\]TRACe:MEASurement:DEFine:FREQuency:OFFSet:AUTO](#) to define the frequency offset automatically.

Parameters:

<Offset> *RST: 0
 Default unit: HZ

Manual operation: See "[Frequency Offset Value](#)" on page 59

[SENSe:]TRACe:MEASurement:DEFine:FREQuency:OFFSet:AUTO <State>

If enabled, the frequency offset is estimated automatically for each individual pulse.

Parameters:

<State>	ON OFF 0 1
	*RST: 1

Manual operation: See "[Frequency Offset Auto Mode](#)" on page 59

[SENSe:]TRACe:MEASurement:DEFine:FREQuency:RATE <PulseChirpRate>

Defines a known frequency chirp rate (in Hz/μs) to be used to generate an ideal pulse waveform for computing frequency and phase error parameters. This value is assumed constant for all measured pulses.

Use the [\[SENSe:\]TRACe:MEASurement:DEFine:FREQuency:RATE:AUTO](#) to define the chirp rate automatically.

Parameters:

<PulseChirpRate>	*RST: 0
	Default unit: Hz/μs

Manual operation: See "[Chirp Rate](#)" on page 60

[SENSe:]TRACe:MEASurement:DEFine:FREQuency:RATE:AUTO <State>

If enabled, the chirp rate is estimated automatically for each individual pulse.

Parameters:

<State>	ON OFF 0 1
	*RST: 1

Manual operation: See "[Chirp Rate Auto Mode](#)" on page 60

[SENSe:]TRACe:MEASurement:DEFine:PULSe:ADRoop <State>**Parameters:**

<State>	ON OFF 0 1
	*RST: 1

Manual operation: See "[Pulse Has Droop](#)" on page 58

[SENSe:]TRACe:MEASurement:DEFine:PULSe:MODulation <Modulation>

The type of pulse modulation which is expected.

Parameters:

<Modulation>	ARB CW LFM RIQ
	ARB
	Arbitrary

CW

Continuous wave

LFM

Linear FM (fixed value)

*RST: CW

Manual operation: See "[Pulse Modulation](#)" on page 58**[SENSe:]TRACe:MEASurement:DEFIne:PULSe:PERiod <PulsePeriod>**

This command defines how a pulse is detected.

Parameters:

<PulsePeriod> HL | LH

HL

The pulse period begins with the falling edge of the preceding pulse and ends with the falling edge of the current pulse.

LH

The pulse period begins with the rising edge of the current pulse and end with the rising edge of the succeeding pulse.

*RST: HL

Manual operation: See "[Pulse Period](#)" on page 58

9.5 Input/output settings

The R&S FSMR3 can analyze signals from different input sources (such as RF, power sensors etc.) and provide various types of output (such as noise or trigger signals). The following commands are required to configure data input and output.

- [RF input](#).....137
- [Input from I/Q data files](#).....141
- [Configuring the outputs](#).....141

9.5.1 RF input

INPut<ip>:ATTenuation:PROtection:RESet	138
INPut<ip>:ATTenuation:PROtection[:STATe]	138
INPut<ip>:COUPling	138
INPut<ip>:DPATH	139
INPut<ip>:FILTer:HPAsSs[:STATe]	139
INPut<ip>:FILTer:YIG[:STATe]	140
INPut<ip>:IMPedance	140
INPut<ip>:SELect	140

INPut<ip>:ATTenuation:PROTection:RESet

This command resets the attenuator and reconnects the RF input with the input mixer for the R&S FSMR3000 after an overload condition occurred and the protection mechanism intervened. The error status bit (bit 3 in the STAT:QUES:POW status register) and the INPUT OVLD message in the status bar are cleared.

(For details on the status register see the R&S FSMR3000 base unit user manual).

The command works only if the overload condition has been eliminated first.

Suffix:

<ip>	1 2 irrelevant
------	---------------------

Example: INP:ATT:PROT:RES

INPut<ip>:ATTenuation:PROTection[:STATE] <State>

This command turns the availability of attenuation levels of 10 dB or less on and off.

Suffix:

<ip>	1 2 irrelevant
------	---------------------

Parameters:

<State>	ON OFF 1 0
---------	------------------

ON | 1

Attenuation levels of 10 dB or less are not allowed to protect the RF input connector of the R&S FSMR3000.

OFF | 0

Attenuation levels of 10 dB or less are not blocked. Provide appropriate protection for the RF input connector of the R&S FSMR3000 yourself.

*RST: 1

Example: INP:ATT:PROT ON

Turns on the input protection.

INPut<ip>:COUPLing <CouplingType>

This command selects the coupling type of the RF input.

Suffix:

<ip>	1 2 irrelevant
------	---------------------

Parameters:

<CouplingType>	AC DC
----------------	---------

AC

AC coupling

DC
DC coupling
*RST: AC

Example: INP:COUP DC

Manual operation: See "[Input Coupling](#)" on page 62

INPut<ip>:DPATH <DirectPath>

Enables or disables the use of the direct path for frequencies close to 0 Hz.

Suffix:

<ip>	1 2
	irrelevant

Parameters:

<DirectPath>	AUTO OFF
	AUTO 1
	(Default) the direct path is used automatically for frequencies close to 0 Hz.
	OFF 0
	The analog mixer path is always used.

Example: INP:DPAT OFF

INPut<ip>:FILT:HPAS[:STATe] <State>

Activates an additional internal high-pass filter for RF input signals from 1 GHz to 3 GHz. This filter is used to remove the harmonics of the R&S FSMR3000 to measure the harmonics for a DUT, for example.

This function requires an additional high-pass filter hardware option.

(Note: for RF input signals outside the specified range, the high-pass filter has no effect. For signals with a frequency of approximately 4 GHz upwards, the harmonics are suppressed sufficiently by the YIG-preselector, if available.)

Suffix:

<ip>	1 2
	irrelevant

Parameters:

<State>	ON OFF 0 1
	OFF 0
	Switches the function off
	ON 1
	Switches the function on
	*RST: 0

Example: INP:FILT:HPAS ON

Turns on the filter.

Manual operation: See "[High Pass Filter 1 to 3 GHz](#)" on page 62

INPut<ip>:FILTer:YIG[:STATe] <State>

Enables or disables the YIG filter.

Suffix:

<ip>	1 2 irrelevant
------	---------------------

Example:

INP:FILT:YIG OFF

Deactivates the YIG-preselector.

Manual operation: See "[YIG-Preselector](#)" on page 62

INPut<ip>:IMPedance <Impedance>

This command selects the nominal input impedance of the RF input. In some applications, only 50 Ω are supported.

Suffix:

<ip>	1 2 irrelevant
------	---------------------

Parameters:

<Impedance>	50 75 *RST: 50 Ω Default unit: OHM
-------------	--

Example:

INP:IMP 75

Manual operation: See "[Impedance](#)" on page 62

INPut<ip>:SELect <Source>

This command selects the signal source for measurements, i.e. it defines which connector is used to input data to the R&S FSMR3.

Suffix:

<ip>	1 2 irrelevant
------	---------------------

Parameters:

<Source>	RF Radio Frequency ("RF INPUT" connector) *RST: RF
----------	---

Manual operation: See "[Radio Frequency State](#)" on page 61

9.5.2 Input from I/Q data files

The input for measurements can be provided from I/Q data files. The commands required to configure the use of such files are described here.

Useful commands for retrieving results described elsewhere:

- [INPut<ip>:SElect](#) on page 140

Remote commands exclusive to input from I/Q data files:

INPut<ip>:FILE:PATH..... 141

INPut<ip>:FILE:PATH <FileName>[, <AnalysisBW>]

This command selects the I/Q data file to be used as input for further measurements.

The I/Q data must have a specific format as described in R&S FSMR3 I/Q Analyzer and I/Q Input User Manual.

Suffix:

<ip> 1 | 2
 irrelevant

Parameters:

<FileName> String containing the path and name of the source file.
The file extension is *.iq.tar.
<AnalysisBW> Optionally: The analysis bandwidth to be used by the measurement. The bandwidth must be smaller than or equal to the bandwidth of the data that was stored in the file.
Default unit: HZ

Example: INP:FILE:PATH 'C:\R_S\Instr\user\data.iq.tar'
Uses I/Q data from the specified file as input.

Example: INP:FILE:PATH 'C:\R_S\Instr\user\data.iq.tar',
10MHz
Uses an analysis bandwidth of 10 MHz of the data provided in the file.

9.5.3 Configuring the outputs

The following commands are required to provide output from the R&S FSMR3.

9.6 Frontend configuration

The following commands are required to configure frequency and amplitude settings, which represent the "frontend" of the measurement setup.

• Frequency.....	142
• Amplitude settings.....	143
• Configuring the attenuation.....	145

9.6.1 Frequency

[SENSe:]FREQuency:CENTER.....	142
[SENSe:]FREQuency:CENTER:STEP.....	142
[SENSe:]FREQuency:CENTER:STEP:AUTO.....	142
[SENSe:]FREQuency:OFFSet.....	143

[SENSe:]FREQuency:CENTER <Frequency>

This command defines the center frequency.

Parameters:

<Frequency> The allowed range and f_{max} is specified in the data sheet.
 *RST: fmax/2
 Default unit: Hz

Example:

```
FREQ:CENT 100 MHz
FREQ:CENT:STEP 10 MHz
FREQ:CENT UP
Sets the center frequency to 110 MHz.
```

Manual operation: See "Center Frequency" on page 63

[SENSe:]FREQuency:CENTER:STEP <StepSize>

This command defines the center frequency step size.

You can increase or decrease the center frequency quickly in fixed steps using the SENS:FREQ UP AND SENS:FREQ DOWN commands, see [SENSe:] FREQuency: CENTER on page 142.

Parameters:

<StepSize> f_{max} is specified in the data sheet.
 Range: 1 to fMAX
 *RST: 0.1 x span
 Default unit: Hz

Example:

```
//Set the center frequency to 110 MHz.
FREQ:CENT 100 MHz
FREQ:CENT:STEP 10 MHz
FREQ:CENT UP
```

Manual operation: See "Center Frequency Stepsize" on page 63

[SENSe:]FREQuency:CENTER:STEP:AUTO <State>

This command couples or decouples the center frequency step size to the span.

Parameters:

<State> ON | OFF | 0 | 1
 *RST: 1

Example:

FREQ:CENT:STEP:AUTO ON

Activates the coupling of the step size to the span.

[SENSe:]FREQuency:OFFSet <Offset>

This command defines a frequency offset.

If this value is not 0 Hz, the application assumes that the input signal was frequency shifted outside the application. All results of type "frequency" will be corrected for this shift numerically by the application.

See also "[Frequency Offset](#)" on page 64.

Parameters:

<Offset> Range: -1 THz to 1 THz
 *RST: 0 Hz
 Default unit: Hz

Example:

FREQ:OFFS 1GHZ

Manual operation: See "[Frequency Offset](#)" on page 64

9.6.2 Amplitude settings

The following commands are required to configure the amplitude settings in a remote environment.

Useful commands for amplitude settings described elsewhere:

- [INPut<ip>:COUpling](#) on page 138
- [INPut<ip>:IMPedance](#) on page 140
- [DISPlay\[:WINDOW<n>\]\[:SUBWindow<w>\]:TRACe<t>:Y\[:SCALE\]:AUTO](#)
on page 232

Remote commands exclusive to amplitude settings:

[SENSe:]ADJust:LEVel.....	143
DISPlay[:WINDOW<n>][:SUBWindow<w>]:TRACe<t>:Y[:SCALE]:RLEVel.....	144
DISPlay[:WINDOW<n>][:SUBWindow<w>]:TRACe<t>:Y[:SCALE]:RLEVel:OFFSet.....	144
INPut<ip>:GAIN:STATE.....	144
INPut<ip>:GAIN[:VALue].....	145

[SENSe:]ADJust:LEVel

Initiates a single (internal) measurement that evaluates and sets the ideal reference level for the current input data and measurement settings. Thus, the settings of the RF attenuation and the reference level are optimized for the signal level. The R&S FSMR3 is not overloaded and the dynamic range is not limited by an S/N ratio that is too small.

Example: ADJ:LEV

**DISPlay[:WINDOW<n>][:SUBWindow<w>]:TRACe<t>:Y[:SCALe]:RLEVel
<ReferenceLevel>**

This command defines the reference level (for all traces in all windows).

With a reference level offset $\neq 0$, the value range of the reference level is modified by the offset.

Suffix:

<n>	irrelevant
<w>	subwindow Not supported by all applications
<t>	irrelevant

Parameters:

<ReferenceLevel>	The unit is variable. Range: see datasheet *RST: 0 dBm Default unit: DBM
------------------	---

Example: DISP:TRAC:Y:RLEV -60dBm

Manual operation: See "[Reference Level](#)" on page 65

**DISPlay[:WINDOW<n>][:SUBWindow<w>]:TRACe<t>:Y[:SCALe]:RLEVel:OFFSet
<Offset>**

This command defines a reference level offset (for all traces in all windows).

Suffix:

<n>	irrelevant
<w>	subwindow Not supported by all applications
<t>	irrelevant

Parameters:

<Offset>	Range: -200 dB to 200 dB *RST: 0dB Default unit: DB
----------	---

Example: DISP:TRAC:Y:RLEV:OFFS -10dB

Manual operation: See "[Shifting the Display \(Offset\)](#)" on page 65

INPut<ip>:GAIN:STATE <State>

This command turns the internal preamplifier on and off. It requires the optional preamplifier hardware.

The preamplification value is defined using the `INPut<ip>:GAIN[:VALue]` on page 145.

Suffix:

<ip>	1 2 irrelevant
------	---------------------

Parameters:

<State>	ON OFF 0 1 OFF 0 Switches the function off ON 1 Switches the function on
	*RST: 0

Example: `INP:GAIN:STAT ON`

`INP:GAIN:VAL 15`
Switches on 15 dB preamplification.

Manual operation: See "Preamplifier" on page 66

INPut<ip>:GAIN[:VALue] <Gain>

This command selects the "gain" if the preamplifier is activated (`INP:GAIN:STAT ON`, see `INPut<ip>:GAIN:STATE` on page 144).

The command requires the additional preamplifier hardware option.

Suffix:

<ip>	1 2 irrelevant
------	---------------------

Parameters:

<Gain>	For FSMR3008 and FSMR3026, the following settings are available: 15 dB and 30 dB All other values are rounded to the nearest of these two. FMSR3050: 30 dB Default unit: DB
--------	--

Example: `INP:GAIN:STAT ON`

`INP:GAIN:VAL 30`
Switches on 30 dB preamplification.

Manual operation: See "Preamplifier" on page 66

9.6.3 Configuring the attenuation

<code>INPut<ip>:ATTenuation</code>	146
<code>INPut<ip>:ATTenuation:AUTO</code>	146

INPut<ip>:ATTenuation <Attenuation>

This command defines the total attenuation for RF input.

If you set the attenuation manually, it is no longer coupled to the reference level, but the reference level is coupled to the attenuation. Thus, if the current reference level is not compatible with an attenuation that has been set manually, the command also adjusts the reference level.

Suffix:

<ip>	1 2 irrelevant
------	---------------------

Parameters:

<Attenuation>	Range: see data sheet Increment: 5 dB (with optional electr. attenuator: 1 dB) *RST: 10 dB (AUTO is set to ON) Default unit: DB
---------------	--

Example:

INP:ATT 30dB

Defines a 30 dB attenuation and decouples the attenuation from the reference level.

Manual operation: See "[Attenuation Mode / Value](#)" on page 66

INPut<ip>:ATTenuation:AUTO <State>

This command couples or decouples the attenuation to the reference level. Thus, when the reference level is changed, the R&S FSMR3 determines the signal level for optimal internal data processing and sets the required attenuation accordingly.

Suffix:

<ip>	1 2 irrelevant
------	---------------------

Parameters:

<State>	ON OFF 0 1 *RST: 1
---------	-----------------------------

Example:

INP:ATT:AUTO ON

Couples the attenuation to the reference level.

Manual operation: See "[Attenuation Mode / Value](#)" on page 66

9.7 Triggering measurements

Useful commands for triggering described elsewhere:

- [[SENSe : \] FREQuency:CENTER](#) on page 142

Remote commands exclusive to triggering:

- Configuring the triggering conditions 147
- Configuring the trigger output 151

9.7.1 Configuring the triggering conditions

TRIGger[:SEQUence]:DTIMe	147
TRIGger[:SEQUence]:HOLDoff[:TIME]	147
TRIGger[:SEQUence]:IFPower:HOLDoff	148
TRIGger[:SEQUence]:IFPower:HYSTeresis	148
TRIGger[:SEQUence]:LEVel[:EXTernal<port>]	148
TRIGger[:SEQUence]:LEVel:IFPower	149
TRIGger[:SEQUence]:LEVel:IQPower	149
TRIGger[:SEQUence]:LEVel:RFPower	149
TRIGger[:SEQUence]:RFPower:HOLDoff	150
TRIGger[:SEQUence]:SLOPe	150
TRIGger[:SEQUence]:SOURce	150

TRIGger[:SEQUence]:DTIMe <DropoutTime>

Defines the time the input signal must stay below the trigger level before a trigger is detected again.

Parameters:

<DropoutTime> Dropout time of the trigger.
 Range: 0 s to 10.0 s
 *RST: 0 s
 Default unit: S

Manual operation: See "Drop-Out Time" on page 70

TRIGger[:SEQUence]:HOLDoff[:TIME] <Offset>

Defines the time offset between the trigger event and the start of the measurement.

A negative offset is possible for time domain measurements.

Parameters:

<Offset> For measurements in the frequency domain, the range is 0 s to 30 s.
 For measurements in the time domain, the range is the negative measurement time to 30 s.
 *RST: 0 s
 Default unit: S

Example: TRIG:HOLD 500us

Manual operation: See "Trigger Offset" on page 70

TRIGger[:SEQUence]:IFPower:HOLDoff <Period>

This command defines the holding time before the next trigger event.

Note that this command can be used for **any trigger source**, not just IF Power (despite the legacy keyword).

Parameters:

<Period>	Range: 0 s to 10 s *RST: 0 s Default unit: S
----------	--

Example:

```
TRIG:SOUR EXT  
Sets an external trigger source.  
TRIG:IFP:HOLD 200 ns  
Sets the holding time to 200 ns.
```

Manual operation: See "[Trigger Holdoff](#)" on page 71

TRIGger[:SEQUence]:IFPower:HYSTeresis <Hysteresis>

This command defines the trigger hysteresis, which is only available for "IF Power" trigger sources.

Parameters:

<Hysteresis>	Range: 3 dB to 50 dB *RST: 3 dB Default unit: DB
--------------	--

Example:

```
TRIG:SOUR IFP  
Sets the IF power trigger source.  
TRIG:IFP:HYST 10DB  
Sets the hysteresis limit value.
```

Manual operation: See "[Hysteresis](#)" on page 70

TRIGger[:SEQUence]:LEVel[:EXTernal<port>] <TriggerLevel>

This command defines the level the external signal must exceed to cause a trigger event.

Suffix:

<port>	Selects the trigger port. 1 = trigger port 1 (TRIGGER INPUT/OUTPUT connector on front panel) 2 = trigger port 2 (TRIGGER INPUT/OUTPUT connector on rear panel)
--------	--

Parameters:

<TriggerLevel>	Range: 0.5 V to 3.5 V *RST: 1.4 V Default unit: V
----------------	---

Example:

```
TRIG:LEV 2V
```

Manual operation: See "[Trigger Level](#)" on page 70

TRIGger[:SEQuence]:LEVel:IFPower <TriggerLevel>

This command defines the power level at the third intermediate frequency that must be exceeded to cause a trigger event.

Note that any RF attenuation or preamplification is considered when the trigger level is analyzed. If defined, a reference level offset is also considered.

Parameters:

<TriggerLevel> For details on available trigger levels and trigger bandwidths, see the data sheet.
*RST: -20 dBm
Default unit: DBM

Example: TRIG:LEV:IFP -30DBM

Manual operation: See "[Trigger Level](#)" on page 70

TRIGger[:SEQuence]:LEVel:IQPower <TriggerLevel>

This command defines the magnitude the I/Q data must exceed to cause a trigger event.

Note that any RF attenuation or preamplification is considered when the trigger level is analyzed. If defined, a reference level offset is also considered.

Parameters:

<TriggerLevel> Range: -130 dBm to 30 dBm
*RST: -20 dBm
Default unit: DBM

Example: TRIG:LEV:IQP -30DBM

Manual operation: See "[Trigger Level](#)" on page 70

TRIGger[:SEQuence]:LEVel:RFPower <TriggerLevel>

This command defines the power level the RF input must exceed to cause a trigger event. Note that any RF attenuation or preamplification is considered when the trigger level is analyzed. If defined, a reference level offset is also considered.

The input signal must be between 500 MHz and 8 GHz.

Parameters:

<TriggerLevel> For details on available trigger levels and trigger bandwidths, see the data sheet.
*RST: -20 dBm
Default unit: DBM

Example: TRIG:LEV:RFP -30dBm

Manual operation: See "[Trigger Level](#)" on page 70

TRIGger[:SEQUence]:RFPower:HOLDoff <Time>

This command defines the holding time before the next trigger event. Note that this command is available for any trigger source, not just RF Power.

Note that this command is maintained for compatibility reasons only. Use the [TRIGger\[:SEQUence\]:IFPower:HOLDoff](#) on page 148 command for new remote control programs.

Parameters:

<Time> Default unit: S

TRIGger[:SEQUence]:SLOPe <Type>**Parameters:**

<Type> POSitive | NEGative

POSitive

Triggers when the signal rises to the trigger level (rising edge).

NEGative

Triggers when the signal drops to the trigger level (falling edge).

*RST: POSitive

Example: TRIG:SLOP NEG

Manual operation: See "[Slope](#)" on page 70

TRIGger[:SEQUence]:SOURce <Source>

This command selects the trigger source.

Note on external triggers:

If a measurement is configured to wait for an external trigger signal in a remote control program, remote control is blocked until the trigger is received and the program can continue. Make sure that this situation is avoided in your remote control programs.

Parameters:

<Source> IMMEDIATE

Free Run

EXT | EXT2

Trigger signal from one of the "Trigger Input/Output" connectors.
Note: Connector must be configured for "Input".

IFPower

Second intermediate frequency

IQPower

Magnitude of sampled I/Q data

For applications that process I/Q data, such as the I/Q Analyzer or optional applications.

*RST: IMMEDIATE

Example:	TRIG:SOUR EXT Selects the external trigger input as source of the trigger signal
Manual operation:	See "Trigger Source" on page 68 See "Free Run" on page 68 See "Ext. Trigger 1/2" on page 68 See "I/Q Power" on page 69 See "IF Power" on page 69 See "RF Power" on page 69

9.7.2 Configuring the trigger output

The following commands are required to send the trigger signal to one of the variable "TRIGGER INPUT/OUTPUT" connectors on the R&S FSMR3000.

OUTPut<up>:TRIGger<tp>:DIRection	151
OUTPut<up>:TRIGger<tp>:LEVel	151
OUTPut<up>:TRIGger<tp>:OTYPE	152
OUTPut<up>:TRIGger<tp>:PULSe:IMMEDIATE	152
OUTPut<up>:TRIGger<tp>:PULSe:LENGTH	152

OUTPut<up>:TRIGger<tp>:DIRection <Direction>

This command selects the trigger direction for trigger ports that serve as an input as well as an output.

Suffix:

<up>	irrelevant
<tp>	Selects the used trigger port. <2>: selects trigger port 2 (on the rear panel).

Parameters:

<Direction>	INPut OUTPut
	INPut
	Port works as an input.
	OUTPut
	Port works as an output.

*RST: INPut

Manual operation: See "[Trigger 1/2](#)" on page 71

OUTPut<up>:TRIGger<tp>:LEVel <Level>

This command defines the level of the (TTL compatible) signal generated at the trigger output.

This command works only if you have selected a user-defined output with [OUTPut<up>:TRIGger<tp>:OTYPE](#).

Suffix:

<up>	1..n
------	------

<tp> Selects the trigger port to which the output is sent.

Parameters:

<Level> **HIGH**

5 V

LOW

0 V

*RST: LOW

Example: OUTP:TRIG2:LEV HIGH

Manual operation: See "[Level](#)" on page 72

OUTPut<up>:TRIGger<tp>:OTYPe <OutputType>

This command selects the type of signal generated at the trigger output.

Suffix:

<up> 1..n

<tp> Selects the trigger port to which the output is sent.
2 = trigger port 2 (rear panel)

Parameters:

<OutputType> **DEvice**

Sends a trigger signal when the R&S FSMR3 has triggered internally.

TARMed

Sends a trigger signal when the trigger is armed and ready for an external trigger event.

UDEFined

Sends a user-defined trigger signal. For more information, see [OUTPut<up>:TRIGger<tp>:LEVel](#).

*RST: DEvice

Manual operation: See "[Output Type](#)" on page 71

OUTPut<up>:TRIGger<tp>:PULSe:IMMEDIATE

This command generates a pulse at the trigger output.

Suffix:

<up> Selects the trigger port to which the output is sent.
2 = trigger port 2 (rear)

<tp> 1..n

Manual operation: See "[Send Trigger](#)" on page 72

OUTPut<up>:TRIGger<tp>:PULSe:LENGTH <Length>

This command defines the length of the pulse generated at the trigger output.

Suffix:

- <up> 1..n
 <tp> Selects the trigger port to which the output is sent.
 2 = trigger port 2 (rear)

Parameters:

- <Length> Pulse length in seconds.
 Default unit: S

Example: OUTP:TRIG2:PULS:LENG 0.02

Manual operation: See "[Pulse Length](#)" on page 72

9.8 Data acquisition

The following commands are required to configure how much and how data is captured from the input signal.

[SENSe:]BANDwidth:DEMod.....	153
[SENSe:]BWIDth:DEMod.....	153
[SENSe:]BANDwidth:DEMod:TYPE.....	153
[SENSe:]BWIDth:DEMod:TYPE.....	153
[SENSe:]DEMod:FMVF:TYPE.....	154
[SENSe:]RLENGTH?.....	154
[SENSe:]SRATE?.....	154
[SENSe:]SWEEP:TIME.....	155
TRACe:IQ:LCAPture.....	155

[SENSe:]BANDwidth:DEMod <Bandwidth>

[SENSe:]BWIDth:DEMod <Bandwidth>

Sets/queries the measurement bandwidth in Hz.

The measurement bandwidth is defined by the used filter and the sample rate. For information on supported sample rates and filter bandwidths see the data sheet.

Parameters:

- <Bandwidth> *RST: 80.0 MHz
 Default unit: HZ

[SENSe:]BANDwidth:DEMod:TYPE <FilterType>

[SENSe:]BWIDth:DEMod:TYPE <FilterType>

This command defines the type of demodulation filter to be used. For information on supported filter bandwidths see the data sheet.

Parameters:

- <FilterType> FLAT | GAUSS
FLAT
 Standard flat demodulation filter

GAUSs

Gaussian filter for optimized settling behavior

For Gaussian filters with a large 3dB bandwidth (> 40 MHz, only available with the bandwidth extension option) the actual filter shape deviates strongly from the ideal Gauss filter outside a range of approximately ±80 MHz. For this range the flat filter is more accurate.

For details see [Chapter B, "Effects of large gauss filters", on page 337](#).

*RST: GAUS

Manual operation: See "[Filter type](#)" on page 73

[SENSe:]DEMod:FMVF:TYPE <Filter>

Activates or deactivates additional filters applied after demodulation to filter out unwanted signals, or correct pre-emphasized input signals.

Parameters:

<Filter>	NONE LP01 LP1 LP5 LP10 LP25
	NONE
	No video filter applied
	LP01
	Low pass filter 0.1 % bandwidth
	LP1
	Low pass filter 1 % bandwidth
	LP5
	Low pass filter 5 % bandwidth
	LP10
	Low pass filter 10 % bandwidth
	LP25
	Low pass filter 25 % bandwidth

Example: SENS:DEM:FMVF:TYPE LP01

Manual operation: See "[FM Video Bandwidth](#)" on page 91

[SENSe:]RLENGth?

This command returns the record length in samples set up for current measurement settings.

Usage: Query only

Manual operation: See "[Record length](#)" on page 74

[SENSe:]SRATE?

This command returns the sample rate set up for current measurement settings.

Return values:

<SampleRate> Current sample rate used by the application.

Usage: Query only

[SENSe:]SWEEp:TIME <Time>

This command defines the measurement time. It automatically decouples the time from any other settings.

The maximum measurement time in the R&S FSMR3000 Pulse application is limited only by the available memory ("memory limit reached" message is shown in status bar). Note, however, that increasing the measurement time (and thus reducing the available memory space) may restrict the number of measurement channels that can be activated simultaneously on the R&S FSMR3.

Parameters:

<Time> refer to data sheet

*RST: depends on current settings (determined automatically)

Default unit: S

Manual operation: See "[Measurement Time](#)" on page 74

TRACe:IQ:LCAPTure <State>

The long capture buffer provides functionality to use the full I/Q memory depth of the R&S FSMR3 for data acquisition.

Parameters:

<State> AUTO | ON | OFF

AUTO

The long capture buffer is activated in case that the record length exceeds the amount of data which can be acquired within the standard memory capacity of the R&S FSMR3. If the record length decreases again, the long capture buffer is deactivated automatically.

ON

The long capture buffer is activated permanently. A data capture in a different measurement channel will overwrite and invalidate the acquired I/Q data. A red "IQ" icon in the channel tab indicates that the results for the channel no longer match the data currently in the capture buffer.

OFF

This is the default setting. Only the standard I/Q memory capacity of the R&S FSMR3 is used. The available I/Q memory capacity is shared by all measurement channels.

9.9 Pulse detection

The pulse detection settings define the conditions under which a pulse is detected within the input signal.

[SENSe:]DETect:LIMit.....	156
[SENSe:]DETect:LIMit:COUNt.....	156
[SENSe:]DETect:HYSTeresis.....	157
[SENSe:]DETect:RANGe.....	157
[SENSe:]DETect:RANGE:LENGth.....	157
[SENSe:]DETect:RANGE:STARt.....	157
[SENSe:]DETect:REFerence.....	158
[SENSe:]DETect:THRESHold.....	158

[SENSe:]DETect:LIMit <State>

If enabled, the number of pulses to be detected is restricted. When the maximum number is exceeded, measurement is stopped for the current capture buffer. This limitation can be used to speed up the measurement if only a small number of pulses is of interest.

The maximum number of pulses to be detected is defined using the [SENSe:] DETect:LIMit:COUNt command.

Parameters:

<State>	ON OFF 0 1
	OFF 0
	Switches the function off
	ON 1
	Switches the function on

*RST: 0

Manual operation: See "Detection Limit" on page 78

[SENSe:]DETect:LIMit:COUNt <MaxPulseCount>

Defines the maximum number of pulses to be detected.

This limit is only considered if [SENSe:] DETect:LIMit is enabled.

Parameters:

<MaxPulseCount>	integer
	Range: 0 to see data sheet
	*RST: 1000

Manual operation: See "Maximum Pulse Count" on page 78

[SENSe:]DETect:HYSTeresis <Hysteresis>

Defines a hysteresis for pulse detection in dB in relation to the defined threshold (see [\[SENSe:\] DETect:THreshold](#) on page 158). As long as the signal does not exceed the hysteresis, the next threshold crossing is ignored.

Parameters:

<Hysteresis> *RST: 0
Default unit: DB

Manual operation: See "[Hysteresis](#)" on page 78

[SENSe:]DETect:RANGE <State>

Enables or disables the use of a detection range instead of the entire capture buffer for analysis.

Parameters:

<State> ON | OFF | 0 | 1
OFF | 0
The entire capture buffer is analyzed.
ON | 1
The range defined by [\[SENSe:\] DETect:RANGE:STAR](#) and [\[SENSe:\] DETect:RANGE:LENGTH](#) is analyzed.
*RST: 0

Example: SENS:DET:RANG ON
SENS:DET:RANG:STAR 10ms
SENS:DET:RANG:LENG 100ms

Manual operation: See "[Detection Range](#)" on page 78

[SENSe:]DETect:RANGE:LENGTH <DetectionLength>

Defines the length of the detection range as a time in seconds.

This command is only available for [\[SENSe:\] DETect:RANGE](#) ON.

Parameters:

<DetectionLength> Default unit: S

Example: SENS:DET:RANG ON
SENS:DET:RANG:STAR 10ms
SENS:DET:RANG:LENG 100ms

Manual operation: See "[Detection Length](#)" on page 79

[SENSe:]DETect:RANGE:START <DetectionStart>

Defines the beginning of the detection range as the time in seconds from the capture buffer start.

This command is only available for [\[SENSe:\] DETect:RANGE ON](#).

Parameters:

<DetectionStart> Time from the capture buffer start
Default unit: S

Example:

```
SENS:DET:RANG ON  
SENS:DET:RANG:STAR 10ms  
SENS:DET:RANG:LENG 100ms
```

Manual operation: See "[Detection Start](#)" on page 78

[SENSe:] DETect:REFerence <Reference>

The reference level to be used for setting the pulse detection threshold.

Parameters:

<Reference> REFLevel | PEAK | NOISe | ABSolute
REFLevel
Current reference level
PEAK
Peak level as measured over the entire capture data interval
NOISe
Noise level determined from the current capture data according to [\[SENSe:\] TRACe:MEASurement:DEFine:DURation:MIN](#) on page 135.
ABSolute
Absolute level defined by [\[SENSe:\] DETect:THreshold](#) on page 158.
*RST: PEAK

Manual operation: See "[Reference Source](#)" on page 77

[SENSe:] DETect:THreshold <Level>

The threshold determines whether a pulse is detected or not. The top of a pulse must exceed the threshold in order to be detected. The threshold is defined in relation to the reference defined by [\[SENSe:\] DETect:REFerence](#).

Parameters:

<Level> numeric value in dB or dBm, depending on reference type
*RST: -10.0

Manual operation: See "[Threshold](#)" on page 78

9.10 Configuring the pulse measurement

The following commands determine how much data is measured for each pulse, in relation to defined levels, points, or ranges.

- [Measurement levels](#).....159
- [Measurement point](#).....162
- [Measurement range](#).....164

9.10.1 Measurement levels

[SENSe:]TRACe:MEASurement:ALGorithm.....	159
[SENSe:]TRACe:MEASurement:DEFine:AMPLitude:UNIT.....	159
[SENSe:]TRACe:MEASurement:DEFine:BOUNDary:TOP.....	160
[SENSe:]TRACe:MEASurement:DEFine:COMPensate:ADRoop.....	160
[SENSe:]TRACe:MEASurement:DEFine:RIPPle.....	160
[SENSe:]TRACe:MEASurement:DEFine:TOP:FIXed.....	160
[SENSe:]TRACe:MEASurement:DEFine:TRANSition:HREFerence.....	161
[SENSe:]TRACe:MEASurement:DEFine:TRANSition:LREFerence.....	161
[SENSe:]TRACe:MEASurement:DEFine:TRANSition:REFERENCE.....	161

[SENSe:]TRACe:MEASurement:ALGorithm <Algorithm>

The measurement algorithm used for finding the pulse top and base levels.

Parameters:

<Algorithm>

MEAN

The arithmetic average of the measured values

MEDian

The level for which half the values lie above, the other half below in the histogram

PEAKpower

The peak power is used to detect the pulse top level.

FIXed

A fixed pulse top level value is used

*RST: MEDian

Example:

SENS:TRAC:MEAS:ALG PEAK

Manual operation: See "[Measurement Algorithm](#)" on page 81

[SENSe:]TRACe:MEASurement:DEFine:AMPLitude:UNIT <Unit>

Defines the unit of the pulse amplitude values, i.e. whether magnitude (V) or power (W, dBm) values are used to determine the threshold levels for fall and rise times.

Parameters:

<Unit>

V | W | DBM

*RST: V

Manual operation: See "[Reference Level Unit](#)" on page 81

[SENSe:]TRACe:MEASurement:DEFIne:BOUNdary:TOP <PulseInstant>

The boundary in percent of the pulse amplitude to either side of the pulse top (ON state). Used to determine the settling time, for example. Once the signal remains within the boundary, it is assumed to have settled.

Parameters:

<PulseInstant>	percentage
	Range: 1 to 20
	*RST: 3

Manual operation: See "[Boundary](#)" on page 82

[SENSe:]TRACe:MEASurement:DEFIne:COMPensate:ADRoop <State>

Determines whether the 100% value (from base to top) for the rise and fall time measurements is calculated from the Edges.

This allows you to consider a "droop" in the pulse top during the pulse measurements. If a droop is to be considered, the 100% value must be calculated separately for the rising and falling edges.

Parameters:

<State>	ON 1
	The 100% value is measured separately for the rising and falling edges.
	OFF 0
	The 100% value is measured at the pulse center and used for all measurements.
	*RST: 1

Manual operation: See "[Position](#)" on page 80

[SENSe:]TRACe:MEASurement:DEFIne:RIPPLe <Portion>

Determines portion of the pulse top which is used to measure the ripple.

Parameters:

<Portion>	percentage
	Range: 0 to 100
	*RST: 50

Manual operation: See "[Ripple Portion](#)" on page 81

[SENSe:]TRACe:MEASurement:DEFIne:TOP:FIXed <TopFixed>

Defines the top power level value to be used by the pulse measurement algorithm.

This command is only available for `[SENSe:]TRACe:MEASurement:ALGorithm FIXed`

Parameters:

<TopFixed> numeric value
Default unit: dBm

Example: SENS:TRAC:MEAS:ALG FIXED
SENS:TRAC:MEAS:DEF:TOP:FIX -10

Manual operation: See "[Fixed Value](#)" on page 81

[SENSe:]TRACe:MEASurement:DEFIne:TRANSition:HREFerence <Threshold>

The upper threshold in percent of the pulse amplitude used to signify the end of a rising or beginning of a falling signal level.

Parameters:

<Threshold> percentage
Range: 0 to 100
*RST: 90

Manual operation: See "[High \(Distal\) Threshold](#)" on page 81

[SENSe:]TRACe:MEASurement:DEFIne:TRANSition:LREFerence <Threshold>

The lower threshold in percent of the pulse amplitude used to signify the end of a falling or beginning of a rising signal level.

Parameters:

<Threshold> percentage
Range: 0 to 100
*RST: 10

Manual operation: See "[Low \(Proximal\) Threshold](#)" on page 82

[SENSe:]TRACe:MEASurement:DEFIne:TRANSition:REFerence <Threshold>

The threshold in percent of the pulse amplitude used to signify the mid-transition level between pulse states.

Parameters:

<Threshold> percentage
Range: 0 to 100
*RST: 50

Manual operation: See "[Mid \(Mesial\) Threshold](#)" on page 81

9.10.2 Measurement point

[SENSe:]TRACe:MEASurement:DEFine:PULSe:INSTant.....	162
[SENSe:]TRACe:MEASurement:DEFine:PULSe:INSTant:AWINdow.....	162
[SENSe:]TRACe:MEASurement:DEFine:PULSe:INSTant:REFerence.....	162
[SENSe:]TRACe:MEASurement:DEFine:PULSe:REFerence.....	163
[SENSe:]TRACe:MEASurement:DEFine:PULSe:REFerence:POsition.....	163

[SENSe:]TRACe:MEASurement:DEFine:PULSe:INSTant <PulseInstant>

The time instant used for in-pulse measurements e.g. power, phase or frequency.

Parameters:

<PulseInstant>	*RST: 0
	Default unit: S

Manual operation: See "[Offset](#)" on page 83

[SENSe:]TRACe:MEASurement:DEFine:PULSe:INSTant:AWINdow <Length>

The length of an averaging window centered on the Measurement Point.

Parameters:

<Length>	Size of the window around the measurement point used for averaging
	Range: 0 to 10000
	*RST: 0.0
	Default unit: s

Manual operation: See "[Averaging Window](#)" on page 83

[SENSe:]TRACe:MEASurement:DEFine:PULSe:INSTant:REFerence <Reference>

The reference point used for specifying the pulse time instant.

Parameters:

<Reference>	RISE
	The measurement point is defined in reference to the rising edge (mid-level crossing).

CENTer

The measurement point is defined in reference to the center of the pulse (equal distance from the rising and falling mid-level crossings).

FALL

The measurement point is defined in reference to the falling edge (mid-level crossing).

*RST: CENTer

Manual operation: See "[Measurement Point Reference](#)" on page 83

[SENSe:]TRACe:MEASurement:DEFIne:PULSe:REFerence <RefPulseNumber>

Selects a particular pulse to be used as a reference for relative pulse parameters (see [\[SENSe:\] TRACe:MEASurement:DEFIne:PULSe:REFerence:POSITION](#) on page 163).

The number of the current or all detected pulses can be queried using [\[SENSe:\] PULSe:NUMBER?](#) on page 268 or [\[SENSe:\] PULSe:ID?](#) on page 268.

Parameters:

<RefPulseNumber> Range: 0 to number of detected pulses
*RST: 0

Manual operation: See "Reference for Pulse-Pulse Measurements" on page 83

[SENSe:]TRACe:MEASurement:DEFIne:PULSe:REFerence:POSIon <Mode>

Defines the reference pulse on which relative pulse results are based (e.g. for traces normalized to reference pulse, see [Chapter 4.5.2, "Normalizing traces", on page 51](#)).

Parameters:

<Mode> FIXed | SElected | BPULse | APULse
FIXed
A fixed pulse number; the pulse number is specified by [\[SENSe:\] TRACe:MEASurement:DEFIne:PULSe:REFerence](#) on page 163

SElected

The currently selected pulse (see [\[SENSe:\] TRACe:MEASurement:DEFIne:PULSe:SELected](#) on page 170)

BPULse

The nth pulse *before* the currently evaluated pulse, where n is the number specified by [\[SENSe:\] TRACe:MEASurement:DEFIne:PULSe:REFerence](#) on page 163.

No values are available for the first n pulses.

APULse

The nth pulse *after* the currently evaluated pulse, where n is the number specified by [\[SENSe:\] TRACe:MEASurement:DEFIne:PULSe:REFerence](#) on page 163.

No values are available for the last n pulses.

Example:

```
SENS:TRAC:MEAS:DEF:PULS:REF:POS FIX
SENS:TRAC:MEAS:DEF:PULS:REF 1
All relative pulse results are based on pulse number 1.
```

Example:

```
SENS:TRAC:MEAS:DEF:PULS:SEL 2
SENS:TRAC:MEAS:DEF:PULS:REF:POS SEL
All relative pulse results are based on the currently selected pulse number 2.
```

Example:

```
SENS:TRAC:MEAS:DEF:PULS:REF:POS BPUL
SENS:TRAC:MEAS:DEF:PULS:REF 1
For each pulse evaluation, the previous pulse is used as a reference. The first pulse has no results.
```

Example:

```
SENS:TRAC:MEAS:DEF:PULS:REF:POS APUL
SENS:TRAC:MEAS:DEF:PULS:REF 2
For each pulse evaluation, the second-next pulse is used as a reference. The last 2 pulses have no results.
```

Manual operation: See "Reference for Pulse-Pulse Measurements" on page 83

9.10.3 Measurement range

[SENSe:]TRACe:MEASurement:DEFine:PULSe:ESTimation:LENgth.....	164
[SENSe:]TRACe:MEASurement:DEFine:PULSe:ESTimation:OFFSet:LEFT.....	164
[SENSe:]TRACe:MEASurement:DEFine:PULSe:ESTimation:OFFSet:RIGHT.....	164
[SENSe:]TRACe:MEASurement:DEFine:PULSe:ESTimation:REFerence.....	165

[SENSe:]TRACe:MEASurement:DEFine:PULSe:ESTimation:LENgth <Length>

Parameters:

<Length>	percentage
	Range: 1 to 100
	*RST: 75

Manual operation: See "Reference, Length, Offset" on page 85

[SENSe:]TRACe:MEASurement:DEFine:PULSe:ESTimation:OFFSet:LEFT <OffsetLeft>

The offset in seconds from the pulse rising edge at which the estimation range begins.

Parameters:

<OffsetLeft>	*RST: 0
	Default unit: S

Manual operation: See "Reference, Length, Offset" on page 85

[SENSe:]TRACe:MEASurement:DEFine:PULSe:ESTimation:OFFSet:RIGHT <OffsetRight>

The offset in seconds from the pulse falling edge at which the estimation range ends.

Parameters:

<OffsetRight>	*RST: 0
	Default unit: S

Manual operation: See "Reference, Length, Offset" on page 85

[SENSe:]TRACe:MEASurement:DEFine:PULSe:ESTimation:REFerence
<Reference>

Defines the reference for the measurement range definition. Depending on the selected reference type, an additional setting is available to define the range.

Parameters:

<Reference> CENTer | EDGE

CENTer

Defines a relative range around the center of the pulse. The range is defined by its **length** in percent of the pulse top.

EDGE

Defines the start and stop of the measurement range with respect to the pulse edges. The range is defined by a time **off-set** from the middle of the **rising edge** and a time offset from the middle of the **falling edge**.

*RST: CENTer

Manual operation: See "[Reference, Length, Offset](#)" on page 85

9.11 Configuring and performing sweeps

When the Pulse application is activated, a continuous sweep is performed automatically. However, you can stop and start a new measurement any time.

Furthermore, you can perform a sequence of measurements using the Sequencer (see "[Multiple Measurement Channels and Sequencer Function](#)" on page 12).

Useful commands for configuring sweeps described elsewhere:

- [\[SENSe:\] SWEep:TIME](#) on page 155
- [\[SENSe:\] SWEep:POINTs](#) on page 248

Remote commands exclusive to configuring sweeps:

ABORt.....	165
INITiate<n>:CONMeas.....	166
INITiate<n>:CONTinuous.....	167
INITiate<n>:[IMMEDIATE].....	167
INITiate:SEQUencer:ABORT.....	167
INITiate:SEQUencer:IMMEDIATE.....	168
INITiate:SEQUencer:MODE.....	168
[SENSe:]SWEep:COUNT.....	168
[SENSe:]SWEep:COUNT:CURREnt?.....	169
SYSTem:SEQUencer.....	169

ABORt

This command aborts the measurement in the current channel and resets the trigger system.

To prevent overlapping execution of the subsequent command before the measurement has been aborted successfully, use the *OPC? or *WAI command after ABOR and before the next command.

For details on overlapping execution see [Remote control via SCPI](#).

Note on blocked remote control programs:

If a sequential command cannot be completed, for example because a triggered sweep never receives a trigger, the remote control program will never finish and the remote channel to the R&S FSMR3000 is blocked for further commands. In this case, you must interrupt processing on the remote channel first in order to abort the measurement.

To do so, send a "Device Clear" command from the control instrument to the R&S FSMR3000 on a parallel channel to clear all currently active remote channels. Depending on the used interface and protocol, send the following commands:

- **Visa:** viClear()
- **GPIB:** ibclr()
- **RSIB:** RSDLLibclr()

Now you can send the ABORT command on the remote channel performing the measurement.

Example: ABOR; :INIT:IMM
Aborts the current measurement and immediately starts a new one.

Example: ABOR; *WAI
INIT:IMM
Aborts the current measurement and starts a new one once abortion has been completed.

Usage: Event

INITiate<n>:CONMeas

This command restarts a (single) measurement that has been stopped (using ABORT) or finished in single measurement mode.

The measurement is restarted at the beginning, not where the previous measurement was stopped.

As opposed to [INITiate<n>\[:IMMediate\]](#), this command does not reset traces in maxhold, minhold or average mode. Therefore it can be used to continue measurements using maxhold or averaging functions.

Suffix:

<n> irrelevant

Manual operation: See "[Continue Single Sweep](#)" on page 76

INITiate<n>:CONTinuous <State>

This command controls the measurement mode for an individual channel.

Note that in single measurement mode, you can synchronize to the end of the measurement with *OPC, *OPC? or *WAI. In continuous measurement mode, synchronization to the end of the measurement is not possible. Thus, it is not recommended that you use continuous measurement mode in remote control, as results like trace data or markers are only valid after a single measurement end synchronization.

For details on synchronization see [Remote control via SCPI](#).

Suffix:

<n> irrelevant

Parameters:

<State> ON | OFF | 0 | 1

ON | 1

Continuous measurement

OFF | 0

Single measurement

*RST: 1

Example:

INIT:CONT OFF

Switches the measurement mode to single measurement.

INIT:CONT ON

Switches the measurement mode to continuous measurement.

Manual operation: See "[Continuous Sweep / Run Cont](#)" on page 75

INITiate<n>[:IMMEDIATE]

This command starts a (single) new measurement.

With measurement count or average count > 0, this means a restart of the corresponding number of measurements. With trace mode MAXHold, MINHold and AVERage, the previous results are reset on restarting the measurement.

You can synchronize to the end of the measurement with *OPC, *OPC? or *WAI.

For details on synchronization see [Remote control via SCPI](#).

Suffix:

<n> irrelevant

Manual operation: See "[Single Sweep / Run Single](#)" on page 75

INITiate:SEQuencer:ABORT

This command stops the currently active sequence of measurements.

You can start a new sequence any time using [INITiate:SEQuencer:IMMEDIATE](#) on page 168.

Usage: Event

INITiate:SEQuencer:IMMEDIATE

This command starts a new sequence of measurements by the Sequencer.

Its effect is similar to the [INITiate<n>\[:IMMEDIATE\]](#) command used for a single measurement.

Before this command can be executed, the Sequencer must be activated (see [SYSTem:SEQUencer](#) on page 169).

Example:

```
SYST:SEQ ON  
Activates the Sequencer.  
INIT:SEQ:MODE SING  
Sets single sequence mode so each active measurement is performed once.  
INIT:SEQ:IMM  
Starts the sequential measurements.
```

INITiate:SEQuencer:MODE <Mode>

Defines the capture mode for the entire measurement sequence and all measurement groups and channels it contains.

Note: To synchronize to the end of a measurement sequence using *OPC, *OPC? or *WAI, use SINGLE Sequencer mode.

Parameters:

<Mode>

SINGLE

Each measurement group is started one after the other in the order of definition. All measurement channels in a group are started simultaneously and performed once. After *all* measurements are completed, the next group is started. After the last group, the measurement sequence is finished.

CONTinuous

Each measurement group is started one after the other in the order of definition. All measurement channels in a group are started simultaneously and performed once. After *all* measurements are completed, the next group is started. After the last group, the measurement sequence restarts with the first one and continues until it is stopped explicitly.

*RST: CONTinuous

[SENSe:]SWEEp:COUNt <SweepCount>

This command defines the number of measurements that the application uses to average traces.

See also [Chapter 4.5.1, "Trace statistics", on page 51.](#)

In continuous measurement mode, the application calculates the moving average over the average count.

In single measurement mode, the application stops the measurement and calculates the average after the average count has been reached.

Parameters:**<SweepCount>**

When you set a sweep count of 0 or 1, the R&S FSMR3 performs one single measurement in single measurement mode. In continuous measurement mode, if the sweep count is set to 0, a moving average over 10 measurements is performed.

Range: 0 to 200000

*RST: 0

<SweepCount>

If you set a sweep count of 0 or 1, the application performs one single sweep in single sweep mode.

In continuous sweep mode, if the average count is set to 0, a moving average over 10 sweeps is performed.

Range: 0 to 100000

*RST: 0

Example:

SWE:COUN 64

Sets the number of measurements to 64.

INIT:CONT OFF

Switches to single measurement mode.

INIT;*WAI

Starts a measurement and waits for its end.

Manual operation: See "[Sweep/Average Count](#)" on page 76

[SENSe:]SWEEp:COUNt:CURRent?

This query returns the current number of started sweeps or measurements. This command is only available if a sweep count value is defined and the instrument is in single sweep mode.

Return values:**<CurrentCount>****Usage:**

Query only

SYSTem:SEQuencer <State>

This command turns the Sequencer on and off. The Sequencer must be active before any other Sequencer commands (`INIT:SEQ...`) are executed, otherwise an error occurs.

A detailed programming example is provided in the "Operating Modes" chapter in the R&S FSMR3 User Manual.

Parameters:**<State>**

ON | OFF | 0 | 1

ON | 1

The Sequencer is activated and a sequential measurement is started immediately.

OFF | 0

The Sequencer is deactivated. Any running sequential measurements are stopped. Further Sequencer commands (INIT:SEQ...) are not available.

*RST: 0

Example:

SYST:SEQ ON

Activates the Sequencer.

INIT:SEQ:MODE SING

Sets single Sequencer mode so each active measurement is performed once.

INIT:SEQ:IMM

Starts the sequential measurements.

SYST:SEQ OFF

9.12 Configuring the results

Some evaluation methods require or allow for additional settings to configure the result display.

- [Selecting the pulse](#).....170
- [Defining the result range](#).....171
- [Configuring a parameter distribution](#).....172
- [Configuring a parameter spectrum](#).....179
- [Configuring a pulse-pulse spectrum](#).....186
- [Configuring a parameter trend](#).....188
- [Configuring a result range spectrum](#).....207
- [Configuring the statistics and parameter tables](#).....208
- [Configuring limit checks](#).....227
- [Configuring the Y-Axis scaling and units](#).....231

9.12.1 Selecting the pulse

The pulse traces (frequency, magnitude and pulse vs. time) always display the trace for one specific pulse, namely the currently selected pulse. To select a pulse, use the following command:

[SENSe:]TRACe:MEASurement:DEFIne:PULSe:SELected.....170

[SENSe:]TRACe:MEASurement:DEFIne:PULSe:SELected <PulseNumber>

Selects a particular pulse for which the traces, parameters and results are displayed, or queries the number of the selected pulse.

The pulse number is always relative to the current detection range, that is: pulse number 1 is the first pulse within the detection range in the capture buffer.

Query the number of the current or all detected pulses using [\[SENSe:\] PULSe:NUMBER?](#) on page 268 or [\[SENSe:\] PULSe:ID?](#) on page 268.

Note that this command causes an error if no measurement results are available.

Parameters:

<PulseNumber>	Range: 0 to number of detected pulses
	*RST: 0

Example:

```
SENS:TRAC:MEAS:DEF:PULS:SEL 2
```

9.12.2 Defining the result range

The result range determines which data is displayed on the screen (see also "Measurement range vs. result range vs. detection range" on page 15). This range applies to the pulse magnitude, frequency and phase vs time displays.

[SENSe:]TRACE:MEASurement:DEFine:RRANge:ALIGNment.....	171
[SENSe:]TRACE:MEASurement:DEFine:RRANge:AUTO.....	171
[SENSe:]TRACE:MEASurement:DEFine:RRANge:LENGth.....	172
[SENSe:]TRACE:MEASurement:DEFine:RRANge:OFFSet.....	172
[SENSe:]TRACE:MEASurement:DEFine:RRANge:REFERence.....	172

[SENSe:]TRACE:MEASurement:DEFine:RRANge:ALIGNment <Alignment>

Specifies the alignment with respect to the reference point used to define the result range.

Parameters:

<Alignment>	LEFT CENTer RIGHT
-------------	-----------------------

LEFT

The result range starts at the pulse center or selected edge.

CENTer

The result range is centered around the pulse center or selected edge.

RIGHT

The result range ends at the pulse center or selected edge.

*RST: CENTer

Manual operation: See "Alignment" on page 89

[SENSe:]TRACE:MEASurement:DEFine:RRANge:AUTO <State>

If enabled, the result range length is determined automatically according to the width of the selected pulse (see [SENSe:]TRACE:MEASurement:DEFine:PULSe:SElected on page 170).

Parameters:

<State>	OFF Switch the function off
	ON Switch the function on

ONCE

Execute the function once and then switch it off

*RST: ON

Manual operation: See "[Auto Scale Continuous \(All\)](#)" on page 86

See "[Auto Scale Once \(All\)](#)" on page 86

See "[Automatic Range Scaling](#)" on page 89

[SENSe:]TRACe:MEASurement:DEFIne:RRANge:LENGth <Length>**Parameters:**

<Length> *RST: 30 us
Default unit: S

Manual operation: See "[Length](#)" on page 89

[SENSe:]TRACe:MEASurement:DEFIne:RRANge:OFFSet <Offset>

The offset (in seconds) from the reference point at which the pulse result range is aligned.

Parameters:

<Offset> *RST: 0
Default unit: S

Manual operation: See "[Offset](#)" on page 89

[SENSe:]TRACe:MEASurement:DEFIne:RRANge:REFerence <Reference>

Specifies the reference point used to define the result range.

Parameters:

<Reference> **RISE**
The result range is defined in reference to the rising edge.

CENTer

The result range is defined in reference to the center of the pulse top.

FALL

The result range is defined in reference to the falling edge.

*RST: CENTer

Manual operation: See "[Result Range Reference Point](#)" on page 89

9.12.3 Configuring a parameter distribution

The parameter distribution evaluations allow you to visualize the number of occurrences for a specific parameter value within the current capture buffer. For each parameter distribution window you can configure which measured parameter is to be displayed.

Useful commands for configuring a parameter distribution described elsewhere:

- [LAYOUT:ADD\[:WINDOW\]?](#) on page 236

Remote commands exclusive to configuring a parameter distribution:

CALCulate<n>:DISTribution:EMODel.....	173
CALCulate<n>:DISTribution:FREQuency.....	174
CALCulate<n>:DISTribution:LLINes[:STATe].....	175
CALCulate<n>:DISTribution:NBINs.....	175
CALCulate<n>:DISTribution:PHASE.....	176
CALCulate<n>:DISTribution:POWer.....	176
CALCulate<n>:DISTribution:TIMing.....	178

CALCulate<n>:DISTribution:EMODel <XAxis>, <YAxis>

Configures the Parameter Distribution result display.

Suffix:

<n> 1..n
 Window

Setting parameters:

<XAxis>	RBPTime RLPTime RMPTime RHPTime RTPTime RLPLevel RMPLevel RHPLevel RTPLevel FBPTime FLPTime FMPTime FHPTime FTPTime FLPLevel FMPLevel FHPLevel FTPLevel

	*RST: COUNT
Usage:	Setting only
Manual operation:	See " X-Axis " on page 92

CALCulate<n>:DISTribution:LLINes[:STATe] <State>

Hides or shows the limit lines in the selected Parameter Trend or Parameter Distribution result display.

Note that this function only has an effect on the visibility of the lines in the graphical displays, it does not affect the limit check in general or the display of the limit check results in the table displays.

Suffix:

<n> 1..n
[Window](#)

Parameters:

<State> ON | OFF | 1 | 0
*RST: 1

Example: CALC:DIST:LLIN ON

Manual operation: See "[Display Limit Lines](#)" on page 93

CALCulate<n>:DISTribution:NBINs <# bins>

This command sets the number of bins used to calculate the histogram

Suffix:

<n> 1..n
[Window](#)

Parameters:

<# bins> Range: 1 to 1000
*RST: 100

Manual operation: See "[Histogram Bins](#)" on page 93

CALCulate<n>:DISTribution:PHASe <XAxis>, <YAxis>

Configures the Parameter Distribution result display.

Suffix:

<n> 1..n
 Window

Setting parameters:

<XAxis> POINt | PPPHase | RERRor | PERRor | DEViation
 Pulse parameter to be displayed on the x-axis. For a description of the available parameters see [Chapter 3.1.4, "Phase parameters", on page 24](#).
POINt
Pulse phase at measurement point
PPPHase
Pulse-Pulse Phase Difference
RERRor
Phase Error (RMS)
PERRor
Phase Error (Peak)
DEViation

9.12.4 Configuring a parameter spectrum

The parameter spectrum evaluations allow you to visualize the spectrum of results for a specific parameter for all measured pulses within the current capture buffer. For each parameter spectrum window you can configure which measured parameter is to be displayed.

Useful commands for configuring a parameter spectrum described elsewhere:

- [LAYOUT:ADD\[:WINDOW\]?](#) on page 236

Remote commands exclusive to configuring a parameter spectrum:

CALCulate<n>:PSPectrum:AUTO	179
CALCulate<n>:PSPectrum:BLOCKsize	180
CALCulate<n>:PSPectrum:EMODel	180
CALCulate<n>:PSPectrum:FREQuency	181

CALCulate<n>:PSPectrum:GTHreshold <GapThreshold>

Defines the minimum time that must pass before a gap is detected as such for Pulse-to-Pulse Spectrum displays.

Suffix:

<n> 1..n
 Window

Parameters:

<GapThreshold> Range: minimum spacing between pulses to meas time
 Default unit: S

Manual operation: See "[Gap Threshold](#)" on page 95

CALCulate<n>:PSPectrum:MAXFrequency <MaxFrequency>

Defines the maximum frequency span for which the Pulse-to-Pulse Spectrum is calculated. Internally, the span is limited by the number of possible interpolation samples (100 000).

Suffix:

<n> 1..n
 Window

Parameters:

<MaxFrequency> Range: >0 to 1/10 of sample rate
 Default unit: HZ

Manual operation: See "[Maximum Frequency](#)" on page 95

CALCulate<n>:PSPectrum:PHASe <Param>

Configures the Parameter Spectrum result display.

Suffix:

9.12.5 Configuring a pulse-pulse spectrum

The pulse-to-pulse spectrum evaluation allows you to visualize the spectrum of I and Q-based results for all measured pulses within the current capture buffer.

Useful commands for configuring a pulse-to-pulse spectrum distribution described elsewhere:

- [LAYOut:ADD\[:WINDOW\]?](#) on page 236

Remote commands exclusive to configuring a pulse-to-pulse spectrum:

CALCulate<n>:PPSPectrum:AUTO	186
CALCulate<n>:PPSPectrum:GTHreshold	186
CALCulate<n>:PPSPectrum:MAXFrequency	187
CALCulate<n>:PPSPectrum:RBW?	187
CALCulate<n>:PPSPectrum:STHreshold	187
CALCulate<n>:PPSPectrum:WINDOW	187

CALCulate<n>:PPSPectrum:AUTO <State>

Enables or disables automatic configuration for Pulse-to-Pulse Spectrum displays. If enabled, the commands for individual settings are not available.

Suffix:

<n> 1..n
 [Window](#)

Parameters:

<State>	ON OFF 0 1
	OFF 0
	Switches the function off
	ON 1
	Switches the function on
*RST:	0

Example:

`CALC:PPSP:AUTO OFF`

CALCulate<n>:PPSPectrum:GTHreshold <GapThreshold>

Defines the minimum time that must pass before a gap is detected as such.

Suffix:

<n> 1..n
 [Window](#)

Parameters:

<GapThreshold>	Range: minimum spacing between pulses to meas time
	Default unit: S

Example:

`CALC:PPSP:GTHR 100us`

CALCulate<n>:PPSPectrum:MAXFrequency <MaxFrequency>

Defines the maximum frequency span for which the Spectrum is calculated. Internally, the span is limited by the number of possible interpolation samples (100 000).

Suffix:

<n> 1..n
 Window

Parameters:

<MaxFrequency> Range: >0 to 1/10 of sample rate
 Default unit: HZ

Example:

CALC:PPSP:MAXF 10000Hz

CALCulate<n>:PPSPectrum:RBW?

Queries the resulting resolution bandwidth for the spectrum. Depends on the block size (see [CALCulate<n>:PSpectrum:BLOCKsize](#) on page 180).

Suffix:

<n> 1..n
 Window

Return values:

<RBW>

Example:

CALC:PPSP:RBW?

Usage:

Query only

CALCulate<n>:PPSPectrum:STHreshold <Threshold>

Defines the minimum section size. Sections that are smaller than the threshold are ignored and considered to be part of the detected gap.

Suffix:

<n> 1..n
 Window

Parameters:

<Threshold> Minimum section size as a percentage of the block size (see [CALCulate<n>:PSpectrum:BLOCKsize](#) on page 180)

Range: 0 to 100
*RST: 50

Example:

CALC:PPSP:STHR 0.1

CALCulate<n>:PPSPectrum:WINDOW <WindowType>

Defines the used FFT window type for pulse-to-pulse spectrum displays.

Suffix:

<n> 1..n
[Window](#)

Setting parameters:

<WindowType> RECTangle | BARTlett | HAMMING | HANNing | BLACKman
 *RST: BLACKman

Example: CALC:PPSP:WIND BART

9.12.6 Configuring a parameter trend

The parameter trend evaluations allow you to visualize changes in a specific parameter for all measured pulses within the current capture buffer. For each parameter trend window you can configure which measured parameter is to be displayed.

Useful commands for configuring a parameter trend described elsewhere:

- [LAYout:ADD\[:WINDOW\]?](#) on page 236

Remote commands exclusive to configuring a parameter trend:

CALCulate<n>:TRENd:DSTYle.....	188
CALCulate<n>:TRENd:EMODel.....	189

9.12.7 Configuring a result range spectrum

The following commands determine the FFT parameters for spectrum calculation.

CALCulate<n>:RRSPectrum:WINDOW.....	207
CALCulate<n>:RRSPectrum:AUTO.....	208
CALCulate<n>:RRSPectrum:RBW.....	208

CALCulate<n>:RRSPectrum:WINDOW <WindowType>

Defines the RBW for the Result Range Spectrum.

The same window types are available as for Parameter Spectrum displays (see "Window functions" on page 47).

Suffix:

<n> 1..n
Window

Setting parameters:

<WindowType> RECTangle | BARTlett | HAMMING | HANNing | BLACKman

Manual operation: See "Window Type" on page 90

CALCulate<n>:RRSPectrum:AUTO <State>

If activated, the optimal RBW for the Result Range Spectrum is selected automatically.

Suffix:

<n> 1..n
 Window

Parameters:

<State>	ON OFF 0 1
	OFF 0
	Switches the function off
	ON 1
	Switches the function on
*RST:	0

Manual operation: See "[RBW Auto](#)" on page 91

CALCulate<n>:RRSPectrum:RBW <RBW>

Defines the resolution bandwidth for the Result Range Spectrum.

Suffix:

<n> 1..n
 Window

Parameters:

<RBW>	*RST: 1000
	Default unit: Hz

Manual operation: See "[ResBW Manual](#)" on page 90

9.12.8 Configuring the statistics and parameter tables

The following commands select which parameters are displayed in the Pulse Statistics and Pulse Results evaluation.

For details on the individual parameters see [Chapter 3.1, "Pulse parameters"](#), on page 15.

If enabled, the Rise High Point Level is included in the result tables.

Suffix:

<n> 1..n
 [Window](#)

Parameters:

<State> ON | OFF | 1 | 0
 *RST: 0

Manual operation: See "[Rise High Point Level](#)" on page 28

CALCulate<n>:TABLE:EMODel:RHPTime <State>

If enabled, the Rise High Point Time is included in the result tables.

Suffix:

<n> 1..n
 [Window](#)

Parameters:

<State> ON | OFF | 1 | 0
 *RST: 0

Manual operation: See "[Rise High Point Time](#)" on page 27

CALCulate<n>:TABLE:EMODel:RLPLevel <State>

If enabled, the Rise Low Point Level is included in the result tables.

Suffix:

<n> 1..n
 [Window](#)

Parameters:

<State> ON | OFF | 1 | 0
 *RST: 0

Manual operation: See "[Rise Low Point Level](#)" on page 27

CALCulate<n>:TABLE:EMODel:RLPTime <State>

If enabled, the Rise Low Point Time is included in the result tables.

Suffix:

<n> 1..n
Window

Parameters:

<State> ON | OFF | 1 | 0
*RST: 0

Manual operation: See "[Rise Low Point Time](#)" on page 27

CALCulate<n>:TABLE:EMODel:RMPLevel <State>

If enabled, the Rise Mid Point Level is included in the result tables.

Suffix:

<n> 1..n
Window

Parameters:

<State> ON | OFF | 1 | 0
*RST: 0

Manual operation: See "[Rise Mid Point Level](#)" on page 27

CALCulate<n>:TABLE:EMODel:RMPTime <State>

If enabled, the Rise Mid Point Time is included in the result tables.

Suffix:

<n> 1..n
Window

Parameters:

<State> ON | OFF | 1 | 0
*RST: 0

Manual operation: See "[Rise Mid Point Time](#)" on page 27

CALCulate<n>:TABLE:EMODel:RTPLevel <State>

If enabled, the Rise Top Point Level is included in the result tables.

Suffix:

<n> 1..n
Window

Parameters:

<State> ON | OFF | 1 | 0
*RST: 0

Manual operation: See "[Rise Top Point Level](#)" on page 28

CALCulate<n>:TABLE:EMODel:RTPTime <State>

If enabled, the Rise Top Point Time is included in the result tables.

Suffix:

<n> 1..n
 Window

Parameters:

<State> ON | OFF | 1 | 0
 *RST: 0

Manual operation: See "[Rise Top Point Time](#)" on page 27

CALCulate<n>:TABLE:FREQuency:ALL[:STATe] <State>

If enabled, all frequency parameters are included in the result tables.

Suffix:

<n> 1..n
 Window

Setting parameters:

<State> ON | OFF | 1 | 0
 *RST: 0

Usage: Setting only

CALCulate<n>:TABLE:FREQuency:CRATe <State>

If enabled, the chirp rate (per μ s) is included in the result tables.

Suffix:

<n> 1..n
 Window

Parameters:

<State> ON | OFF | 1 | 0
 *RST: 0

Manual operation: See "[Chirp Rate](#)" on page 24

CALCulate<n>:TABLE:FREQuency:DEViation <State>

If enabled, the frequency deviation is included in the result tables.

Suffix:

<n> 1..n
 Window

Parameters:

<State> ON | OFF | 1 | 0
 *RST: 0

Manual operation: See "[Frequency Deviation](#)" on page 24

CALCulate<n>:TABLE:FREQuency:PERRor <State>

If enabled, the peak frequency error is included in the result tables.

Suffix:

<n> 1..n
Window

Parameters:

<State> ON | OFF | 1 | 0
*RST: 0

Manual operation: See "[Frequency Error \(Peak\)](#)" on page 23

CALCulate<n>:TABLE:FREQuency:POINT <State>

If enabled, the frequency at the measurement point is included in the result tables.

Suffix:

<n> 1..n
Window

Parameters:

<State> ON | OFF | 1 | 0
*RST: 1

Manual operation: See "[Frequency](#)" on page 23

CALCulate<n>:TABLE:FREQuency:PPFREquency <State>

If enabled, the Pulse-Pulse Frequency Difference is included in the result tables.

Suffix:

<n> 1..n
Window

Parameters:

<State> ON | OFF | 1 | 0
*RST: 0

Manual operation: See "[Pulse-Pulse Frequency Difference](#)" on page 23

CALCulate<n>:TABLE:FREQuency:RERRor <State>

If enabled, the RMS frequency error is included in the result tables.

Suffix:

<n> 1..n
Window

Parameters:

<State> ON | OFF | 1 | 0
 *RST: 0

Manual operation: See "[Frequency Error \(RMS\)](#)" on page 23

CALCulate<n>:TABLE:PHASE:ALL[:STATe] <State>

If enabled, all phase parameters are included in the result tables.

Suffix:

<n> 1..n
 [Window](#)

Setting parameters:

<State> ON | OFF | 1 | 0
 *RST: 0

Usage: Setting only

CALCulate<n>:TABLE:PHASE:DEViation <State>

If enabled, the Phase Deviation is included in the result tables.

Suffix:

<n> 1..n
 [Window](#)

Parameters:

<State> ON | OFF | 1 | 0
 *RST: 0

Manual operation: See "[Phase Deviation](#)" on page 25

CALCulate<n>:TABLE:PHASE:PERRor <State>

If enabled, the Phase Error (Peak) is included in the result tables.

Suffix:

<n> 1..n
 [Window](#)

Parameters:

<State> ON | OFF | 1 | 0
 *RST: 0

Manual operation: See "[Phase Error \(Peak\)](#)" on page 25

CALCulate<n>:TABLE:PHASE:POINt <State>

If enabled, the phase at the measurement point is included in the result tables.

Suffix:

<n> 1..n
Window

Parameters:

<State> ON | OFF | 1 | 0
*RST: 1

Manual operation: See "[Phase](#)" on page 24

CALCulate<n>:TABLE:PHASE:PPPHase <State>

If enabled, the Pulse-Pulse Phase Difference is included in the result tables.

Suffix:

<n> 1..n
Window

Parameters:

<State> ON | OFF | 1 | 0
*RST: 0

Manual operation: See "[Pulse-Pulse Phase Difference](#)" on page 24

CALCulate<n>:TABLE:PHASE:RERRor <State>

If enabled, the Phase Error (RMS) is included in the result tables.

Suffix:

<n> 1..n
Window

Parameters:

<State> ON | OFF | 1 | 0
*RST: 0

Manual operation: See "[Phase Error \(RMS\)](#)" on page 25

CALCulate<n>:TABLE:POWer:ADRoop:DB <State>

If enabled, the Droop in dB is included in the result tables.

Suffix:

<n> 1..n
Window

Parameters:

<State> ON | OFF | 1 | 0
*RST: 0

Manual operation: See "[Droop](#)" on page 21

CALCulate<n>:TABLE:POWer:ADRoop[:PERCent] <State>

If enabled, the droop in percent is included in the result tables.

Suffix:

<n> 1..n
 Window

Parameters:

<State> ON | OFF | 1 | 0
 *RST: 0

Manual operation: See "[Droop](#)" on page 21

CALCulate<n>:TABLE:POWer:ALL[:STATe] <State>

If enabled, all power parameters are included in the result tables.

Suffix:

<n> 1..n

Setting parameters:

<State> ON | OFF | 1 | 0
 *RST: 0

Usage: Setting only

CALCulate<n>:TABLE:POWer:AMPLitude <State>

If enabled, the pulse amplitude is included in the result tables.

Suffix:

<n> 1..n
 Window

Parameters:

<State> ON | OFF | 1 | 0
 *RST: 0

Manual operation: See "[Pulse Amplitude](#)" on page 20

CALCulate<n>:TABLE:POWer:AMPLitude:I <State>

If enabled, the in-phase amplitude is included in the result tables.

Suffix:

<n> 1..n
 Window

Parameters:

<State> ON | OFF | 1 | 0
 *RST: 0

Manual operation: See "[In-Phase Amplitude/Quadrature Amplitude](#)" on page 20

CALCulate<n>:TABLE:POWer:AMPLitude:Q <State>

If enabled, the quadrature amplitude is included in the result tables.

Suffix:

<n> 1..n
 Window

Parameters:

<State> ON | OFF | 1 | 0
 *RST: 0

Manual operation: See "[In-Phase Amplitude/Quadrature Amplitude](#)" on page 20

CALCulate<n>:TABLE:POWer:AVG <State>

If enabled, the average Tx power is included in the result tables.

Suffix:

<n> 1..n
 Window

Parameters:

<State> ON | OFF | 1 | 0
 *RST: 1

Manual operation: See "[Average Tx Power](#)" on page 20

CALCulate<n>:TABLE:POWer:BASE <State>

If enabled, the base power is included in the result tables.

Suffix:

<n> 1..n
 Window

Parameters:

<State> ON | OFF | 1 | 0
 *RST: 0

Manual operation: See "[Base Power](#)" on page 19

CALCulate<n>:TABLE:POWer:MAX <State>

If enabled, the maximum Tx power is included in the result tables.

Suffix:

<n> 1..n
 Window

Parameters:

<State> ON | OFF | 1 | 0
 *RST: 0

Manual operation: See "[Peak Power](#)" on page 21

CALCulate<n>:TABLE:POWer:MIN <State>

If enabled, the minimum Tx power is included in the result tables.

Suffix:

<n> 1..n
Window

Parameters:

<State> ON | OFF | 1 | 0
*RST: 0

Manual operation: See "[Minimum Power](#)" on page 20

CALCulate<n>:TABLE:POWer:ON <State>

If enabled, the average ON power is included in the result tables.

Suffix:

<n> 1..n
Window

Parameters:

<State> ON | OFF | 1 | 0
*RST: 1

Manual operation: See "[Average ON Power](#)" on page 20

CALCulate<n>:TABLE:POWer:OVERshoot:DB <State>

If enabled, the overshoot in dB is included in the result tables.

Suffix:

<n> 1..n
Window

Parameters:

<State> ON | OFF | 1 | 0
*RST: 0

Manual operation: See "[Overshoot](#)" on page 22

CALCulate<n>:TABLE:POWer:OVERshoot[:PERCent] <State>

If enabled, the overshoot in percent is included in the result tables.

Suffix:

<n> 1..n
Window

Parameters:

<State> ON | OFF | 1 | 0
 *RST: 0

Manual operation: See "[Overshoot](#)" on page 22

CALCulate<n>:TABLE:POWer:PAVG <State>

If enabled, the Peak-to-Average Tx Power Ratio is included in the result tables.

Suffix:

<n> 1..n
 [Window](#)

Parameters:

<State> ON | OFF | 1 | 0
 *RST: 0

Manual operation: See "[Peak-to-Average Tx Power Ratio](#)" on page 21

CALCulate<n>:TABLE:POWer:PMIN <State>

If enabled, the Peak-to-Min Power Ratio is included in the result tables.

Suffix:

<n> 1..n
 [Window](#)

Parameters:

<State> ON | OFF | 1 | 0
 *RST: 0

Manual operation: See "[Peak-to-Min Power Ratio](#)" on page 21

CALCulate<n>:TABLE:POWer:POINt <State>

If enabled, the power at the measurement point is included in the result tables.

Suffix:

<n> 1..n
 [Window](#)

Parameters:

<State> ON | OFF | 1 | 0
 *RST: 0

Manual operation: See "[Power \(at Point\)](#)" on page 22

CALCulate<n>:TABLE:POWer:POON <State>

If enabled, the Peak-to-Avg ON Power Ratio is included in the result tables.

Suffix:

<n> 1..n
[Window](#)

Parameters:

<State> ON | OFF | 1 | 0
*RST: 0

Manual operation: See "[Peak-to-Avg ON Power Ratio](#)" on page 21

CALCulate<n>:TABLE:POWer:PPRatio <State>

If enabled, the Pulse-to-Pulse Power Difference is included in the result tables.

Suffix:

<n> 1..n
[Window](#)

Parameters:

<State> ON | OFF | 1 | 0
*RST: 0

Manual operation: See "[Pulse-to-Pulse Power Ratio](#)" on page 22

CALCulate<n>:TABLE:POWer:RIPPLe:DB <State>

If enabled, the ripple in dB is included in the result tables.

Suffix:

<n> 1..n
[Window](#)

Parameters:

<State> ON | OFF | 1 | 0
*RST: 0

Manual operation: See "[Ripple](#)" on page 22

CALCulate<n>:TABLE:POWer:RIPPLe[:PERCent] <State>

If enabled, the ripple in percent is included in the result tables.

Suffix:

<n> 1..n
[Window](#)

Parameters:

<State> ON | OFF | 1 | 0
*RST: 0

Manual operation: See "[Ripple](#)" on page 22

CALCulate<n>:TABLE:POWer:TOP <State>

If enabled, the Top power is included in the result tables.

Suffix:

<n> 1..n
 Window

Parameters:

<State> ON | OFF | 1 | 0
 *RST: 0

Manual operation: See "[Top Power](#)" on page 19

CALCulate<n>:TABLE:TIMing:ALL[:STATe] <State>

If enabled, all timing parameters are included in the result tables.

Suffix:

<n> 1..n
 Window

Setting parameters:

<State> ON | OFF | 1 | 0
 *RST: 0

Usage: Setting only

CALCulate<n>:TABLE:TIMing:DCYCle <State>

If enabled, the duty cycle (in %) is included in the result tables.

Suffix:

<n> 1..n
 Window

Parameters:

<State> ON | OFF | 1 | 0
 *RST: 1

Manual operation: See "[Duty Cycle \(%\)](#)" on page 18

CALCulate<n>:TABLE:TIMing:DRATio <State>

If enabled, the duty ratio (in dB) is included in the result tables.

Suffix:

<n> 1..n
 Window

Parameters:

<State> ON | OFF | 1 | 0
 *RST: 0

Manual operation: See "[Duty Ratio](#)" on page 18

CALCulate<n>:TABLE:TIMing:FALL <State>

If enabled, the fall time is included in the result tables.

Suffix:

<n> 1..n
Window

Parameters:

<State> ON | OFF | 1 | 0
*RST: 0

Manual operation: See "[Fall Time](#)" on page 17

CALCulate<n>:TABLE:TIMing:OFF <State>

If enabled, the "OFF" time is included in the result tables.

Suffix:

<n> 1..n
Window

Parameters:

<State> ON | OFF | 1 | 0
*RST: 0

Manual operation: See "[Off Time](#)" on page 18

CALCulate<n>:TABLE:TIMing:PRF <State>

If enabled, the pulse repetition frequency is included in the result tables.

Suffix:

<n> 1..n
Window

Parameters:

<State> ON | OFF | 1 | 0
*RST: 0

Manual operation: See "[Pulse Repetition Frequency \(Hz\)](#)" on page 19

CALCulate<n>:TABLE:TIMing:PRI <State>

If enabled, the pulse repetition interval is included in the result tables.

Suffix:

<n> 1..n
Window

Parameters:

<State> ON | OFF | 1 | 0
 *RST: 1

Manual operation: See "[Pulse Repetition Interval](#)" on page 18

CALCulate<n>:TABLE:TIMing:PWIDth <State>

If enabled, the pulse width is included in the result tables.

Suffix:

<n> 1..n
 [Window](#)

Parameters:

<State> ON | OFF | 1 | 0
 *RST: 1

Manual operation: See "[Pulse Width \(ON Time\)](#)" on page 18

CALCulate<n>:TABLE:TIMing:RISE <State>

If enabled, the rise time is included in the result tables.

Suffix:

<n> 1..n
 [Window](#)

Parameters:

<State> ON | OFF | 1 | 0
 *RST: 1

Manual operation: See "[Rise Time](#)" on page 17

CALCulate<n>:TABLE:TIMing:SETTling <State>

If enabled, the settling time is included in the result tables.

Suffix:

<n> 1..n
 [Window](#)

Parameters:

<State> ON | OFF | 1 | 0
 *RST: 0

Manual operation: See "[Settling Time](#)" on page 17

CALCulate<n>:TABLE:TIMing:TStamp <State>

If enabled, the timestamp is included in the result tables.

Suffix:

<n>	1..n
	Window

Parameters:

<State>	ON OFF 1 0
*RST:	0

Manual operation: See "[Timestamp](#)" on page 17

9.12.9 Configuring limit checks

For each parameter in the result tables you can activate a limit check and define the valid value ranges. For details see "[Pulse Results](#)" on page 37.

Useful commands for configuring limit checks described elsewhere:

- [CALCulate<n>:DISTribution:LLINes\[:STATe\]](#) on page 175
- [CALCulate<n>:TRENd:LLINes\[:STATe\]](#) on page 196

For commands required to retrieve the results of the limit check for individual parameters see [Chapter 9.16.4, "Retrieving limit results"](#), on page 319.

Remote commands exclusive to configuring limit checks:

```
CALCulate<n>:TABLE:<ParameterGroup>:<Parameter>:LIMIT:STATe <State>

```

CALCulate<n>:TABLE:POWer:ALL:LIMit:STATe <State>
CALCulate<n>:TABLE:TIMing:ALL:LIMit:STATe <State>

Activates or deactivates a limit check for all parameters in the selected parameter group.

Suffix:

<n> 1..n

Setting parameters:

<State>	ON OFF 1 0
	*RST: 0

Usage: Setting only

CALCulate<n>:TABLE:ALL:LIMit:STATe <State>

Activates or deactivates a limit check for all parameters in all parameter groups.

Suffix:

<n>	1..n
	Window

Setting parameters:

<State>	ON OFF 1 0
	*RST: 0

Usage: Setting only

Manual operation: See "[Deactivating all limit checks for all parameter groups](#)" on page 99

CALCulate<n>:TABLE:TIming:TStamp:LIMit <LowerLimit>, <UpperLimit>

```

Defines the valid value range for the limit check for the selected parameter if limit check is active ([CALCulate<n>:TABLE:<ParameterGroup>:<Parameter>:LIMIT:STATEON](#)).

For details on the individual parameters see [Chapter 3.1, "Pulse parameters"](#), on page 15.

Suffix:

<n> 1..n

Parameters:

<LowerLimit> Lower limit of the valid value range.

Default unit: S

<UpperLimit> Upper limit of the valid value range.

Default unit: S

9.12.10 Configuring the Y-Axis scaling and units

The scaling for the vertical axis is highly configurable, using either absolute or relative values. These commands are described here.

Useful commands for configuring scaling described elsewhere:

- [DISPlay \[:WINDOW<n>\] \[:SUBWindow<w>\]:TRACe<t>:Y\[:SCALe\]:RLEVel](#)
on page 144

Remote commands exclusive to scaling the y-axis

CALCulate<n>:UNIT:FREQuency.....	231
DISPlay[:WINDOW<n>]:TRACe<t>:X[:SCALe]:UNIT?.....	231
DISPlay[:WINDOW<n>][:SUBWindow<n>]:TRACe<t>:Y[:SCALe]:AUTO.....	232
DISPlay[:WINDOW<n>]:TRACe<t>:Y[:SCALe]:MAXimum.....	232
DISPlay[:WINDOW<n>]:TRACe<t>:Y[:SCALe]:MINimum.....	232
DISPlay[:WINDOW<n>][:SUBWindow<w>]:TRACe<t>:Y[:SCALe]:PDIvision.....	233
DISPlay[:WINDOW<n>][:SUBWindow<w>]:TRACe<t>:Y[:SCALe]:RPOSITION.....	233
DISPlay[:WINDOW<n>]:TRACe<t>:Y[:SCALe]:RVALue.....	234
DISPlay[:WINDOW<n>]:TRACe<t>:Y[:SCALe]:UNIT?.....	234
CALCulate<n>:UNIT:ANGLE.....	234
UNIT:ANGLE.....	234

CALCulate<n>:UNIT:FREQuency <Unit>

Switches between relative (default) and absolute frequency values. This setting applies to Pulse Frequency, Result Range Spectrum, Parameter Distribution and Parameter Trend result displays.

Suffix:<n> 1..n
[Window](#)**Parameters:**

<Unit> REL | ABS

Manual operation: See "[Frequency Scaling](#)" on page 102

DISPlay[:WINDOW<n>]:TRACe<t>:X[:SCALe]:UNIT?

This command reads the unit type currently configured for the X-axis

Suffix:

<n> 1..n
Window

<t> 1..n
Trace

Usage: Query only

DISPlay[:WINDOW<n>][:SUBWindow<n>]:TRACe<t>:Y[:SCALe]:AUTO <State>

If enabled, the Y-axis is scaled automatically according to the current measurement.

Suffix:

<n> Window

<w> subwindow
Not supported by all applications

<t> irrelevant

Parameters for setting and query:

<State> OFF

Switch the function off

ON

Switch the function on

ONCE

Execute the function once

*RST: ON

Manual operation: See "[Auto Scale Continuous \(All\)](#)" on page 86

See "[Auto Scale Once \(All\)](#)" on page 86

See "[Automatic Grid Scaling](#)" on page 100

See "[Auto Scale Once](#)" on page 100

DISPlay[:WINDOW<n>]:TRACe<t>:Y[:SCALe]:MAXimum <Value>

Defines the maximum value on the y-axis in the specified window.

Suffix:

<n> Window

<t> irrelevant

Parameters:

<Max> numeric value

Example: DISP:WIND2:TRAC:Y:SCAL:MAX 10

Manual operation: See "[Absolute Scaling \(Min/Max Values\)](#)" on page 101

DISPlay[:WINDOW<n>]:TRACe<t>:Y[:SCALe]:MINimum <Value>

Defines the minimum value on the y-axis in the specified window.

Suffix:

<n> [Window](#)

<t> irrelevant

Parameters:

<Min> numeric value

Example: DISP:WIND2:TRAC:Y:SCAL:MIN -90

Manual operation: See "[Absolute Scaling \(Min/Max Values\)](#)" on page 101

DISPlay[:WINDOW<n>][:SUBWindow<w>]:TRACe<t>:Y[:SCALe]:PDIvision <Value>

This remote command determines the grid spacing on the Y-axis for all diagrams, where possible.

In spectrum displays, for example, this command is not available.

Suffix:

<n> [Window](#)

<w> subwindow
Not supported by all applications

<t> irrelevant

Parameters:

<Value> numeric value WITHOUT UNIT (unit according to the result display)

Defines the range per division (total range = 10*<Value>)

*RST: depends on the result display

Default unit: DBM

Example: DISP:TRAC:Y:PDIV 10

Sets the grid spacing to 10 units (e.g. dB) per division

Manual operation: See "[Per Division](#)" on page 101

DISPlay[:WINDOW<n>][:SUBWindow<w>]:TRACe<t>:Y[:SCALe]:RPOSITION <Position>

This command defines the vertical position of the reference level on the display grid (for all traces).

The R&S FSMR3 adjusts the scaling of the y-axis accordingly.

Suffix:

<n> [Window](#)

<w> subwindow
Not supported by all applications

<t> irrelevant

Parameters:

<Position> 0 PCT corresponds to the lower display border, 100% corresponds to the upper display border.
*RST: 100 PCT = frequency display; 50 PCT = time display
Default unit: PCT

Example: DISP:TRAC:Y:RPOS 50PCT

Manual operation: See "[Ref Position](#)" on page 101

DISPlay[:WINDOW<n>]:TRACe<t>:Y[:SCALe]:RVALue <Value>

This command defines the reference value assigned to the reference position in the specified window. Separate reference values are maintained for the various displays.

Suffix:

<n> [Window](#)
<t> irrelevant

Parameters:

<Value> numeric value WITHOUT UNIT
Default unit: dBm

Manual operation: See "[Ref Value](#)" on page 101

DISPlay[:WINDOW<n>]:TRACe<t>:Y[:SCALe]:UNIT?

This command reads the unit type currently configured for the Y-axis

Suffix:

<n> 1..n
 [Window](#)
<t> 1..n
 [Trace](#)

Usage: Query only

CALCulate<n>:UNIT:ANGLE <Unit>**UNIT:ANGLE <Unit>****Parameters:**

<Unit> DEG | RAD

Manual operation: See "[Phase Unit](#)" on page 101

9.13 Configuring the result display

The following commands are required to configure the screen display in a remote environment. The tasks for manual operation are described in [Chapter 3, "Measurements and result displays", on page 15](#).

- [General window commands](#).....235
- [Working with windows in the display](#).....236

9.13.1 General window commands

The following commands are required to configure general window layout, independent of the application.

Note that the suffix <n> always refers to the window *in the currently selected channel* (see [INSTRument \[:SElect\]](#) on page 134).

DISPlay:FORMAT	235
DISPlay[:WINDOW<n>]:SIZE	235

DISPlay:FORMAT <Format>

This command determines which tab is displayed.

Parameters:

<Format>	SPLit Displays the MultiView tab with an overview of all active channels SINGle Displays the measurement channel that was previously focused. *RST: SING
----------	--

Example:

DISP:FORM SPL

DISPlay[:WINDOW<n>]:SIZE <Size>

This command maximizes the size of the selected result display window *temporarily*. To change the size of several windows on the screen permanently, use the [LAY: SPL](#) command (see [LAYout:SPLITter](#) on page 239).

Suffix:

<n>	Window
-----	------------------------

Parameters:

<Size>	LARGE Maximizes the selected window to full screen. Other windows are still active in the background. SMALL Reduces the size of the selected window to its original size. If more than one measurement window was displayed originally, these are visible again.
--------	---

*RST: SMALI

Example: DISP:WIND2:SIZE LARG

9.13.2 Working with windows in the display

The following commands are required to change the evaluation type and rearrange the screen layout for a channel as you do using the SmartGrid in manual operation. Since the available evaluation types depend on the selected application, some parameters for the following commands also depend on the selected channel.

Note that the suffix <n> always refers to the window *in the currently selected channel*.

(See [INSTrument \[:SElect\]](#) on page 134).

LAYOut:ADD[:WINDOW]?	236
LAYOut:CATalog[:WINDOW]?	238
LAYOut:IDENTify[:WINDOW]?	238
LAYOut:REMove[:WINDOW]	238
LAYOut:REPLace[:WINDOW]	239
LAYOut:SPLitter	239
LAYOut:WINDOW<n>:ADD?	241
LAYOut:WINDOW<n>:IDENTify?	241
LAYOut:WINDOW<n>:REMove	242
LAYOut:WINDOW<n>:REPLace	242
LAYOut:WINDOW<n>:TYPE	243

LAYOut:ADD[:WINDOW]? <WindowName>, <Direction>, <WindowType>

This command adds a window to the display in the active channel.

This command is always used as a query so that you immediately obtain the name of the new window as a result.

To replace an existing window, use the [LAYOut:REPLace\[:WINDOW\]](#) command.

Query parameters:

<WindowName>	String containing the name of the existing window the new window is inserted next to. By default, the name of a window is the same as its index. To determine the name and index of all active windows, use the LAYOut:CATalog[:WINDOW]? query.
<Direction>	LEFT RIGHT ABOVE BELOW Direction the new window is added relative to the existing window.
<WindowType>	text value Type of result display (evaluation method) you want to add. See the table below for available parameter values.

Return values:

<NewWindowName> When adding a new window, the command returns its name (by default the same as its number) as a result.

Example:

```
LAY:ADD? '1',LEFT,MTAB
```

Result:

```
'2'
```

Adds a new window named '2' with a marker table to the left of window 1.

Usage:

Query only

Manual operation:

See "[Magnitude Capture](#)" on page 30

See "[Marker Table](#)" on page 31

See "[Parameter Distribution](#)" on page 31

See "[Parameter Spectrum](#)" on page 32

See "[Parameter Trend](#)" on page 32

See "[Pulse Frequency](#)" on page 34

See "[Pulse I and Q](#)" on page 35

See "[Pulse Magnitude](#)" on page 35

See "[Pulse Phase](#)" on page 36

See "[Pulse Phase \(Wrapped\)](#)" on page 36

See "[Pulse Results](#)" on page 37

See "[Pulse-Pulse Spectrum](#)" on page 38

See "[Pulse Statistics](#)" on page 39

See "[Result Range Spectrum](#)" on page 40

For a detailed example, see [Chapter 9.19, "Programming example: pulse measurement"](#), on page 327.

Table 9-3: <WindowType> parameter values for Pulse application

Parameter value	Window type
MCAPture	"Magnitude Capture Buffer"
MTABle	"Marker Table"
PDIStribution	"Parameter Distribution"
PFREQUENCY	"Pulse Frequency"
PMAGnitude	"Pulse Magnitude"
PPHase	"Pulse Phase"
PPSPectrum	"Pulse-Pulse Spectrum"
PPWrapped	"Pulse phase, wrapped"
PRESults	"Pulse Results"
PSPectrum	"Parameter Spectrum"
PSTatistics	"Pulse Statistics"
PTRend	"Parameter Trend"
RRSPectrum	"Result Range Spectrum"

LAYOut:CATalog[:WINDOW]?

This command queries the name and index of all active windows in the active channel from top left to bottom right. The result is a comma-separated list of values for each window, with the syntax:

<WindowName_1>,<WindowIndex_1>..<WindowName_n>,<WindowIndex_n>

Return values:

<WindowName> string

Name of the window.

In the default state, the name of the window is its index.

<WindowIndex>

numeric value

Index of the window.

Example:

LAY:CAT?

Result:

'2',2,'1',1

Two windows are displayed, named '2' (at the top or left), and '1' (at the bottom or right).

Usage:

Query only

LAYOut:IDENtify[:WINDOW]? <WindowName>

This command queries the **index** of a particular display window in the active channel.

Note: to query the **name** of a particular window, use the [LAYout:WINDOW<n>:IDENtify?](#) query.

Query parameters:

<WindowName> String containing the name of a window.

Return values:

<WindowIndex> Index number of the window.

Example:

LAY:IDEN:WIND? '2'

Queries the index of the result display named '2'.

Response:

2

Usage:

Query only

LAYOut:REMove[:WINDOW] <WindowName>

This command removes a window from the display in the active channel.

Setting parameters:

<WindowName> String containing the name of the window. In the default state, the name of the window is its index.

Example:

LAY:REM '2'

Removes the result display in the window named '2'.

Usage: Setting only

LAYout:REPLace[:WINDOW] <WindowName>,<WindowType>

This command replaces the window type (for example from "Diagram" to "Result Summary") of an already existing window in the active channel while keeping its position, index and window name.

To add a new window, use the [LAYout:ADD\[:WINDOW\]? command](#).

Setting parameters:

<WindowName> String containing the name of the existing window.
By default, the name of a window is the same as its index. To determine the name and index of all active windows in the active channel, use the [LAYout:CATalog\[:WINDOW\]? query](#).

<WindowType> Type of result display you want to use in the existing window.
See [LAYout:ADD\[:WINDOW\]? on page 236](#) for a list of available window types.

Example: LAY:REPL:WIND '1',MTAB
Replaces the result display in window 1 with a marker table.

Usage: Setting only

LAYout:SPLitter <Index1>, <Index2>, <Position>

This command changes the position of a splitter and thus controls the size of the windows on each side of the splitter.

Compared to the [DISPLAY\[:WINDOW<n>\]:SIZE](#) on page 235 command, the `LAYout:SPLitter` changes the size of all windows to either side of the splitter permanently, it does not just maximize a single window temporarily.

Note that windows must have a certain minimum size. If the position you define conflicts with the minimum size of any of the affected windows, the command does not work, but does not return an error.

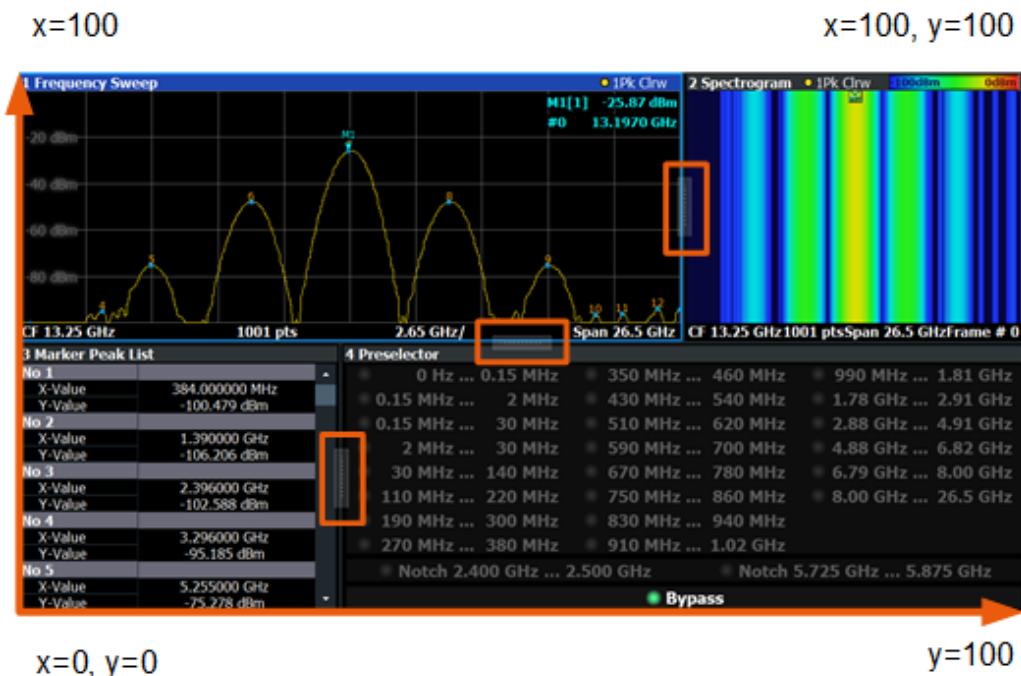

Figure 9-1: SmartGrid coordinates for remote control of the splitters

Setting parameters:

- <Index1> The index of one window the splitter controls.
- <Index2> The index of a window on the other side of the splitter.
- <Position> New vertical or horizontal position of the splitter as a fraction of the screen area (without channel and status bar and softkey menu).
The point of origin ($x = 0, y = 0$) is in the lower left corner of the screen. The end point ($x = 100, y = 100$) is in the upper right corner of the screen. (See [Figure 9-1](#).)
The direction in which the splitter is moved depends on the screen layout. If the windows are positioned horizontally, the splitter also moves horizontally. If the windows are positioned vertically, the splitter also moves vertically.
Range: 0 to 100
- Example:** `LAY:SPL 1,3,50`
Moves the splitter between window 1 ('Frequency Sweep') and 3 ("Marker Table") to the center (50%) of the screen, i.e. in the figure above, to the left.

Example:	<pre>LAY:SPL 1,4,70</pre> <p>Moves the splitter between window 1 ('Frequency Sweep') and 3 ("Marker Peak List") towards the top (70%) of the screen.</p> <p>The following commands have the exact same effect, as any combination of windows above and below the splitter moves the splitter vertically.</p> <pre>LAY:SPL 3,2,70 LAY:SPL 4,1,70 LAY:SPL 2,1,70</pre>
Usage:	Setting only

LAYout:WINDOW<n>:ADD? <Direction>,<WindowType>

This command adds a measurement window to the display. Note that with this command, the suffix <n> determines the existing window next to which the new window is added. Unlike [LAYout:ADD\[:WINDOW\]?](#), for which the existing window is defined by a parameter.

To replace an existing window, use the [LAYout:WINDOW<n>:REPLace](#) command.

This command is always used as a query so that you immediately obtain the name of the new window as a result.

Suffix:

<n>	Window
-----	--------

Query parameters:

<Direction>	LEFT RIGHT ABOVE BELOW
-------------	------------------------------

<WindowType>	Type of measurement window you want to add. See LAYout:ADD[:WINDOW]? on page 236 for a list of available window types.
--------------	---

Return values:

<NewWindowName>	When adding a new window, the command returns its name (by default the same as its number) as a result.
-----------------	---

Example:

LAY:WIND1:ADD? LEFT,MTAB

Result:

'2'

Adds a new window named '2' with a marker table to the left of window 1.
--

Usage:

Query only

LAYout:WINDOW<n>:IDENTify?

This command queries the **name** of a particular display window (indicated by the <n> suffix) in the active channel.

Note: to query the **index** of a particular window, use the [LAYout:IDENTify\[:WINDOW\]?](#) command.

Suffix:

<n>

Window

Return values:

<WindowName>

String containing the name of a window.

In the default state, the name of the window is its index.

Example:

LAY:WIND2:IDEN?

Queries the name of the result display in window 2.

Response:

'2'

Usage:

Query only

LAYOut:WINDOW<n>:REMove

This command removes the window specified by the suffix <n> from the display in the active channel.

The result of this command is identical to the [LAYout:REMove\[:WINDOW\]](#) command.

Suffix:

<n>

Window

Example:

LAY:WIND2:REM

Removes the result display in window 2.

Usage:

Event

LAYOut:WINDOW<n>:REPLace <WindowType>

This command changes the window type of an existing window (specified by the suffix <n>) in the active channel.

The effect of this command is identical to the [LAYout:REPLace\[:WINDOW\]](#) command.

To add a new window, use the [LAYout:WINDOW<n>:ADD?](#) command.

Suffix:

<n>

Window

Setting parameters:

<WindowType>

Type of measurement window you want to replace another one with.

See [LAYout:ADD\[:WINDOW\]?](#) on page 236 for a list of available window types.**Example:**

LAY:WIND2:REPL MTAB

Replaces the result display in window 2 with a marker table.

Usage:

Setting only

LAYout:WINDOW<n>:TYPE <WindowType>

Queries or defines the window type of the window specified by the index <n>. The window type determines which results are displayed. For a list of possible window types, see [LAYout:ADD\[:WINDOW\] ?](#) on page 236.

Note that this command is not available in all applications and measurements.

Suffix:

<n>	1..n
	Window

Parameters:

<WindowType>	
--------------	--

Example: LAY:WIND2:TYPE?

9.14 Configuring standard traces

Useful commands for configuring traces described elsewhere:

- [\[SENSe:\] SWEep:COUNT](#) on page 168

Remote commands exclusive to configuring traces

CALCulate<n>:TRACe<t>[:VALue]:PIAQ.....	243
DISPlay[:WINDOW<n>][:SUBWindow<w>]:TRACe<t>:MODE.....	244
DISPlay[:WINDOW<n>][:SUBWindow<w>]:TRACe<t>:MODE:HCONTinuous.....	245
DISPlay[:WINDOW<n>]:TRACe<t>:NORMalize:MODE.....	245
DISPlay[:WINDOW<n>]:TRACe<t>:NORMalize:PHASE.....	246
DISPlay[:WINDOW<n>][:SUBWindow<w>]:TRACe<t>[:STATe].....	246
[SENSe:][:WINDOW<n>]:DETector<t>[:FUNCtion].....	247
[SENSe:][:WINDOW<n>]:DETector<t>[:FUNCtion]:AUTO.....	247
[SENSe:]STATistic<n>:TYPE.....	248
[SENSe:]SWEep:POInTs.....	248

CALCulate<n>:TRACe<t>[:VALue]:PIAQ <Detector>

Defines which signal component (I/Q) is evaluated in which trace for the [Pulse I and Q](#) result display. By default, the I component is displayed by trace 1, while the Q component is displayed by trace 4.

This setting is not available for any other results displays.

Suffix:

<n>	1..n
	Window
<t>	1..n
	Trace

Parameters:

<Detector>	ITIMe QTImE
------------	---------------

ITIMe

The I component is evaluated by the selected trace.

QTIMe

The Q component is evaluated by the selected trace.

Example:

CALC2:TRAC2 QTIM

Trace 2 in window 2 evaluates the Q component of the signal.

DISPlay[:WINDOW<n>][:SUBWindow<w>]:TRACe<t>:MODE <Mode>

This command selects the trace mode. If necessary, the selected trace is also activated.

Suffix:

<n> [Window](#)

<w> subwindow

Not supported by all applications

<t> [Trace](#)

Parameters:

<Mode> [WRITe](#)

(default:) Overwrite mode: the trace is overwritten by each sweep.

AVERage

The average is formed over several sweeps. The "Sweep/Average Count" determines the number of averaging procedures.

MAXHold

The maximum value is determined over several sweeps and displayed. The R&S FSMR3 saves the sweep result in the trace memory only if the new value is greater than the previous one.

MINHold

The minimum value is determined from several measurements and displayed. The R&S FSMR3 saves the sweep result in the trace memory only if the new value is lower than the previous one.

VIEW

The current contents of the trace memory are frozen and displayed.

BLANK

Hides the selected trace.

*RST: Trace 1: WRITe, Trace 2-6: BLANK

Example:

```
INIT:CONT OFF
Switching to single sweep mode.
SWE:COUN 16
Sets the number of measurements to 16.
DISP:TRAC3:MODE WRIT
Selects clear/write mode for trace 3.
INIT;*WAI
Starts the measurement and waits for the end of the measurement.
```

Manual operation: See "[Trace Mode](#)" on page 110

DISPlay[:WINDOW<n>][:SUBWindow<w>]:TRACe<t>:MODE:HCONtinuous <State>

This command turns an automatic reset of a trace on and off after a parameter has changed.

The reset works for trace modes min hold, max hold and average.

Note that the command has no effect if critical parameters like the span have been changed to avoid invalid measurement results

Suffix:

<n>	Window
<w>	subwindow
<t>	Trace

Parameters:

<State>	ON OFF 0 1
	OFF 0
	Switches the function off
	ON 1
	Switches the function on

Example:

```
DISP:WIND:TRAC3:MODE:HCON ON
Switches off the reset function.
```

Manual operation: See "[Hold](#)" on page 111

DISPlay[:WINDOW<n>]:TRACe<t>:NORMalize:MODE <Mode>

Enables or disables normalization of the traces in reference to the measured pulse or a reference pulse. For details see [Chapter 4.5.2, "Normalizing traces"](#), on page 51.

This command is valid only for Magnitude Time, Frequency Time, Phase Time and Phase Time Wrapped result displays.

Suffix:

<n>	1..n
-----	------

<t> 1..n

Parameters:

<Mode> **OFF**

Traces are not normalized

MEASured

The value in the measurement point (that is: the value in the Pulse Results table) for each pulse in phase, amplitude or frequency is subtracted from the respective trace to normalize each trace to 0.

REFerence

The value in the measurement point (that is: the value in the Pulse Results table) for the *Reference Pulse* is subtracted from the respective trace to normalize the traces.

The reference pulse is defined using [\[SENSe:\]TRACe:MEASurement:DEFine:PULSe:REFerence:POSITION](#) on page 163 and [\[SENSe:\]TRACe:MEASurement:DEFine:PULSe:REFerence](#) on page 163.

*RST: OFF

Example: DISP:WIND2:TRAC:NORM:MODE MEAS

Manual operation: See "Normalization" on page 112

DISPlay[:WINDOW<n>]:TRACe<t>:NORMalize:PHASE <Phase>

Normalizes pulse phase traces to a specific phase value. For details see "Normalization of pulse phase traces" on page 54.

This command is valid only for Phase Time and Phase Time Wrapped result displays.

Suffix:

<n> 1..n
Window

<t> 1..n
irrelevant

Parameters:

<Phase> floating point value
Phase offset in degrees or radians
*RST: 0
Default unit: DEG

Example: DISP:WIND2:TRAC:NORM:PHAS 45

Manual operation: See "Phase Normalization" on page 102

DISPlay[:WINDOW<n>][:SUBWindow<w>]:TRACe<t>[:STATe] <State>

This command turns a trace on and off.

The measurement continues in the background.

Suffix:

<n>	Window
<w>	subwindow Not supported by all applications
<t>	Trace

Parameters:

<State>	ON OFF 0 1
	OFF 0
	Switches the function off

ON | 1

Switches the function on

Example: DISP:TRAC3 ON

Manual operation: See "[Trace 1/Trace 2/Trace 3/Trace 4/Trace 5/Trace 6](#)" on page 110
See "[Trace 1/ Trace 2/ Trace 3/ Trace 4 \(Softkeys\)](#)" on page 113

[SENSe:][WINDOW<n>:]DETector<t>[:FUNCTION] <Detector>

Defines the trace detector to be used for trace analysis.

Suffix:

<n>	Window
<t>	Trace

Example: DET POS

Sets the detector to "positive peak".

Manual operation: See "[Detector](#)" on page 111

[SENSe:][WINDOW<n>:]DETector<t>[:FUNCTION]:AUTO <State>

This command couples and decouples the detector to the trace mode.

Suffix:

<n>	Window
<t>	Trace

Parameters:

<State>	ON OFF 0 1
	*RST: 1

Example: DET:AUTO OFF

The selection of the detector is not coupled to the trace mode.

Manual operation: See "[Detector](#)" on page 111

[SENSe:]STATistic<n>:TYPE <TraceStatistic>**Suffix:**

<n> 1..n
 Window

Parameters:

<TraceStatistic> SEL | ALL

SEL

Only the selected pulse from each capture is included in the statistical evaluation of trace results. The pulse is selected using [\[SENSe:\]TRACe:MEASurement:DEFIne:PULSe:SElected](#) on page 170.

ALL

All measured pulses from each capture are included in the statistical evaluation of trace results.

Manual operation: See "Selected Pulse vs All Pulses" on page 112

[SENSe:]SWEep:POINts <SweepPoints>

Sets/queries the number of trace points to be displayed and used for statistical evaluation.

Parameters:

<SweepPoints>

Manual operation: See "Maximum number of trace points" on page 112

9.15 Working with markers

CALCulate<n>:DELTamarker<m>:LINK	251
CALCulate<n>:DELTamarker<ms>:LINK:TO:MARKer<md>	251
CALCulate<n>:DELTamarker<m>:MREFerence	252

CALCulate<n>:DELTamarker<m>[:STATe].....	252
CALCulate<n>:DELTamarker<m>:TRACe.....	253
CALCulate<n>:DELTamarker<m>:X.....	253

CALCulate<n>:MARKer<m>:AOFF

This command turns off all markers.

Suffix:

<n> [Window](#)

<m> [Marker](#)

Example:

CALC:MARK:AOFF

Switches off all markers.

Manual operation: See "[All Markers Off](#)" on page 105

CALCulate<n>:MARKer<ms>:LINK:TO:MARKer<md> <State>

This command links the normal source marker <ms> to any active destination marker <md> (normal or delta marker).

If you change the horizontal position of marker <md>, marker <ms> changes its horizontal position to the same value.

Suffix:

<n> [Window](#)

<ms> source marker, see [Marker](#)

<md> destination marker, see [Marker](#)

Parameters:

<State> ON | OFF | 0 | 1

OFF | 0

Switches the function off

ON | 1

Switches the function on

Example: CALC:MARK4:LINK:TO:MARK2 ON

Links marker 4 to marker 2.

Manual operation: See "[Linking to Another Marker](#)" on page 104

CALCulate<n>:MARKer<m>[:STATe] <State>

This command turns markers on and off. If the corresponding marker number is currently active as a delta marker, it is turned into a normal marker.

Suffix:

<n> [Window](#)

<m> Marker

Parameters:

<State> ON | OFF | 0 | 1

OFF | 0

Switches the function off

ON | 1

Switches the function on

Example:

CALC:MARK3 ON

Switches on marker 3.

Manual operation: See "[Marker State](#)" on page 103

See "[Marker Type](#)" on page 104

See "[Select Marker](#)" on page 105

CALCulate<n>:MARKer<m>:TRACe <Trace>

This command selects the trace the marker is positioned on.

Note that the corresponding trace must have a trace mode other than "Blank".

If necessary, the command activates the marker first.

Suffix:

<n> Window

<m> Marker

Parameters:

<Trace>

Example: //Assign marker to trace 1

CALC:MARK3:TRAC 2

Manual operation: See "[Assigning the Marker to a Trace](#)" on page 105

CALCulate<n>:MARKer<m>:X <Position>

This command moves a marker to a specific coordinate on the x-axis.

If necessary, the command activates the marker.

If the marker has been used as a delta marker, the command turns it into a normal marker.

Suffix:

<n> Window

<m> Marker

Parameters:

<Position> Numeric value that defines the marker position on the x-axis.
The unit depends on the result display.

Range: The range depends on the current x-axis range.

Default unit: Hz

Example: CALC:MARK2:X 1.7MHz
Positions marker 2 to frequency 1.7 MHz.

Manual operation: See "[Marker Table](#)" on page 31
See "[X-value](#)" on page 103

CALCulate<n>:DELTamarker<m>:AOFF

This command turns off *all* delta markers.

Suffix:
<n> [Window](#)

<m> irrelevant

Example: CALC:DELT:AOFF
Turns off all delta markers.

CALCulate<n>:DELTamarker<m>:LINK <State>

This command links delta marker <m> to marker 1.

If you change the horizontal position (x-value) of marker 1, delta marker <m> changes its horizontal position to the same value.

Suffix:
<n> [Window](#)
<m> [Marker](#)

Parameters:
<State> ON | OFF | 0 | 1
OFF | 0
Switches the function off
ON | 1
Switches the function on

Example: CALC:DELT2:LINK ON

Manual operation: See "[Linking to Another Marker](#)" on page 104

CALCulate<n>:DELTamarker<ms>:LINK:TO:MARKer<md> <State>

This command links the delta source marker <ms> to any active destination marker <md> (normal or delta marker).

Suffix:
<n> [Window](#)
<ms> source marker, see [Marker](#)
<md> destination marker, see [Marker](#)

Parameters:
<State> ON | OFF | 0 | 1

OFF | 0

Switches the function off

ON | 1

Switches the function on

Example:

CALC:DELT4:LINK:TO:MARK2 ON

Links the delta marker 4 to the marker 2.

Manual operation: See "[Linking to Another Marker](#)" on page 104

CALCulate<n>:DELTamarker<m>:MREFerence <Reference>

This command selects a reference marker for a delta marker other than marker 1.

The reference may be another marker or the fixed reference.

Suffix:

<n> [Window](#)

<m> [Marker](#)

Parameters:

<Reference> **1 to 16**

Selects markers 1 to 16 as the reference.

FIXed

Selects the fixed reference as the reference.

D1

Selects the deltamarker 1 as the reference.

Example:

CALC:DELT3:MREF 2

Specifies that the values of delta marker 3 are relative to marker 2.

Manual operation: See "[Reference Marker](#)" on page 104

CALCulate<n>:DELTamarker<m>[:STATe] <State>

This command turns delta markers on and off.

If necessary, the command activates the delta marker first.

No suffix at DELTamarker turns on delta marker 1.

Suffix:

<n> [Window](#)

<m> [Marker](#)

Parameters:

<State> **ON | OFF | 0 | 1**

OFF | 0

Switches the function off

ON | 1

Switches the function on

Example: CALC:DELT2 ON
Turns on delta marker 2.

Manual operation: See "Marker State" on page 103
See "Marker Type" on page 104
See "Select Marker" on page 105

CALCulate<n>:DELTamarker<m>:TRACe <Trace>

This command selects the trace a delta marker is positioned on.

Note that the corresponding trace must have a trace mode other than "Blank".

If necessary, the command activates the marker first.

Suffix:

<n> Window

<m> Marker

Parameters:

<Trace> Trace number the marker is assigned to.

Example: CALC:DELT2:TRAC 2
Positions delta marker 2 on trace 2.

CALCulate<n>:DELTamarker<m>:X <Position>

This command moves a delta marker to a particular coordinate on the x-axis.

If necessary, the command activates the delta marker and positions a reference marker to the peak power.

Suffix:

<n> Window

<m> Marker

Parameters:

<Position> Numeric value that defines the marker position on the x-axis.

Range: The value range and unit depend on the measurement and scale of the x-axis.

Example: CALC:DELT:X?
Outputs the absolute x-value of delta marker 1.

Manual operation: See "X-value" on page 103

9.15.2 General marker settings

CALCulate<n>:MARKer<m>:LINK.....	254
CALCulate<n>:DELTamarker<m>:LINK:TRENd.....	254
CALCulate<n>:MARKer<m>:LINK:TRENd.....	254

CALCulate<n>:MARKer<m>:PEXCursion.....	254
DISPlay[:WINDOW<n>]:MINFo[:STATe].....	255
DISPlay[:WINDOW<n>]:MTABle.....	255

CALCulate<n>:MARKer<m>:LINK <State>

This command defines whether the markers in all diagrams with the same x-axis are linked. If enabled, and you move one marker along the x-axis, all other markers are moved to the same x-axis position.

Suffix:

<m> irrelevant

<n> irrelevant

Parameters:

<State> ON | OFF | 1 | 0

*RST: 0

Example:

CALC2:MARK:LINK ON

Links all markers across all diagrams. The window selection 2 is irrelevant.

Manual operation: See "[Linked Markers Across Windows](#)" on page 107

CALCulate<n>:DELTAmarker<m>:LINK:TRENd <State>**CALCulate<n>:MARKer<m>:LINK:TRENd <State>**

If enabled, marker M1 in Parameter Trend displays is linked to the pulse selection. Thus, if you move the marker M1 to a different pulse, the [Pulse selection](#) is set to the same pulse, and vice versa.

This command requires the markers to be linked across all windows ([CALCulate<n>:MARKer<m>:LINK ON](#)). If the [CALCulate<n>:MARKer<m>:LINK:TRENd](#) command is enabled, the [CALCulate<n>:MARKer<m>:LINK](#) command is automatically also enabled, if necessary.

Suffix:

<n>, <m> irrelevant

Parameters:

<State> ON | OFF | 1 | 0

*RST: 0

Example:

CALC:MARK:LINK ON

CALC:MARK:LINK:TREN ON

Manual operation: See "[Link Trend M1 to Selected Pulse](#)" on page 107

CALCulate<n>:MARKer<m>:PEXCursion <Excursion>

This command defines the peak excursion (for *all* markers in *all* windows).

The peak excursion sets the requirements for a peak to be detected during a peak search.

The unit depends on the measurement.

Suffix:

<n> irrelevant

<m> irrelevant

Manual operation: See "[Peak Excursion](#)" on page 108

DISPlay[:WINDOW<n>]:MINFo[:STATe] <State>

This command turns the marker information in all diagrams on and off.

Suffix:

<n> irrelevant

Parameters:

<State> **ON | 1**
Displays the marker information in the diagrams.

OFF | 0

Hides the marker information in the diagrams.

*RST: 1

Example: DISP:MINF OFF

Hides the marker information.

Manual operation: See "[Marker Info](#)" on page 106

DISPlay[:WINDOW<n>]:MTABle <DisplayMode>

This command turns the marker table on and off.

Suffix:

<n> irrelevant

Parameters:

<DisplayMode> **ON | 1**
Turns on the marker table.
OFF | 0
Turns off the marker table.
AUTO
Turns on the marker table if 3 or more markers are active.
*RST: AUTO

Example: DISP:MTAB ON

Activates the marker table.

Manual operation: See "[Marker Table Display](#)" on page 106

9.15.3 Positioning the marker

This chapter contains remote commands necessary to position the marker on a trace.

● Positioning normal markers.....	256
● Positioning delta markers.....	258

9.15.3.1 Positioning normal markers

The following commands position markers on the trace.

CALCulate<n>:MARKer<m>:MAXimum:LEFT	256
CALCulate<n>:MARKer<m>:MAXimum:NEXT	256
CALCulate<n>:MARKer<m>:MAXimum[:PEAK]	256
CALCulate<n>:MARKer<m>:MAXimum:RIGHT	257
CALCulate<n>:MARKer<m>:MINimum:LEFT	257
CALCulate<n>:MARKer<m>:MINimum:NEXT	257
CALCulate<n>:MARKer<m>:MINimum[:PEAK]	257
CALCulate<n>:MARKer<m>:MINimum:RIGHT	257

CALCulate<n>:MARKer<m>:MAXimum:LEFT

This command moves a marker to the next positive peak.

The search includes only measurement values to the left of the current marker position.

Suffix:

<n>	Window
<m>	Marker

CALCulate<n>:MARKer<m>:MAXimum:NEXT

This command moves a marker to the next positive peak.

Suffix:

<n>	Window
<m>	Marker

CALCulate<n>:MARKer<m>:MAXimum[:PEAK]

This command moves a marker to the highest level.

If the marker is not yet active, the command first activates the marker.

Suffix:

<n>	Window
<m>	Marker

Manual operation: See "[Peak Search](#)" on page 109

CALCulate<n>:MARKer<m>:MAXimum:RIGHT

This command moves a marker to the next positive peak.

The search includes only measurement values to the right of the current marker position.

Prefix:

<n>	Window
<m>	Marker

CALCulate<n>:MARKer<m>:MINimum:LEFT

This command moves a marker to the next minimum peak value.

The search includes only measurement values to the right of the current marker position.

Prefix:

<n>	Window
<m>	Marker

CALCulate<n>:MARKer<m>:MINimum:NEXT

This command moves a marker to the next minimum peak value.

Prefix:

<n>	Window
<m>	Marker

CALCulate<n>:MARKer<m>:MINimum[:PEAK]

This command moves a marker to the minimum level.

If the marker is not yet active, the command first activates the marker.

Prefix:

<n>	Window
<m>	Marker

Manual operation: See "[Search Minimum](#)" on page 109

CALCulate<n>:MARKer<m>:MINimum:RIGHT

This command moves a marker to the next minimum peak value.

The search includes only measurement values to the right of the current marker position.

Prefix:

<n>	Window
-----	--------

<m> Marker

9.15.3.2 Positioning delta markers

The following commands position delta markers on the trace.

CALCulate<n>:DELTAmarker<m>:MAXimum:LEFT.....	258
CALCulate<n>:DELTAmarker<m>:MAXimum:NEXT.....	258
CALCulate<n>:DELTAmarker<m>:MAXimum[:PEAK].....	258
CALCulate<n>:DELTAmarker<m>:MAXimum:RIGHT.....	259
CALCulate<n>:DELTAmarker<m>:MINimum:LEFT.....	259
CALCulate<n>:DELTAmarker<m>:MINimum:NEXT.....	259
CALCulate<n>:DELTAmarker<m>:MINimum[:PEAK].....	259
CALCulate<n>:DELTAmarker<m>:MINimum:RIGHT.....	259

CALCulate<n>:DELTAmarker<m>:MAXimum:LEFT

This command moves a delta marker to the next positive peak value.

The search includes only measurement values to the left of the current marker position.

Suffix:

<n>	Window
<m>	Marker

CALCulate<n>:DELTAmarker<m>:MAXimum:NEXT

This command moves a marker to the next positive peak value.

Suffix:

<n>	1..n Window
<m>	1..n Marker

CALCulate<n>:DELTAmarker<m>:MAXimum[:PEAK]

This command moves a delta marker to the highest level.

If the marker is not yet active, the command first activates the marker.

Suffix:

<n>	Window
<m>	Marker

Manual operation: See "Peak Search" on page 109

CALCulate<n>:DELTamarker<m>:MAXimum:RIGHT

This command moves a delta marker to the next positive peak value on the trace.

The search includes only measurement values to the right of the current marker position.

Prefix:

<n>	Window
<m>	Marker

CALCulate<n>:DELTamarker<m>:MINimum:LEFT

This command moves a delta marker to the next minimum peak value.

The search includes only measurement values to the right of the current marker position.

Prefix:

<n>	Window
<m>	Marker

CALCulate<n>:DELTamarker<m>:MINimum:NEXT

This command moves a marker to the next minimum peak value.

Prefix:

<n>	Window
<m>	Marker

CALCulate<n>:DELTamarker<m>:MINimum[:PEAK]

This command moves a delta marker to the minimum level.

If the marker is not yet active, the command first activates the marker.

Prefix:

<n>	Window
<m>	Marker

Manual operation: See "[Search Minimum](#)" on page 109

CALCulate<n>:DELTamarker<m>:MINimum:RIGHT

This command moves a delta marker to the next minimum peak value.

The search includes only measurement values to the right of the current marker position.

Prefix:

<n>	Window
-----	--------

<m> Marker

9.16 Retrieving results

The following commands are required to retrieve the calculated pulse parameters.

Note that for each pulse result query you can specify for which pulse(s) you require results:

- **ALL**: for all pulses detected in the entire measurement
- **CURRent**: for all pulses in the current capture buffer
- **SELected**: only for the currently selected pulse

For each pulse result, you can query either the current value (default) or the following statistical values for the pulses detected in the capture buffer or the entire measurement:

- **AVER**: average of the results
- **MIN**: minimum of the results
- **MAX**: maximum of the results
- **SDEV**: standard deviation of the results

To determine how many pulses were considered for statistical evaluation, see [\[SENSe:\] PULSe:<ParameterGroup>:<Parameter>:COUNT?](#) on page 268.

• Retriving and storing trace data.....	260
• Retriving information on detected pulses.....	264
• Retriving parameter results.....	269
• Retriving limit results.....	319
• Exporting trace results to an ASCII file.....	321
• Exporting table results to an ASCII file.....	323

9.16.1 Retriving and storing trace data

In order to retrieve the trace results in a remote environment, use the following command:

TRACe<n>[:DATA]? <Trace>

This command queries the y-values in the selected result display. It is only available for graphical displays.

For each trace point, the measured or calculated value is returned. For the Magnitude Capture display, the maximum y-value for each trace point is returned.

The unit depends on the display and on the unit you have currently set.

Suffix:

<n> Window

Query parameters:

<Trace> TRACE1 | TRACE2 | TRACE3 | TRACE4 | TRACE5 | TRACE6
The trace number whose values are to be returned.

Usage: Query only

Manual operation: See "[Magnitude Capture](#)" on page 30
See "[Parameter Distribution](#)" on page 31
See "[Parameter Spectrum](#)" on page 32
See "[Pulse Frequency](#)" on page 34
See "[Pulse Magnitude](#)" on page 35
See "[Pulse Phase](#)" on page 36
See "[Pulse Phase \(Wrapped\)](#)" on page 36
See "[Pulse-Pulse Spectrum](#)" on page 38
See "[Result Range Spectrum](#)" on page 40

TRACe<n>[:DATA]:X? <Trace>

This remote control command returns the X values only for the trace in the selected result display. Depending on the type of result display and the scaling of the x-axis, this can be either the pulse number or a timestamp for each detected pulse in the capture buffer.

This command is only available for graphical displays, except for the Magnitude Capture display.

Suffix:

<n> 1..n
[Window](#)

Query parameters:

<Trace> TRACe1 | TRACe2 | TRACe3 | TRACe4 | TRACe5 | TRACe6
The trace number whose values are to be returned.

Return values:

<Data> <char_data>

Example: See [Chapter 9.19, "Programming example: pulse measurement"](#), on page 327.

Usage: Query only

TRACe:IQ:DATA?

This command initiates a measurement with the current settings and returns the captured data from I/Q measurements.

This command corresponds to:

`INIT:IMM; *WAI; :TRACe:IQ:DATA:MEMory?`

However, the TRACe:IQ:DATA? command is quicker in comparison.

Return values:

<Results> Measured voltage for I and Q component for each sample that has been captured during the measurement.

Default unit: V

Example:

```
TRAC:IQ:STAT ON
Enables acquisition of I/Q data
TRAC:IQ:SET NORM,10MHz,32MHz,EXT,POS,0,4096
Measurement configuration:
Sample Rate = 32 MHz
Trigger Source = External
Trigger Slope = Positive
Pretrigger Samples = 0
Number of Samples = 4096
FORMAT REAL,32
Selects format of response data
TRAC:IQ:DATA?
Starts measurement and reads results
```

Usage:

Query only

TRACe:IQ:DATA:MEMORY? [<OffsetSamples>,<NoOfSamples>]

This command queries the I/Q data currently stored in the capture buffer of the R&S FSMR3.

By default, the command returns all I/Q data in the memory. You can, however, narrow down the amount of data that the command returns using the optional parameters.

If no parameters are specified with the command, the entire trace data is retrieved.

In this case, the command returns the same results as [TRACe:IQ:DATA?](#). (Note, however, that the TRAC:IQ:DATA? command initiates a new measurement before returning the captured values, rather than returning the existing data in the memory.)

The command returns a comma-separated list of the measured values in floating point format (comma-separated values = CSV). The number of values returned is 2 * the number of complex samples.

The total number of complex samples is displayed in the channel bar in manual operation and can be calculated as:

<SampleRate> * <CaptureTime>

Query parameters:

<OffsetSamples> Selects an offset at which the output of data should start in relation to the first data. If omitted, all captured samples are output, starting with the first sample.

Range: 0 to <# of samples> – 1, with <# of samples> being the maximum number of captured values

*RST: 0

<NoOfSamples>	Number of samples you want to query, beginning at the offset you have defined. If omitted, all captured samples (starting at offset) are output.
Range:	1 to <# of samples> - <offset samples> with <# of samples> maximum number of captured values
*RST:	<# of samples>
Return values:	
<IQData>	<p>Measured value pair (I,Q) for each sample that has been recorded.</p> <p>The first half of the list contains the I values, the second half the Q values.</p> <p>The data format of the individual values depends on FORMAT [:DATA] on page 321.</p> <p>Default unit: V</p>
Example:	<pre>// Perform a single I/Q capture. INIT; *WAI // Determine output format (binary float32) FORMAT REAL, 32 // Read 1024 I/Q samples starting at sample 2048. TRAC:IQ:DATA:MEM? 2048,1024</pre>
Usage:	Query only

TRACe:IQ:DATA:RRAnge?

This command queries the I/Q data currently stored in the memory of the R&S FSMR3 for the defined result range (see [Chapter 9.12.2, "Defining the result range"](#), on page 171).

Return values:	
<IQData>	<p>Measured value pair (I,Q) for each sample that has been recorded.</p> <p>The data format depends on FORMAT [:DATA].</p> <p>Default unit: V</p>
Example:	TRAC:IQ:DATA:RRAN?
Usage:	Query only

MMEMemory:STORe<n>:TRACe <Trace>, <FileName>

This command exports trace data from the specified window to an ASCII file.

For details on the file format, see [Chapter A, "Reference: ASCII file export format"](#), on page 335.

Secure User Mode

In secure user mode, settings that are stored on the instrument are stored to volatile memory, which is restricted to 256 MB. Thus, a "memory limit reached" error can occur although the hard disk indicates that storage space is still available.

To store data permanently, select an external storage location such as a USB memory device.

For details, see "Protecting Data Using the Secure User Mode" in the "Data Management" section of the R&S FMSR3000 base unit user manual.

Suffix:

<n> [Window](#)

Parameters:

<Trace> Number of the trace to be stored

<FileName> String containing the path and name of the target file.

Example: MMEM:STOR1:TRAC 1, 'C:\TEST.ASC'

Stores trace 1 from window 1 in the file TEST.ASC.

Example: See [Chapter 9.19, "Programming example: pulse measurement"](#), on page 327.

Manual operation: See ["Export Trace to ASCII File"](#) on page 115

9.16.2 Retrieving information on detected pulses

The following commands return general information on the currently selected or all detected pulses.

[SENSe:]PULSe:COUNt?	266
[SENSe:]PULSe:EMODel:FBPTime:COUNT?	266
[SENSe:]PULSe:EMODel:FHPLevel:COUNT?	266
[SENSe:]PULSe:EMODel:FHPTime:COUNT?	266
[SENSe:]PULSe:EMODel:FLPLevel:COUNT?	266
[SENSe:]PULSe:EMODel:FLPTime:COUNT?	266
[SENSe:]PULSe:EMODel:FMPLevel:COUNT?	266
[SENSe:]PULSe:EMODel:FMPTime:COUNT?	266
[SENSe:]PULSe:EMODel:FTPLevel:COUNT?	266
[SENSe:]PULSe:EMODel:FTPTime:COUNT?	266

[SENSe:]PULSe:COUNt? <QueryRange>

Queries the number of detected pulses in the current capture buffer or the entire measurement.

Query parameters:

<QueryRange>	CURRent ALL
CURRent	Detected pulses in the current capture buffer
ALL	All detected pulses in the entire measurement.

Example: PULS:COUN?

Usage: Query only

Manual operation: See "Pulse Results" on page 37

[SENSe:]PULSe:TSIDelobe:PSLevel:COUNt? <QueryRange>

[SENSe:]PULSe:TSIDelobe:SDELay:COUNt? <QueryRange>

[SENSe:]PULSe:<ParameterGroup>:<Parameter>:COUNt? <QueryRange>

Returns the number of pulses considered for statistical evaluation of the specified result.

Query parameters:

<QueryRange> CURRent | ALL

CURRent

Detected pulses in the current capture buffer

ALL

All detected pulses in the entire measurement.

Return values:

<Result> integer

Number of pulses

Example:

PULS:POW:ADR:DB:COUN? CURR

Returns the number of pulses used to determine the statistical values for amplitude droop in dB in the current capture buffer.

Usage: Query only

Manual operation: See "[Pulse Statistics](#)" on page 39

[SENSe:]PULSe:ID? <QueryRange>

Queries the ids of the detected pulses, i.e. the unique index within the entire measurement (as opposed to [\[SENSe:\] PULSe:NUMBER?](#)).

Query parameters:

<QueryRange> CURRent | ALL

CURRent

Detected pulses in the current capture buffer

ALL

All detected pulses in the entire measurement.

Usage: Query only

[SENSe:]PULSe:NUMBER? <QueryRange>

Queries the detected pulse numbers, i.e. the index within the capture buffer (as opposed to [\[SENSe:\] PULSe:ID?](#)).

Query parameters:

<QueryRange> CURRent | ALL

CURRent

Detected pulses in the current capture buffer

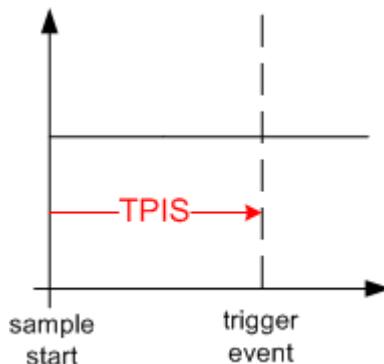

ALL

All detected pulses in the entire measurement.

Usage: Query only

TRACe:IQ:TPISample?

This command queries the time offset between the sample start and the trigger event (trigger point in sample = TPIS). Since the R&S FSMR3 usually samples with a much higher sample rate than the specific application actually requires, the trigger point determined internally is much more precise than the one determined from the (down-sampled) data in the application. Thus, the TPIS indicates the offset between the sample start and the actual trigger event.

This value can only be determined in triggered measurements using external or IFPower triggers, otherwise the value is 0.

Return values:

<TPIS> numeric value
Default unit: s

Example:

`TRAC:IQ:TPIS?`
Result for a sample rate of 1 MHz: between 0 and 1/1 MHz, i.e. between 0 and 1 µs (the duration of 1 sample).

Usage:

Query only

9.16.3 Retrieving parameter results

The following commands return the calculated pulse parameters.

For details on the individual parameters see [Chapter 3.1.2, "Power/amplitude parameters", on page 19](#).

To determine how many pulses were considered for statistical evaluation, see

[\[SENSe:\] PULSe:<ParameterGroup>:<Parameter>:COUNT?](#) on page 268.

 [SENSe:]PULSe:POWer:OVERshoot:DB:MINimum? <QueryRange>
 [SENSe:]PULSe:POWer:OVERshoot:DB:SDEViation? <QueryRange>

Returns the statistical value for the overshoot in dB over the specified pulses.

Query parameters:

<QueryRange> CURRent | ALL

CURRent

Detected pulses in the current capture buffer

ALL

All detected pulses in the entire measurement.

Return values:

<Result> <char_data>

Usage: Query only

[SENSe:]PULSe:POWer:OVERshoot[:PERCent]? <QueryRange>

Returns the overshoot in percent for the specified pulse(s).

Query parameters:

<QueryRange> SElected | CURRent | ALL

SESelected

Currently selected pulse

CURRent

Detected pulses in the current capture buffer

ALL

All detected pulses in the entire measurement.

Return values:

<Result> <char_data>

Usage: Query only

Manual operation: See "[Overshoot](#)" on page 22

[SENSe:]PULSe:POWer:OVERshoot[:PERCent]:AVERage? <QueryRange>
 [SENSe:]PULSe:POWer:OVERshoot[:PERCent]:MAXimum? <QueryRange>
 [SENSe:]PULSe:POWer:OVERshoot[:PERCent]:MINimum? <QueryRange>
 [SENSe:]PULSe:POWer:OVERshoot[:PERCent]:SDEViation? <QueryRange>

Returns the statistical value for the overshoot in percent over the specified pulses.

Query parameters:

<QueryRange> CURRent | ALL

CURRent

Detected pulses in the current capture buffer

ALL

All detected pulses in the entire measurement.

Return values:

<Result> <char_data>

Usage: Query only

[SENSe:]PULSe:POWer:PAVG? <QueryRange>

Returns the Peak-to-Average Tx Power Ratio for the specified pulse(s).

Query parameters:

<QueryRange> SElected | CURRent | ALL

SESelected

Currently selected pulse

CURRent

Detected pulses in the current capture buffer

ALL

All detected pulses in the entire measurement.

Return values:

<Result> <char_data>

Usage: Query only

Manual operation: See "[Peak-to-Average Tx Power Ratio](#)" on page 21

[SENSe:]PULSe:POWer:PAVG:AVERage? <QueryRange>

[SENSe:]PULSe:POWer:PAVG:MAXimum? <QueryRange>

[SENSe:]PULSe:POWer:PAVG:MINimum? <QueryRange>

Returns the statistical value for the chirp rate (per μ s) over the specified pulses.

Query parameters:

<QueryRange> CURRent | ALL

CURRent

Detected pulses in the current capture buffer

ALL

All detected pulses in the entire measurement.

Return values:

<Result> <char_data>

Usage: Query only

[SENSe:]PULSe:FREQuency:DEViation? <QueryRange>

Returns the frequency at the measurement point for the specified pulse(s).

Query parameters:

<QueryRange> SElected | CURRent | ALL

SElected

Currently selected pulse

CURRent

Detected pulses in the current capture buffer

ALL

All detected pulses in the entire measurement.

Return values:

<Result> <char_data>

Usage: Query only

Manual operation: See "[Frequency Deviation](#)" on page 24

[SENSe:]PULSe:FREQuency:DEViation:AVERage? <QueryRange>
[SENSe:]PULSe:FREQuency:DEViation:MAXimum? <QueryRange>

[SENSe:]PULSe:FREQuency:DEViation:MINimum? <QueryRange>
[SENSe:]PULSe:FREQuency:DEViation:SDEViation? <QueryRange>
Returns the statistical value for the chirp rate (per μ s) over the specified pulses.

Query parameters:

<QueryRange>	CURRent ALL
	CURRent Detected pulses in the current capture buffer
	ALL All detected pulses in the entire measurement.

Return values:

<Result>	<char_data>
----------	-------------

Usage: Query only

[SENSe:]PULSe:FREQuency:PERRor? <QueryRange>

Returns the peak frequency error for the specified pulse(s).

Query parameters:

<QueryRange>	SELected CURRent ALL
	SELected Currently selected pulse
	CURRent Detected pulses in the current capture buffer
	ALL All detected pulses in the entire measurement.

Return values:

<Result>	<char_data>
----------	-------------

Usage: Query only

Manual operation: See "[Frequency Error \(Peak\)](#)" on page 23

[SENSe:]PULSe:FREQuency:PERRor:AVERage? <QueryRange>

[SENSe:]PULSe:FREQuency:PERRor:MAXimum? <QueryRange>

[SENSe:]PULSe:FREQuency:PERRor:MINimum? <QueryRange>

[SENSe:]PULSe:FREQuency:PERRor:SDEViation? <QueryRange>

Returns the statistical value for the peak frequency error over the specified pulses.

Query parameters:

<QueryRange>	CURRent ALL
	CURRent Detected pulses in the current capture buffer
	ALL All detected pulses in the entire measurement.

Return values:

<Result>	<char_data>
----------	-------------

Usage: Query only

[SENSe:]PULSe:FREQuency:POInT? <QueryRange>

Returns the frequency at the measurement point for the specified pulse(s).

Query parameters:

<QueryRange> SESelected | CURREnt | ALL

SESelected

Currently selected pulse

CURREnt

Detected pulses in the current capture buffer

ALL

All detected pulses in the entire measurement.

Return values:

<Result> <char_data>

Usage: Query only

Manual operation: See "[Frequency](#)" on page 23

[SENSe:]PULSe:FREQuency:POInT:AVERage? <QueryRange>**[SENSe:]PULSe:FREQuency:POInT:MAXimum? <QueryRange>****[SENSe:]PULSe:FREQuency:POInT:MINimum? <QueryRange>****[SENSe:]PULSe:FREQuency:POInT:SDEviation? <QueryRange>**

Returns the statistical value for the phase deviation over the specified pulses.

Query parameters:

<QueryRange> CURREnt | ALL

CURREnt

Detected pulses in the current capture buffer

ALL

All detected pulses in the entire measurement.

Return values:

<Result> <char_data>

Usage: Query only

[SENSe:]PULSe:FREQuency:PPFReQuency? <QueryRange>

Returns the Pulse-Pulse Frequency Difference for the specified pulse(s).

Query parameters:

<QueryRange> SESelected | CURREnt | ALL

SESelected

Currently selected pulse

CURREnt

Detected pulses in the current capture buffer

ALL

All detected pulses in the entire measurement.

Return values:

<Result> <char_data>

Usage: Query only

Manual operation: See "[Pulse-Pulse Frequency Difference](#)" on page 23

[SENSe:]PULSe:FREQuency:PPFREquency:AVERage? <QueryRange>
[SENSe:]PULSe:FREQuency:PPFREquency:MAXimum? <QueryRange>
[SENSe:]PULSe:FREQuency:PPFREquency:MINimum? <QueryRange>
[SENSe:]PULSe:FREQuency:PPFREquency:SDEviation? <QueryRange>

Returns the statistical value for the Pulse-Pulse Frequency Difference over the specified pulses.

Query parameters:

<QueryRange> CURRent | ALL

CURRent

Detected pulses in the current capture buffer

ALL

All detected pulses in the entire measurement.

Return values:

<Result> <char_data>

Usage: Query only

[SENSe:]PULSe:FREQuency:RERRor? <QueryRange>

Returns the Frequency Error (RMS) for the specified pulse(s).

Query parameters:

<QueryRange> SESelected | CURRent | ALL

SESelected

Currently selected pulse

CURRent

Detected pulses in the current capture buffer

ALL

All detected pulses in the entire measurement.

Return values:

<Result> <char_data>

Usage: Query only

Manual operation: See "[Frequency Error \(RMS\)](#)" on page 23

[SENSe:]PULSe:FREQuency:RERRor:AVERage? <QueryRange>
[SENSe:]PULSe:FREQuency:RERRor:MAXimum? <QueryRange>

[SENSe:]PULSe:FREQuency:RERRor:MINimum? <QueryRange>
 [SENSe:]PULSe:FREQuency:RERRor:SDEViation? <QueryRange>

Returns the statistical value for the Frequency Error (RMS) over the specified pulses.

Query parameters:

<QueryRange> CURRent | ALL

CURRent

Detected pulses in the current capture buffer

ALL

All detected pulses in the entire measurement.

Return values:

<Result> <char_data>

Usage: Query only

9.16.3.4 Retrieving phase parameters

The following commands return the calculated pulse parameters.

For details on the individual parameters see [Chapter 3.1.4, "Phase parameters"](#), on page 24.

[SENSe:]PULSe:PHASe:DEViation?	302
[SENSe:]PULSe:PHASe:DEViation:AVERage?	302
[SENSe:]PULSe:PHASe:DEViation:MAXimum?	302
[SENSe:]PULSe:PHASe:DEViation:MINimum?	302
[SENSe:]PULSe:PHASe:DEViation:SDEViation?	302
[SENSe:]PULSe:PHASe:PERRor?	302
[SENSe:]PULSe:PHASe:PERRor:AVERage?	303
[SENSe:]PULSe:PHASe:PERRor:MAXimum?	303
[SENSe:]PULSe:PHASe:PERRor:MINimum?	303
[SENSe:]PULSe:PHASe:PERRor:SDEViation?	303
[SENSe:]PULSe:PHASe:POINT?	303
[SENSe:]PULSe:PHASe:POINT:AVERage?	303
[SENSe:]PULSe:PHASe:POINT:MAXimum?	303
[SENSe:]PULSe:PHASe:POINT:MINimum?	304
[SENSe:]PULSe:PHASe:POINT:SDEViation?	304

[SENSe:]PULSe:TIMing:DCYCLE:LIMit? <QueryRange>
[SENSe:]PULSe:TIMing:DRATio:LIMit? <QueryRange>
[SENSe:]PULSe:TIMing:FALL:LIMit? <QueryRange>
[SENSe:]PULSe:TIMing:OFF:LIMit? <QueryRange>
[SENSe:]PULSe:TIMing:PRF:LIMit? <QueryRange>
[SENSe:]PULSe:TIMing:PRI:LIMit? <QueryRange>
[SENSe:]PULSe:TIMing:PWIDth:LIMit? <QueryRange>
[SENSe:]PULSe:TIMing:RISE:LIMit? <QueryRange>

[SENSe:]PULSe:TIMing:SETTling:LIMit? <QueryRange>
 [SENSe:]PULSe:TIMing:TSTamp:LIMit? <QueryRange>

Returns the limit value for the specified parameter. For details on available parameters see [Chapter 3.1, "Pulse parameters", on page 15](#).

Query parameters:

<QueryRange>	SELected CURRent ALL
SELected	Currently selected pulse
CURRent	Detected pulses in the current capture buffer
ALL	All detected pulses in the entire measurement.

Return values:

<CheckResult> <char_data>

Example: SENS:PULS:POW:ON:LIM? CURR

Usage: Query only

Manual operation: See "[Timestamp](#)" on page 17

9.16.5 Exporting trace results to an ASCII file

Trace results can be exported to an ASCII file for further evaluation in other (external) applications.

FORMAT[:DATA].....	321
FORMAT:DExpOrt:DSEParator.....	322
FORMAT:DExpOrt:HEADer.....	322
FORMAT:DExpOrt:TRACes.....	323
FORMAT:DExpOrt:TStamp.....	323

FORMAT[:DATA] <Format>[, <BitLength>]

This command selects the data format that is used for transmission of trace data from the R&S FSMR3 to the controlling computer.

Note that the command has no effect for data that you send to the R&S FSMR3. The R&S FSMR3 automatically recognizes the data it receives, regardless of the format.

Parameters:

<Format>	ASCii ASCii format, separated by commas. This format is almost always suitable, regardless of the actual data format. However, the data is not as compact as other formats can be.
----------	---

REAL

Floating-point numbers (according to IEEE 754) in the "definite length block format".

The format setting **REAL** is used for the binary transmission of trace data.

<BitLength>	Length in bits for floating-point results
16	16-bit floating-point numbers. Compared to REAL , 32 format, half as many numbers are returned.
32	32-bit floating-point numbers For I/Q data, 8 bytes per sample are returned for this format setting.
64	64-bit floating-point numbers Compared to REAL , 32 format, twice as many numbers are returned.

Example: FORM REAL, 32

FORMAT:DEXPort:DSEParator <Separator>

This command selects the decimal separator for data exported in ASCII format.

Parameters:

<Separator>	POINt COMMa
COMMa	Uses a comma as decimal separator, e.g. 4,05.
POINt	Uses a point as decimal separator, e.g. 4.05.
*RST:	*RST has no effect on the decimal separator. Default is POINt.

Example: FORM:DEXP:DSEP POIN
Sets the decimal point as separator.

Manual operation: See "[Decimal Separator](#)" on page 114

FORMAT:DEXPort:HEADer <State>

If enabled, additional instrument and measurement settings are included in the header of the export file for result data. If disabled, only the pure result data from the selected traces and tables is exported.

Parameters:

<State>	ON OFF 0 1
*RST:	1

Manual operation: See "[Include Instrument & Measurement Settings](#)" on page 114

FORMAT:DEXPort:TRACes <Selection>

This command selects the data to be included in a data export file (see [MMEMory:STORe<n>:TRACe](#) on page 263).

Parameters:

<Selection>	SINGle ALL
	SINGle
	Only a single trace is selected for export, namely the one specified by the MMEMory:STORe<n>:TRACe command.
	ALL
	Selects all active traces and result tables (e.g. "Result Summary", marker peak list etc.) in the current application for export to an ASCII file.
	The <trace> parameter for the MMEMory:STORe<n>:TRACe command is ignored.
	*RST: SINGle

Manual operation: See "[Export all Traces and all Table Results](#)" on page 114

FORMAT:DEXPort:TStamp <State>

Turns on display of absolute time stamp for table export.

Parameters:

<State>	ON OFF
	*RST: OFF

Example: FORMAT:DEXPort:TStamp ON

Manual operation: See "[Absolute Time Stamp](#)" on page 117

9.16.6 Exporting table results to an ASCII file

Table results can be exported to an ASCII file for further evaluation in other (external) applications.

Useful commands for exporting table results described elsewhere:

- [FORMAT:DEXPort:DSEPARATOR](#) on page 322
- [Chapter 9.12.8, "Configuring the statistics and parameter tables"](#), on page 208

Remote commands exclusive to exporting table results

MMEMory:STORe<n>:TABLE.....	323
MMEMory:STORe<n>:TABLE:LIMit.....	324

MMEMory:STORe<n>:TABLE <Columns>, <FileName>

This command exports result table data from the specified window to an ASCII file (.DAT).

For details on the file format see [Chapter A, "Reference: ASCII file export format"](#), on page 335.

Suffix:

<n> [Window](#)

Setting parameters:

<Columns> Columns to be stored in file

SElected

Export only the selected (visible) table columns

ALL

Export all table columns (all possible measured parameters)

*RST: SEL

<FileName> String containing the path and name of the target file.

Example:

MMEM:STOR1:TABL SEL, 'TEST.DAT'

Stores the selected columns from the result table in window 1 in the file TEST.DAT.

Example:

See [Chapter 9.19, "Programming example: pulse measurement"](#), on page 327.

Usage:

Setting only

Manual operation:

See "[Export table to ASCII File](#)" on page 115

See "[Columns to Export](#)" on page 116

MMEMemory:STORe<n>:TABLE:LIMit <Columns>, <Filename>

This command stores the table columns (all or selected), along with limit check results in a file with ASCII format. The decimal separator (decimal point or comma) for floating-point numerals contained in the file is defined with the [FORMAT:DEXPort:DSEPator](#) command.

Suffix:

<n> 1..n
[Window](#)

Setting parameters:

<Columns> SESelected | ALL

SESelected

Only the currently visible columns in the result display are exported.

ALL

All columns, including currently hidden ones, for the result display are exported.

<Filename> String containing the path and name of the file.

Usage:

Setting only

Manual operation: See "[Export Limits](#)" on page 116

9.17 Retrieving marker results

The following commands are required to retrieve marker results.

Useful commands for retrieving marker results described elsewhere:

- [CALCulate<n>:DELTamarker<m>:X](#) on page 253
- [CALCulate<n>:MARKer<m>:X](#) on page 250

Remote commands exclusive to retrieving marker results:

CALCulate<n>:DELTamarker<m>:X:RELative?	325
CALCulate<n>:DELTamarker<m>:Y?	325
CALCulate<n>:MARKer<m>:Y?	325

CALCulate<n>:DELTamarker<m>:X:RELative?

This command queries the relative position of a delta marker on the x-axis.

If necessary, the command activates the delta marker first.

Suffix:

<n>	Window
<m>	Marker

Return values:

<Position> Position of the delta marker in relation to the reference marker.

Example:

`CALC:DELT3:X:REL?`

Outputs the frequency of delta marker 3 relative to marker 1 or relative to the reference position.

Usage:

Query only

CALCulate<n>:DELTamarker<m>:Y?

Queries the result at the position of the specified delta marker.

Suffix:

<n>	1..n
<m>	1..n

Return values:

<Result> Result at the position of the delta marker.
The unit is variable and depends on the one you have currently set.
Default unit: DBM

Usage:

Query only

CALCulate<n>:MARKer<m>:Y?

Queries the result at the position of the specified marker.

Suffix:

<n> 1..n

<m> 1..n

Return values:

<Result> Default unit: DBM

Usage: Query only**Manual operation:** See "Marker Table" on page 31

9.18 Deprecated commands

CALCulate<n>:TRACe<t>[:VALue].....	326

CALCulate<n>:TRACe<t>[:VALue] <Detector>

Defines which signal component (I/Q) is evaluated in which trace for the **Pulse I and Q** result display. This setting is not available for any other result displays. By default, the I component is displayed by trace 1, while the Q component is displayed by trace 4.

Suffix:

<n> Window

<t> Trace

Parameters:

<Detector> ITIMe | QTIMe

ITIMe

The I component is evaluated by the selected trace.

QTIMe

The Q component is evaluated by the selected trace.

Example:

CALC2:TRAC2 QTIM

Trace 2 in window 2 evaluates the Q component of the signal.

Manual operation: See "Evaluation" on page 111

DISPlay[:WINDOW<n>]:TYPE <ResultType>

Note that this command is maintained for compatibility reasons only. Use the LAYout commands for new remote control programs (see [Chapter 9.13.2, "Working with windows in the display", on page 236](#)).

Suffix:

<n>	1..n
	Window

Parameters:

<ResultType>	MCAPture PDIStrib PRESults PSTatistics PTRend PSPectrum PPSPectrum RRSPectrum PMAGnitude PPHase PPWRapped PFREquency MTABle CMCCapture CPMMagnitude PPERror PFERror PIAQ STABILITY SWATerfall

A Reference: ASCII file export format

Trace data can be exported to a file in ASCII format for further evaluation in other applications

The file consists of the header containing important scaling parameters and a data section containing the trace data.

Generally, the format of this ASCII file can be processed by spreadsheet calculation programs, e.g. MS-Excel. Different language versions of evaluation programs may require a different handling of the decimal point. Thus you can define the decimal separator to be used (decimal point or comma, see "[Decimal Separator](#)" on page 114).

The data of the file header consist of three columns, each separated by a semicolon: parameter name; numeric value; basic unit. The data section starts with the two lines containing the measured parameter names and units, followed by the measured data in multiple columns (depending on measurement) which are also separated by a semicolon.

Table A-1: ASCII file format for table export

File contents	Description
Header data	
Type;R&S FSMR3;	Instrument model
Version;5.00;	Firmware version
Date;01.Oct 2006;	Date of data set storage
Mode;PULSE;	Application
Center Freq;55000;Hz	Center frequency
Freq Offset;0;Hz	Frequency offset
Meas BW;10000000,Hz	Measurement Bandwidth
Filter Type;GAUS;	Measurement filter type can be Gaussian (GAUS) or flat (FLAT)
Ref Level;-30;dBm	Reference level
Level Offset;0;dB	Level offset
Rf Att;20;dB	Input attenuation
EI Att;2.0;dB	Electrical attenuation
SWT;0.005;s	Sweep time (measurement time)
Sweep Count;20;	Number of sweeps set
Preamplifier;OFF	Preamplifier status
Top Pos.;CENT;	Top (100%) level position can be Edge (EDGE) or Center (CENT)
Top Alg.;MEDI	Top level measurement algorithm can be Median (MEDI) or Mean (MEAN)
Ripple Portion;50;%	Portion of pulse top where ripple is measured

File contents	Description
High Level;90;%V	High (distal) threshold level
Mid Level;50;%V	Mid (mesial) threshold level
Low Level;10;%V	Low (proximal) threshold level
Boundary;3;%V	The (top +/-) boundary level
Point Ref;CENT;	Measurement point reference can be Rise (RISE), Center (CENT) or Fall (FALL)
Point Offset;0;s	Measurement point offset
Range Ref;CENT;	Measurement range reference can be Center (CENT) or Edge (EDGE)
Range Length;75;%	Measurement range length (only valid for "Range Ref;:CENT")
Range Offset Rise;0;s	Measurement range offset from rising edge (only valid for "Range Ref;:EDGE")
Range Offset Fall;0;s	Measurement range offset from falling edge (only valid for "Range Ref;:EDGE")
Data section	
Values; 1001;	Number of rows of measured values in the table
ID;Pulse No.;Rise Time;...	Pulse parameter names
Unit;s;...	Unit of pulse parameters
1;1;10.0e-9;... 2;2;10.1e-9;... 1;3;9.9e-9;... ...;...;...;...	Measured values: <ID>, <Pulse No.>, <Param 1>, ... , <Param N>

B Effects of large gauss filters

As an alternative to the nearly rectangular "flat" measurement filters, the R&S FSMR3 also provides Gaussian filters. Gaussian filters have an optimized settling behavior, which avoids overshoot distortions in time domain data.

However, for Gaussian filters whose -3dB bandwidth is large compared to the maximum I/Q bandwidth, the ideal Gaussian filter shape would exceed the maximum I/Q bandwidth at its outer edges. Thus, the actual filter only follows the ideal Gaussian filter shape in the inner range of the set I/Q bandwidth. At a certain frequency offset it must deviate from the ideal Gauss filter and drop off faster.

Gaussian filters with large -3dB bandwidths (<10 MHz)

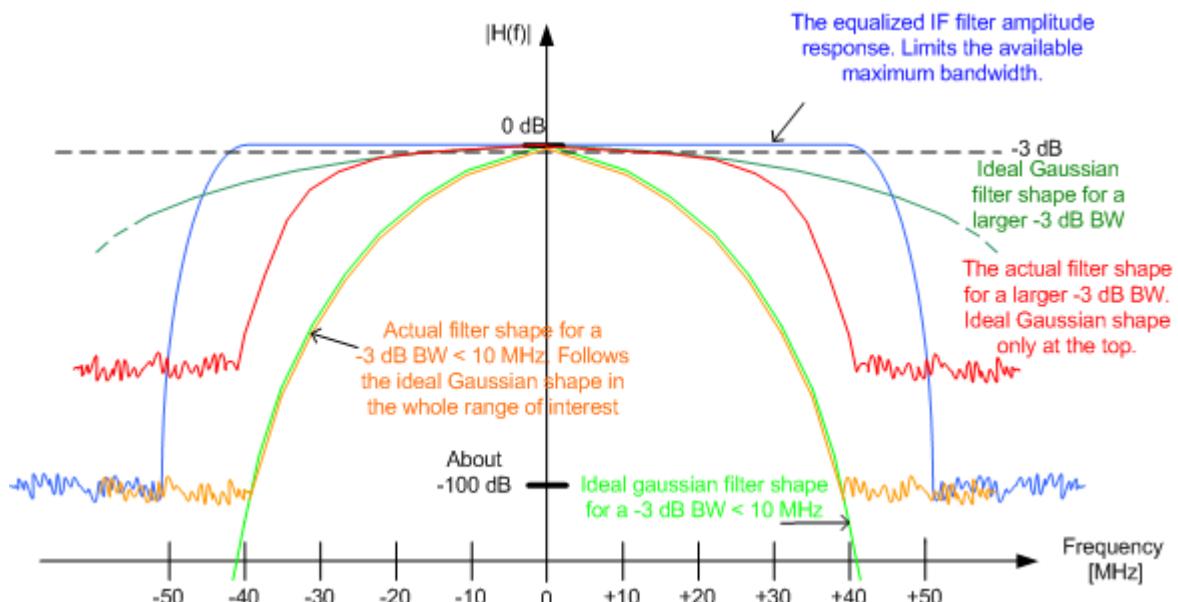

Table B-1: Gauss filters with large -3 dB bandwidths

-3 dB BW	Max. freq. with Gaussian shape	Attenuation at max. freq.	Attenuation at I/Q range edge (± 40 MHz)
40 MHz	+/-24 MHz	4 dB	> 60 dB
28 MHz	+/-22 MHz	7 dB	> 65 dB
18 MHz	+/-28 MHz	29 dB	> 100 dB
10 MHz	+/-25 MHz	75 dB	> 100 dB

C I/Q data file format (iq-tar)

I/Q data is packed in a file with the extension .iq.tar. An iq-tar file contains I/Q data in binary format together with meta information that describes the nature and the source of data, e.g. the sample rate. The objective of the iq-tar file format is to separate I/Q data from the meta information while still having both inside one file. In addition, the file format allows you to include user-specific data and to preview the I/Q data in a web browser (not supported by all web browsers).

The iq-tar container packs several files into a single .tar archive file. Files in .tar format can be unpacked using standard archive tools (see http://en.wikipedia.org/wiki/Comparison_of_file_archivers) available for most operating systems. The advantage of .tar files is that the archived files inside the .tar file are not changed (not compressed) and thus it is possible to read the I/Q data directly within the archive without the need to unpack (untar) the .tar file first.

Sample iq-tar files

Some sample iq-tar files are provided in the C:\R_S\INSTR\USER/Demo/ directory on the R&S FMSR3.

An application note on converting Rohde & Schwarz I/Q data files is available from the Rohde & Schwarz website:

[1EF85: Converting R&S I/Q data files](#)

Contained files

An iq-tar file must contain the following files:

- **I/Q parameter XML file**, e.g. xyz.xml
Contains meta information about the I/Q data (e.g. sample rate). The filename can be defined freely, but there must be only one single I/Q parameter XML file inside an iq-tar file.
- **I/Q data binary file**, e.g. xyz.complex.float32
Contains the binary I/Q data of all channels. There must be only one single I/Q data binary file inside an iq-tar file.

Optionally, an iq-tar file can contain the following file:

- **I/Q preview XSLT file**, e.g. open_IqTar_xml_file_in_web_browser.xslt
Contains a stylesheet to display the I/Q parameter XML file and a preview of the I/Q data in a web browser (not supported by all web browsers).
A sample stylesheet is available at http://www.rohde-schwarz.com/file/open_IqTar_xml_file_in_web_browser.xslt.
- **I/Q parameter XML file specification**..... 339
- **I/Q data binary file**..... 343

C.1 I/Q parameter XML file specification

The content of the I/Q parameter XML file must comply with the XML schema `RsiqTar.xsd` available at: <http://www.rohde-schwarz.com/file/RsiqTar.xsd>.

In particular, the order of the XML elements must be respected, i.e. iq-tar uses an "ordered XML schema". For your own implementation of the iq-tar file format make sure to validate your XML file against the given schema.

The following example shows an I/Q parameter XML file. The XML elements and attributes are explained in the following sections.

Sample I/Q parameter XML file: xyz.xml

```
<?xml version="1.0" encoding="UTF-8"?>
<?xmlstylesheet type="text/xsl"
  href="open_IqTar_xml_file_in_web_browser.xslt"?>
<RS_IQ_TAR_FileFormat fileFormatVersion="1"
  xsi:noNamespaceSchemaLocation="RsiqTar.xsd"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance">
  <Name>R&S FSMR3</Name>
  <Comment>Here is a comment</Comment>
  <DateTime>2011-01-24T14:02:49</DateTime>
  <Samples>68751</Samples>
  <Clock unit="Hz">6.5e+006</Clock>
  <Format>complex</Format>
  <DataType>float32</DataType>
  <ScalingFactor unit="V">1</ScalingFactor>
  <NumberOfChannels>1</NumberOfChannels>
  <DataFilename>xyz.complex.float32</DataFilename>
  <UserData>
    <UserDefinedElement>Example</UserDefinedElement>
  </UserData>
  <PreviewData>...</PreviewData>
</RS_IQ_TAR_FileFormat>
```

C.1.1 Minimum data elements

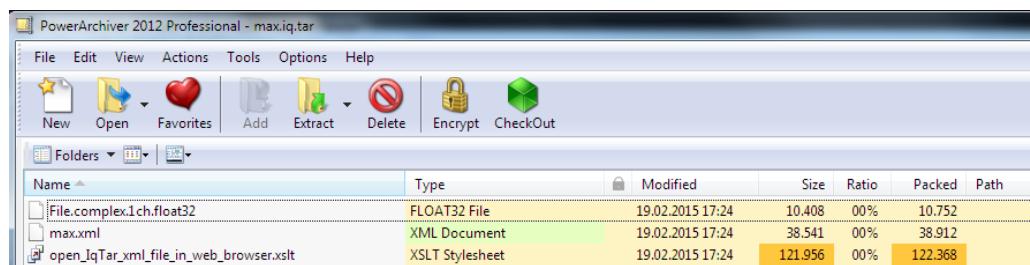

The following data elements are the minimum required for a valid iq-tar file. They are always provided by an iq-tar file export from a Rohde & Schwarz product. If not specified otherwise, it must be available in all iq-tar files used to import data to a Rohde & Schwarz product.

Element	Possible Values	Description
<RS_IQ_TAR_FileFormat>	-	The root element of the XML file. It must contain the attribute <code>fileFormatVersion</code> that contains the number of the file format definition.
<Name>	string	Optional: describes the device or application that created the file.
<Comment>	string	Optional: contains text that further describes the contents of the file.
<DateTime>	yyyy-mm-ddThh:mm:ss	Contains the date and time of the creation of the file. Its type is <code>xs:dateTime</code> (see <code>RsiqTar.xsd</code>).
<Samples>	integer	Contains the number of samples of the I/Q data. For multi-channel signals all channels have the same number of samples. One sample can be: <ul style="list-style-type: none"> A complex number represented as a pair of I and Q values A complex number represented as a pair of magnitude and phase values A real number represented as a single real value See also <Format> element.
<Clock>	double	Contains the clock frequency in Hz, i.e. the sample rate of the I/Q data. A signal generator typically outputs the I/Q data at a rate that equals the clock frequency. If the I/Q data was captured with a signal analyzer, the signal analyzer used the clock frequency as the sample rate. The attribute <code>unit</code> must be set to "Hz".
<Format>	complex real polar	Specifies how the binary data is saved in the I/Q data binary file (see <DataFilename> element). Every sample must be in the same format. The format can be one of the following: <ul style="list-style-type: none"> <code>complex</code>: Complex number in cartesian format, i.e. I and Q values interleaved. I and Q are unitless <code>real</code>: Real number (unitless) <code>polar</code>: Complex number in polar format, i.e. magnitude (unitless) and phase (rad) values interleaved. Requires <code>DataType = float32</code> or <code>float64</code>
<DataType>	int8 int16 int32 float32 float64	Specifies the binary format used for samples in the I/Q data binary file (see <DataFilename> element and Chapter C.2, "I/Q data binary file", on page 343). The following data types are allowed: <ul style="list-style-type: none"> <code>int8</code>: 8 bit signed integer data <code>int16</code>: 16 bit signed integer data <code>int32</code>: 32 bit signed integer data <code>float32</code>: 32 bit floating point data (IEEE 754) <code>float64</code>: 64 bit floating point data (IEEE 754)
<ScalingFactor>	double	Optional: describes how the binary data can be transformed into values in the unit Volt. The binary I/Q data itself has no unit. To get an I/Q sample in the unit Volt the saved samples have to be multiplied by the value of the <ScalingFactor>. For polar data only the magnitude value has to be multiplied. For multi-channel signals the <ScalingFactor> must be applied to all channels. The attribute <code>unit</code> must be set to "V". The <ScalingFactor> must be > 0. If the <ScalingFactor> element is not defined, a value of 1 V is assumed.

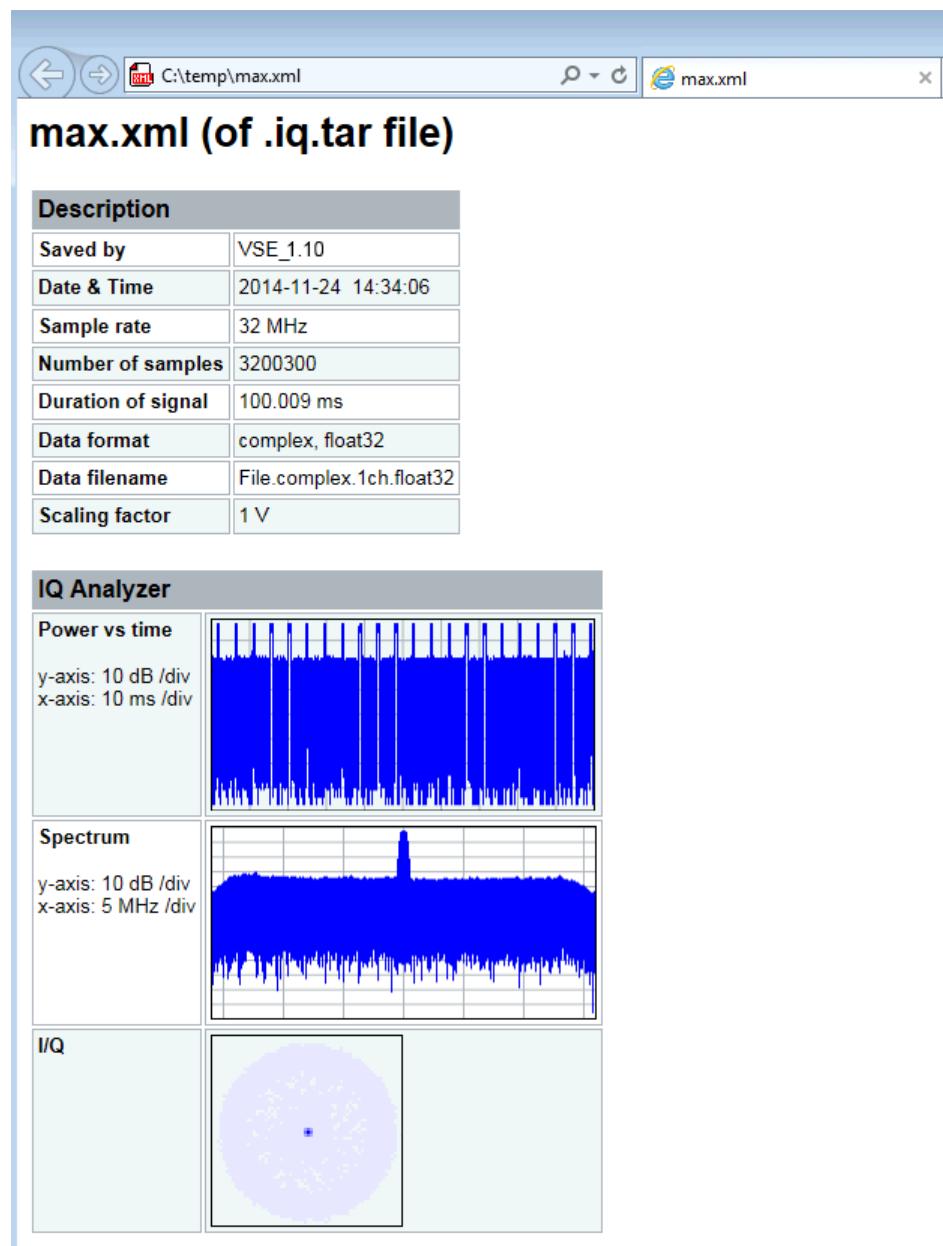

Element	Possible Values	Description
<NumberOfChannels>	integer	Optional: specifies the number of channels, e.g. of a MIMO signal, contained in the I/Q data binary file. For multi-channels, the I/Q samples of the channels are expected to be interleaved within the I/Q data file (see Chapter C.2, "I/Q data binary file", on page 343). If the <NumberOfChannels> element is not defined, one channel is assumed.
<DataFilename>		<p>Contains the filename of the I/Q data binary file that is part of the iq-tar file.</p> <p>It is recommended that the filename uses the following convention:</p> <ul style="list-style-type: none"> • <xyz> = a valid Windows file name • <Format> = complex, polar or real (see Format element) • <Channels> = Number of channels (see NumberOfChannels element) • <Type> = float32, float64, int8, int16, int32 or int64 (see DataType element) <p>Examples:</p> <ul style="list-style-type: none"> • xyz.complex.1ch.float32 • xyz.polar.1ch.float64 • xyz.real.1ch.int16 • xyz.complex.16ch.int8
<UserData>	xml	Optional: contains user, application or device-specific XML data which is not part of the iq-tar specification. This element can be used to store additional information, e.g. the hardware configuration. User data must be valid XML content.
<PreviewData>	xml	Optional: contains further XML elements that provide a preview of the I/Q data. The preview data is determined by the routine that saves an iq-tar file (e.g. R&S FSMR3). For the definition of this element refer to the RsIqTar.xsd schema . Note that the preview can be only displayed by current web browsers that have JavaScript enabled and if the XSLT stylesheet open_IqTar_xml_file_in_web_browser.xslt is available.

C.1.2 Example

The following example demonstrates the XML description inside the iq-tar file. Note that this preview is not supported by all web browsers.

Open the xml file in a web browser, e.g. Microsoft Internet Explorer. If the stylesheet [open_IqTar_xml_file_in_web_browser.xslt](#) is in the same directory, the web browser displays the xml file in a readable format.

```

<?xml version="1.0" encoding="UTF-8"?>
<?xml-stylesheet type="text/xsl" href="open_IqTar_xml_file_in_web_browser.xslt"?>
<RS_IQ_TAR_FileFormat fileFormatVersion="1" xsi:noNamespaceSchemaLocation=
"http://www.rohde-schwarz.com/file/RsIqTar.xsd" xmlns:xsi=
"http://www.w3.org/2001/XMLSchema-instance">
  <Name>VSE_1.10a 29 Beta</Name>
  <Comment></Comment>
  <DateTime>2015-02-19T15:24:58</DateTime>
  <Samples>1301</Samples>
  <Clock unit="Hz">32000000</Clock>
  <Format>complex</Format>
  <DataType>float32</DataType>

```

```

<ScalingFactor unit="V">1</ScalingFactor>
<NumberOfChannels>1</NumberOfChannels>
<DataFilename>File.complex.1ch.float32</DataFilename>

<UserData>
  <RohdeSchwarz>
    <DataImportExport_MandatoryData>
      <ChannelNames>
        <ChannelName>IQ Analyzer</ChannelName>
      </ChannelNames>
      <CenterFrequency unit="Hz">0</CenterFrequency>
    </DataImportExport_MandatoryData>
    <DataImportExport_OptionalData>
      <Key name="Ch1_NumberOfPostSamples">150</Key>
      <Key name="Ch1_NumberOfPreSamples">150</Key>
    </DataImportExport_OptionalData>
  </RohdeSchwarz>
</UserData>

</RS_IQ_TAR_FileFormat>

```

Example: ScalingFactor

Data stored as int16 and a desired full scale voltage of 1 V

$$\text{ScalingFactor} = 1 \text{ V} / \text{maximum int16 value} = 1 \text{ V} / 2^{15} = 3.0517578125 \text{e-5 V}$$

Scaling Factor	Numerical value	Numerical value x ScalingFactor
Minimum (negative) int16 value	$-2^{15} = -32768$	-1 V
Maximum (positive) int16 value	$2^{15}-1=32767$	0.999969482421875 V

C.2 I/Q data binary file

The I/Q data is saved in binary format according to the format and data type specified in the XML file (see `<Format>` element and `<DataType>` element). To allow reading and writing of streamed I/Q data, all data is interleaved, i.e. complex values are interleaved pairs of I and Q values and multi-channel signals contain interleaved (complex) samples for channel 0, channel 1, channel 2 etc. If the `<NumberOfChannels>` element is not defined, one channel is presumed.

Example: Element order for real data (1 channel)

```

I[0],                                // Real sample 0
I[1],                                // Real sample 1
I[2],                                // Real sample 2
...

```

Example: Element order for complex cartesian data (1 channel)

```
I[0], Q[0],          // Real and imaginary part of complex sample 0
I[1], Q[1],          // Real and imaginary part of complex sample 1
I[2], Q[2],          // Real and imaginary part of complex sample 2
...

```

Example: Element order for complex polar data (1 channel)

```
Mag[0], Phi[0],      // Magnitude and phase part of complex sample 0
Mag[1], Phi[1],      // Magnitude and phase part of complex sample 1
Mag[2], Phi[2],      // Magnitude and phase part of complex sample 2
...

```

Example: Element order for complex cartesian data (3 channels)

Complex data: I[channel no][time index], Q[channel no][time index]

```
I[0][0], Q[0][0],      // Channel 0, Complex sample 0
I[1][0], Q[1][0],      // Channel 1, Complex sample 0
I[2][0], Q[2][0],      // Channel 2, Complex sample 0

I[0][1], Q[0][1],      // Channel 0, Complex sample 1
I[1][1], Q[1][1],      // Channel 1, Complex sample 1
I[2][1], Q[2][1],      // Channel 2, Complex sample 1

I[0][2], Q[0][2],      // Channel 0, Complex sample 2
I[1][2], Q[1][2],      // Channel 1, Complex sample 2
I[2][2], Q[2][2],      // Channel 2, Complex sample 2
...

```

Example: Element order for complex cartesian data (1 channel)

This example demonstrates how to store complex cartesian data in float32 format using MATLAB®.

```
% Save vector of complex cartesian I/Q data, i.e. iqiqiq...
N = 100
iq = randn(1,N)+1j*randn(1,N)
fid = fopen('xyz.complex.float32','w');
for k=1:length(iq)
    fwrite(fid,single(real(iq(k))),'float32');
    fwrite(fid,single(imag(iq(k))),'float32');
end
fclose(fid)
```

Example: PreviewData in XML

```
<PreviewData>
    <ArrayOfChannel length="1">
        <Channel>
            <PowerVsTime>
                <Min>
```

```
<ArrayOfFloat length="256">
  <float>-134</float>
  <float>-142</float>
  ...
  <float>-140</float>
</ArrayOfFloat>
</Min>
<Max>
  <ArrayOfFloat length="256">
    <float>-70</float>
    <float>-71</float>
    ...
    <float>-69</float>
  </ArrayOfFloat>
</Max>
</PowerVsTime>
<Spectrum>
<Min>
  <ArrayOfFloat length="256">
    <float>-133</float>
    <float>-111</float>
    ...
    <float>-111</float>
  </ArrayOfFloat>
</Min>
<Max>
  <ArrayOfFloat length="256">
    <float>-67</float>
    <float>-69</float>
    ...
    <float>-70</float>
    <float>-69</float>
  </ArrayOfFloat>
</Max>
</Spectrum>
<IQ>
  <Histogram width="64" height="64">0123456789...0</Histogram>
</IQ>
</Channel>
</ArrayOfChannel>
</PreviewData>
```
